Real Numbers, Generalizations of the Reals, and Theories of Continua P.

Ehrlich, 2013-06-29 Since their appearance in the late 19th century, the Cantor--Dedekind theory of real numbers and philosophy of the continuum have emerged as pillars of standard mathematical philosophy. On the other hand, this period also witnessed the emergence of a variety of alternative theories of real numbers and corresponding theories of continua, as well as non-Archimedean geometry, non-standard analysis, and a number of important generalizations of the system of real numbers, some of which have been described as arithmetic continua of one type or another. With the

exception of E.W. Hobson's essay, which is concerned with the ideas of Cantor and Dedekind and their reception at the turn of the century, the papers in the present collection are either concerned with or are contributions to, the latter groups of studies. All the contributors are outstanding authorities in their respective fields, and the essays, which are directed to historians and philosophers of mathematics as well as to mathematicians who are concerned with the foundations of their subject, are preceded by a lengthy historical introduction.

Enterprise-wide Data Modelling August-Wilhelm Scheer, 1989 This book describes modern methods for developing enterprise-wide information systems. The proven Architecture of Integrated Informations Systems (ARIS) is used as framework for the development of business process models for industrial companies. For the processes of logistics, product development, information and coordination the ARIS-architecture serves as basis for a description from the functional, organizational, data and process viewpoint. The developed reference models can be used right away to support the introduction of new organizational concepts through the employment of new information processing techniques. A wealth of graphical illustrations enhance the reader's understanding of the material. Examples from standard software systems (SAP/R3) demonstrate the book's down-to-earth practicality.

Database and Expert Systems Applications A Min Tjoa, Roland Wagner, 2012-12-06 Use and development of database and expert systems can be found in all fields of computer science. The aim of this book is to present a large spectrum of already implemented or just being developed database and expert systems. Contributions cover new requirements, concepts for implementations (e.g. languages, models, storage structures), management of meta data, system architectures, and experiences gained by using traditional databases in as many areas of applications as possible (at least in the fields listed). The aim of the book is to inspire a fruitful dialogue between development in practice, users of database and expert systems, and scientists working in the field.

Engaging With Stakeholders Adam Lindgreen, Francois Maon, Joelle Vanhamme, Beatriz Palacios Florencio, Christine Vallaster, Carolyn Strong, 2018-08-15 Engaging with Stakeholders: A Relational Perspective on Responsible Business contends that meaningful and constructive stakeholder engagement efforts should be rooted in a deep relational process of shared understanding, expectations, and viewpoints, through honest, continued dialogue between stakeholders and company management. This anthology follows and reaffirms this view, which also establishes the increasing need to explore the subtleties of how companies can respectfully engage their stakeholders in ways that reflect the corporate strategy and contribute to the ongoing development of business activities and creation of value, for themselves and stakeholders, from social, environmental, and economic perspectives. Stakeholder engagement practices, however, remain highly complex and difficult to manage; their ability to generate value in an inclusive way requires critical consideration. Sound stakeholder engagement efforts also constitute a keystone for responsible business activities. Drawing on a wide range of literature and studies, this book addresses key dimensions of stakeholder engagement, through a responsible business lens, and thereby contributes to identifying the opportunities, challenges, and key organizational implications associated with their unfolding. The four main topics covered are: • Delineating the nature and multiple *raison d'être* of stakeholder engagement • Dialogical and communicational foundations of stakeholder engagement • Engaging with diverse stakeholders throughout the value chain • Reaping organizational returns and relational rewards of stakeholder engagement efforts

Forest and land-use governance in a decentralized Indonesia: A legal and policy review Fitriani Ardiansyah, Andri Akbar Marthen, Nur Amalia, 2015-10-02 Which levels of government hold powers over forests and land use in Indonesia? Which powers and responsibilities are centralized, and which

are decentralized? What role can citizens play? This report reviews the statutory distribution of powers and responsibilities across levels and sectors. It outlines the legal mandates held by national, regional and local governments with regard to land and forests, including titling, forest concessions, oil and minerals investments, oil palm plantations, conservation, land use planning, and more. The review considers national legislation as of 2014 and incorporates important reforms in early 2015. After a short introduction, the second section describes the decentralization process, including mechanisms for public participation. The third section outlines sources of revenue available to different government levels from forest fees and payments for environmental services. The fourth section details the specific distribution of powers and arenas of responsibility related to multiple land use sectors across levels and among offices within levels, and the fifth and final section refers specifically to adat law. Summary tables are included for each different policy arena to facilitate analysis across government levels and functions: policy making, administration, control and monitoring, auditing and sanction.

