Springer Handbook of Optical Networks Biswanath Mukherjee, Ioannis Tomkos, Massimo Tornatore, Peter Winzer, Yongli Zhao, 2020-10-15 This handbook is an authoritative, comprehensive reference on optical networks, the backbone of today's communication and information society. The book reviews the many underlying technologies that enable the global optical communications infrastructure, but also explains current research trends targeted towards continued capacity scaling and enhanced networking flexibility in support of an unabated traffic growth fueled by ever-emerging new applications. The book is divided into four parts: Optical Subsystems for Transmission and Switching, Core Networks, Datacenter and Super-Computer Networking, and Optical Access and Wireless Networks. Each chapter is written by world-renown experts that represent academia, industry, and international government and regulatory agencies. Every chapter provides a complete picture of its field, from entry-level information to a snapshot of the respective state-of-the-art technologies to emerging research trends, providing something useful for the novice who wants to get familiar with the field to the expert who wants to get a concise view of future trends.

OECD Urban Policy Reviews, Chile 2013 OECD,2013-04-29 This report examines the economic and socio-economic trends in Chile's urban areas; it analyses four policy areas with significant implications for national urban programming, and it examines possible approaches for revitalising the urban governance.

Soil Biology Guide Daniel L. Dindal,1991-01-16 A comprehensive study of the biology, taxonomy, and ecology of each of the soil biotic groups. The first chapter presents an ecological approach to soil studies. The remaining 42 chapters provide specific information on each of the taxonomic groupings. Contains illustrated identification keys to each group. Some keys go by functional morphological delineations; others lead the reader to classical identification at family, genus, or species levels. Some incorporate descriptions of new genera and species. Especially useful for the study of mesic, xeric, and hydric terrestrial sites. Includes an extensive bibliography.

Natural Language Parsing and Linguistic Theories U. Reyle,C. Rohrer,2012-12-06 presupposition fails, we now give a short introduction into Unification Grammar. Since all implementations discussed in this volume use PROLOG (with the exception of BlockjHaugeneder), we felt that it would also be useful to explain the difference between unification in PROLOG and in UG. After the introduction to UG we briefly summarize the main arguments for using linguistic theories in natural language processing. We conclude with a short summary of the contributions to this volume.

UNIFICATION GRAMMAR 3 Feature Structures or Complex Categories. Unification Grammar was developed by Martin Kay (Kay 1979). Martin Kay wanted to give a precise definition (and implementation) of the notion of 'feature'. Linguists use features at nearly all levels of linguistic description. In phonetics, for instance, the phoneme b is usually described with the features 'bilabial', 'voiced' and 'nasal'. In the case of b the first two features get the value +, the third (nasal)

gets the value -. Feature value pairs in phonology are normally represented as a matrix. bilabial: + voiced: + I nasal: - [Feature matrix for b.] In syntax features are used, for example, to distinguish different noun classes. The Latin noun 'murus' would be characterized by the following feature-value pairs: gender: masculin, number: singular, case: nominative, pred: murus. Besides a matrix representation one frequently finds a graph representation for feature value pairs. The edges of the graph are labelled by features. The leaves denote the value of a feature.

Integer Programming and Combinatorial Optimization Robert E. Bixby, Andrew E. Boyd, Roger Z. Rios-Mercado, 2003-05-20 This book constitutes the refereed proceedings of the 6th International Conference on Integer Programming and Combinatorial Optimization, IPCO '98, held in Houston, Texas, USA, in June 1998. The 32 revised papers presented were carefully selected from a total of 77 submissions. The book is divided into sections on 0/1 matrices and matroids, edge connectivity, algorithms, integer Programming computation, network flows, scheduling, and quadratic assignment problems.

Applications of Gene-Based Technologies for Improving Animal Production and Health in Developing Countries Harinder P.S. Makkar, Gerrit J. Viljoen, 2005-12-27 Modern Biotechnology has potential for solving many problems associated with animal productivity and health and offers exciting opportunities for enhancing agricultural productivity. At present the focus is, however, on the issues and problems of significance for livestock producers in the developed world. In order to fully realize the benefits of this technology in developing countries, there is a need to identify, characterize and apply appropriate gene-based technologies for these regions. These proceedings present peer reviewed state-of-the-art papers describing the achievements in the areas of animal breeding and genetics, animal nutrition, animal health, and environment, ethics, safety, and

regulatory aspects of gene-based technologies; achievements which could be realized using these modern scientific tools to maximise the benefits from the 'livestock revolution' that is taking place; and the constraints in the use of gene-based technologies and their specific research needs. This book will help in bridging the wide gap between developed and developing countries, in the development and use of gene-based technologies, and to elucidate the current and future roles of such technologies in the developing world. It is a good reference source for researchers, students and policy-makers alike.

