Globalization of Mobile and Wireless Communications Ramjee Prasad, Sudhir Dixit, Richard van Nee, Tero Ojanpera, 2010-11-11 Globalization of Mobile and Wireless Communications is a collection of cutting-edge research in mobile and wireless communications with impact on developments as far forward as 2020 and beyond. The book draws upon the insights and performed research work of leading experts in the field. Topics of discussion are related but not limited to spectrum-efficient radio interface technologies, enabling technologies for reconfigurability, wireless sensor networks, cognitive networks, coherent wireless transmission, algorithmic design, middleware for novel services and applications. The material has been edited to provide a vision for the future of mobile and wireless, towards a dynamic communication system that breaks down the barriers between communications means; and evolves and integrates business models and culture to match the technological evolution. In addition, strategies on how to overcome the technological challenges for achieving that vision are also outlined.

The Mobile Audience Martin Rieser, 2011 The convergence of mobile technologies and ubiquitous computing is creating a world where information-rich environments may be mapped directly onto urban topologies. This book tracks the history and genesis of locative and wearable media and the ground-breaking work of pioneer artists in the field. It examines changing concepts of space and place for a wide range of traditional disciplines ranging from Anthropology, Sociology, Fine Art and Architecture to Cultural and Media Studies, Fashion and Graphic design. Mobile and Pervasive media are beginning to proliferate in the landscape of computer mediated interaction in public space through the emergence

of smartphone technologies such as the iPhone, cloud computing extended wifi services and the semantic web in cities. These dispersed forms of interaction raise a whole series of questions on the nature of narrative and communication, particularly in relation to an audience's new modes of mobile participation and reception. These issues are explored through a series of focused essays by leading theorists, seminal case studies and practitioner interviews with artists at the cutting edge of these technologies, who are extending the potential of the medium to enhance and critique technological culture. By emphasizing the role of the audience in this nomadic environment, the collection traces the history and development of 'ambulant' artistic practice in this new domain, creating an essential handbook for those wishing to understand the dominant global technology of the 21st Century and its implications for Art, Culture and Audience.

Mobile Technologies in Educational Organizations Forkosh Baruch, Alona, Meishar Tal, Hagit, 2019-03-15 The use of mobile technology for learning in organizations and the workplace is spreading widely with the development of infrastructure and devices that allow ubiquitous learning and

training. Since learning, teaching, and training in a mobile-saturated environment is a developing field, implications for a combined overview of these topics may be beneficial both for research and practice in the broader view of a user's lifespan. *Mobile Technologies in Educational Organizations* is a collection of innovative research on the methods and applications of mobile technologies in learning and training and explores best practices of mobile learning in organizations and the workplace. While highlighting topics including ethics, informal education, and virtual reality, this book is ideally designed for teachers, administrators, principals, higher education professionals, instructional designers, curriculum developers, managers, researchers, and students.

Mobile Technologies and Handheld Devices for Ubiquitous Learning: Research and Pedagogy Ng, Wan, 2010-08-31 *Mobile Technologies and Handheld Devices for Ubiquitous Learning: Research and Pedagogy* provides readers with a rich collection of research-informed ideas for integrating mobile technologies into learning and teaching. Each chapter looks critically at the issues, related benefits and limitations of learning ubiquitously within the context of the research reported. New and emerging

technologies present challenges for education causing educators to have to rethink pedagogy, boundaries and curriculum if they continue to embrace mobile technologies in their teaching.

Mobile Media Jo Groebel,Eli M. Noam,Valerie Feldmann,2006-08-15 The proliferation of mobile

media in recent years is an international phenomenon, with billions of devices sold annually. Mobile communications are now moving beyond individualized voice to mass media content--text, voice, sound, images, and even video. This will create new types of content that allow media companies and users to interact in new ways. There is a strong interest from the media and telecom industries in what manner of applications and content can be distributed in that fashion, and at what cost. To answer these questions, the book provides 18 chapters from internationally renowned authors. They identify likely types of content such as news, entertainment, peer-to-peer, and location-specific information; evaluate the economics, business models, and payment mechanisms necessary to support these media; and cover policy dimensions such as copyright, competitiveness, and access rights for content providers. This volume takes the reader through the various elements that need to be considered in the development of third generation (3G) content, and explains pitfalls and barriers. The result is a volume of interest to business professionals, academics, and policy makers. The book is international in focus and a glossary of terms is provided. There are few publications available which give an

overview of this rapidly changing field.