Magnifying Data Structures Gopal, Gopal Arpita,

Probability and Random Processes Scott Miller, Donald Childers, 2012-01-25 *Probability and Random Processes*, Second Edition presents pertinent applications to signal processing and communications, two areas of key interest to students and professionals in today's booming communications industry. The new edition contains more real world signal processing and communications applications. It introduces the reader to the basics of probability theory and explores topics ranging from random variables, distributions and density functions to operations on a single random variable. There are also discussions on pairs of random variables; multiple random variables; random sequences and series; random processes in linear systems; Markov processes; and power spectral density. This book is intended for practicing engineers and students in graduate-level courses in the topic. Exceptional exposition and numerous worked out problems make the book extremely readable and accessible. The authors connect the applications discussed in class to the textbook. The new edition contains more real world signal processing and communications applications. Includes an entire chapter devoted to simulation techniques.

Progress in Reaction Kinetics G. Porter, 2013-09-03 *Progress in Reaction Kinetics*, Volume 4 is a 10-chapter text that focuses on the reactions of nitrogen atoms in the gas phase and some chemical factors in the kinetics of processes at electrodes. This volume describes first the free radical reactions dealing with halogenomethyl and alkoxyl radicals. The next chapters deal with electronically excited states, proton transfer, and kinetics of electrode processes. These topics are followed by discussions on the primary processes in the gas phase photochemistry of carbonyl compounds, as well as the mechanisms and rates of radiationless energy transfer. This book also looks into the methods used for the measurement of fluorescence lifetimes of aromatic compounds. A chapter examines the chemiluminescence in the oxidation of organic compounds and for other liquid-phase reactions. The last chapters discuss the role of the solvent in proton transfer reactions and some aspects of developments in the field of electrode processes. This book is of great value to reaction kinetics scientists and researchers.

Conceptual Modeling of Information Systems Antoni Olivé, 2007-08-15 This brilliant textbook explains in detail the principles of conceptual modeling independently from particular methods and languages and shows how to apply them in real-world projects. The author covers all aspects of the engineering process from structural modeling over behavioral modeling to meta-modeling, and completes the presentation with an extensive case study based on the osCommerce system. Written for computer science students in classes on information systems modeling as well as for professionals feeling the need to formalize their experiences or to update their knowledge, Olivé

delivers here a comprehensive treatment of all aspects of the modeling process. His book is complemented by lots of exercises and additional online teaching material.

Mining in the Asia-Pacific Terry O'Callaghan,Geordan Graetz,2017-09-06 This book provides the most comprehensive survey of mining activity and the principal challenges confronting the resources industry in the Asia-Pacific region today, and presents new theoretical and practical insights into the political and business risks faced by mining companies operating in the region from both academic and corporate perspectives. It focuses on the exploration, production and trade of the principal commodities coal, iron ore, uranium, oil and gas, and gold, as well as the emerging commodities unconventional gas and rare earth minerals, provides the reader with a valuable understanding of resource activity in the region. In addition, it also integrates and draws attention to eight key issue areas which have the potential to pose significant risks, challenges and opportunities for the industry going forward, which include sustainable development, resource governance and economic contributions, declining ore grades and territorial expansion, community aspects of mining, mining and indigenous peoples, climate change, and impact assessment. The contributors to this volume are experts in their respective fields, and the diversity of voices makes this book a must read for scholars, industry participants, investors and policy-makers with an interest in mining in the Asia-Pacific.