Southeast Asia and the Economics of Global Climate Stabilization David A. Raitzer, Francesco Bosello, Massimo Tavoni, Carlo Orecchia, Giacomo Marangoni, Jindra Nuella G. Samson, 2015-12-01 Climate change is a global concern of special relevance to Southeast Asia, a region that is both vulnerable to the effects of climate change and a rapidly increasing emitter of greenhouse gases (GHGs). This study focuses on five countries of Southeast Asia that collectively account for 90% of regional GHG emissions in recent years---Indonesia, Malaysia, the Philippines, Thailand, and Viet Nam. It applies two global dynamic economy-energy-environment models under an array of scenarios that reflect potential regimes for regulating global GHG emissions through 2050. The modeling identifies the potential economic costs of climate inaction for the region, how the countries can most efficiently achieve GHG emission mitigation, and the consequences of mitigation, both in terms of benefits and costs. Drawing on the modeling results, the study analyzes climate-related policies and identifies how further action can be taken to ensure low-carbon growth.

Researching Health Together Emily B. Zimmerman, 2020-03-02 The challenges of addressing health disparities, the ethical imperative to include stakeholders in research, and the slow translation of research evidence into practice are all driving a movement towards more community-based and participatory approaches to research. *Researching Health Together* brings together authors who have produced innovative methods or implemented projects focused on different stages of the research process, from question development to evaluation and translation. Editor Emily B. Zimmerman gathers exemplary new methods and projects into one place for the benefit of students designing research projects and proposals, those learning stakeholder-engaged methods, and those involved in implementing and funding stakeholder-engaged projects. Each chapter addresses: how engagement was conceptualized, organized, and implemented; how engagement was evaluated; impacts on processes and outcomes of the project; and facilitators, barriers, and lessons learned. The book serves as a core textbook for courses in community-based health research at the graduate level. [This book] focuses only on translational health research and expands beyond CBPR to include practice-based research networks (PBRN) and stakeholder-engaged research within health

systems.... The overall strengths of this book are its in-depth and almost inspirational focus on CBPR methodology, be those actual geographic or cultural communities or disease-based communities.... Researching Health Together, in its first edition, is a necessary bridge from the theory of participatory health research to its application across research environments. - Journal of Participatory Research Methods

Floods Freddy Vinet, 2017-11-22 The management of flood risk seems to be facing a daunting paradox. Despite increasingly effective risk knowledge tools and the efforts of international institutions to place risk reduction at the top of the agenda, the cost of disasters continues to increase. It is also increasingly difficult to avoid the urbanization or development of potential flood zones. The fundamental issue involves determining the conditions necessary for efficient prevention by focusing on adaptability to risk, which implies coping with the risk of flooding rather than directly fighting against it or simply ignoring it. This second volume of the *Floods* series of books explores existing policies and tools which mitigate the impact of flooding: the construction of protective structures, the reduction of vulnerability, land use planning, the improvement of crisis management, etc. The closing chapters focus on the question of adaptation through post-flood reconstruction, integrating disaster risk reduction measures, e.g. through resilient urbanism. Presents the state-of-the-art surrounding flood issues, from the description of the phenomena, to the management of risk (dikes, dams, reducing vulnerability and management of crisis) Written by specialists, but accessible to mainstream scientists Exposes knowledge, methodologies, scientific locks and the prospects of each discipline on the theme of floods

Fruit Flies (Tephritidae) Martin Aluja, Allen Norrbom, 1999-12-20 Fruit flies (Diptera: Tephritidae) are among the most destructive agricultural pests in the world, eating their way through acres and acres of citrus and other fruits at an alarming rate and forcing food and agriculture agencies to spend millions of dollars in control and management measures. But until now, the study of fruit flies has been traditionally biased towards applied aspects (e.g., management, monitoring, and mass rearing)-understandable, given the tremendous economic impact of this species. This work is the first that comprehensively addresses the study of the phylogeny and the evolution of fruit fly behavior. An international group of highly renowned scientists review the current state of knowledge and include considerable new findings on various aspects of fruit fly behavior, phylogeny and related subjects. In the past, the topics of phylogeny and evolution of behavior were barely addressed, and when so, often superficially. *Fruit Flies (Tephritidae)*:

Phylogeny and Evolution of Behavior is a definitive treatment, covering all behaviors in a broad range of tephritids. This volume is divided into eight sections:

Multiple Bonds between Metal Atoms F. Albert Cotton, Carlos A. Murillo, Richard A. Building and Using a Groundwater Database Garry Rowe, 2018-01-18 Building and Using a Groundwater Database is an introductory book that focuses on the fundamentals of groundwater database use. It is an excellent guide for people who collect and use groundwater quality data, hydrogeological data, and general geological data, as well as people who are required to prepare information about groundwater resources for others to use. The book also serves as a textbook for computer-based hydrogeology courses. Many university courses now make use of computerized groundwater data, yet no textbook exists to guide students in database use. Building and Using a Groundwater Database provides detailed information regarding the steps and perspectives required to create a database and use it for groundwater management, land use practices, planning, cleanups, site investigations, and general hydrogeologic reporting. The book is structured to take

the reader from the foundations of database development through maintenance and everyday use of the database. Actual examples from selected case studies are used to illustrate database principles. This book is unique in that it deals with the management and structuring of groundwater data, as opposed to the collection and interpretation of data. It illustrates how database software managers can be integrated with groundwater software tools. Building and Using a Groundwater Database provides consultants, engineers, public officials, university instructors, local and municipal water utilities, and banking and loan institutions with a clear, concise guide to using groundwater databases.
