**Mesopotamian Eye Disease Texts** Markham J. Geller, Strahil V. Panayotov, 2020-10-26 There is to date no comprehensive treatment of eye disease texts from ancient Mesopotamia, and no English translation of this material is available. This volume is the first complete edition and commentary on Mesopotamian medicine from Nineveh dealing with diseases of the eye. This ancient work, languishing in British Museum archives since the 19th century, is preserved on several large cuneiform manuscripts from the royal library of Ashurbanipal, from the 7th century BC. The longest surviving ancient work on diseased eyes, the text predates by several centuries corresponding Hippocratic treatises. The Nineveh series represents a systematic array of eye symptoms and therapies, also showing commonalities with Egyptian and Greco-Roman medicine. Since scholars of Near Eastern civilizations and ancient and general historians of medicine will need to be familiar with this material, the volume makes this aspect of Babylonian medicine fully accessible to both specialists and non-specialists, with all texts being fully translated into English.

*The Mathematics of Egypt, Mesopotamia, China, India, and Islam* Victor J. Katz, 2021-08-10 In recent decades it has become obvious that mathematics has always been a worldwide activity. But this is the first book to provide a substantial collection of English translations of key mathematical texts from the five most important ancient and medieval non-Western mathematical cultures, and to put them into full historical and mathematical context. The Mathematics of Egypt, Mesopotamia, China, India, and Islam gives English readers a firsthand understanding and appreciation of these cultures' important contributions to world mathematics. The five section authors—Annette Imhausen (Egypt), Eleanor Robson (Mesopotamia), Joseph Dauben (China), Kim Plofker (India), and J. Lennart Berggren (Islam)—are experts in their fields. Each author has selected key texts and in many cases provided new translations. The authors have also written substantial section introductions that give an overview of each mathematical culture and explanatory notes that put each selection into context. This authoritative commentary allows readers to understand the sometimes unfamiliar mathematics of these civilizations and the purpose and significance of each text. Addressing a critical gap in the mathematics literature in English, this book is an essential resource for anyone with at least an undergraduate degree in mathematics who wants to learn about non-Western mathematical developments and how they helped shape and enrich world mathematics. The book is also an indispensable guide for mathematics teachers who want to use non-Western mathematical ideas in the classroom.

**New Mathematical Cuneiform Texts** Jöran Friberg, Farouk N.H. Al-Rawi, 2017-02-13 This monograph presents in great detail a large number of both unpublished and previously published Babylonian mathematical texts in the cuneiform script. It is a continuation of the work *A Remarkable Collection of Babylonian Mathematical Texts* (Springer 2007) written by Jöran Friberg, the leading expert on Babylonian mathematics. Focussing on the big picture, Friberg explores in this book several Late Babylonian arithmetical and metro-mathematical table texts from the sites of Babylon, Uruk and Sippar, collections of mathematical exercises from four Old Babylonian sites, as well as a new text from Early Dynastic/Early Sargonic Umma, which is the oldest known collection of mathematical exercises. A

table of reciprocals from the end of the third millennium BC, differing radically from well-documented but younger tables of reciprocals from the Neo-Sumerian and Old-Babylonian periods, as well as a fragment of a Neo-Sumerian clay tablet showing a new type of a labyrinth are also discussed. The material is presented in the form of photos, hand copies, transliterations and translations, accompanied by exhaustive explanations. The previously unpublished mathematical cuneiform texts presented in this book were discovered by Farouk Al-Rawi, who also made numerous beautiful hand copies of most of the clay tablets. Historians of mathematics and the Mesopotamian civilization, linguists and those interested in ancient labyrinths will find New Mathematical Cuneiform Texts particularly valuable. The book contains many texts of previously unknown types and material that is not available elsewhere.

*Mathematics in Ancient Iraq* Eleanor Robson, 2020-06-30 This monumental book traces the origins and development of mathematics in the ancient Middle East, from its earliest beginnings in the fourth millennium BCE to the end of indigenous intellectual culture in the second century BCE when cuneiform writing was gradually abandoned. Eleanor Robson offers a history like no other, examining ancient mathematics within its broader social, political, economic, and religious contexts, and showing that mathematics was not just an abstract discipline for elites but a key component in ordering society and understanding the world. The region of modern-day Iraq is uniquely rich in evidence for ancient mathematics because its prehistoric inhabitants wrote on clay tablets, many hundreds of thousands of which have been archaeologically excavated, deciphered, and translated. Drawing from these and a wealth of other textual and archaeological evidence, Robson gives an extraordinarily detailed picture of how mathematical ideas and practices were conceived, used, and taught during this period. She challenges the prevailing view that they were merely the simplistic precursors of classical Greek mathematics, and explains how the prevailing view came to be. Robson reveals the true sophistication and beauty of ancient Middle Eastern

mathematics as it evolved over three thousand years, from the earliest beginnings of recorded accounting to complex mathematical astronomy. Every chapter provides detailed information on sources, and the book includes an appendix on all mathematical cuneiform tablets published before 2007.

**Babylonian Liver Omens** Ulla Susanne Koch, 2000 The Babylonians were famous even in their own time for their expertise in divination, and Koch-Westenholz suggests the lack of modern scholarship from the extensive written record is because the texts are dry, monotonous, and difficult to access and because divination is thought to be simple superstition not worth serious study. She makes a beginning on the accessibility problem by presenting three texts on interpreting sheep livers as the first of a projected complete series on the divinatory texts from the world's oldest extant general library. The edition is based on a catalogue, compiled by Ulla Jeyes as part of what was to be a collaboration on the project before Jeyes' untimely death, of the collections in the British Museum. The original inscriptions are followed by transcription and English translation. Tablets are illustrated in 48 photographic plates. Livers not included. Distributed in the US by ISBS. c. Computations and Computing Devices in Mathematics Education Before the Advent of Electronic Calculators Alexei Volkov,Viktor Freiman,2019-01-11 This volume traces back the history of interaction between the “computational” or “algorithmic” aspects of elementary mathematics and mathematics education throughout ages. More specifically, the examples of mathematical practices analyzed by the historians of mathematics and mathematics education who authored the chapters in the present collection show that the development (and, in some cases, decline) of counting devices and related computational practices needs to be considered within a particular context to which they arguably belonged, namely, the context of mathematics instruction; in their contributions the authors also explore the role that the instruments played in formation of didactical approaches in various mathematical traditions, stretching from Ancient Mesopotamia to the 20th century Europe and North America.

**Abstraction and Representation** Peter Damerow,1995-12-31 This book deals with the development of thinking under different cultural conditions, focusing on the evolution of mathematical thinking in the history of science and education. Starting from Piaget's genetic epistemology, it provides a conceptual framework for describing and explaining the development of cognition by reflective abstractions from systems of actions.

Hellenistic Philosophy John Sellars, 2018-07-04 The Hellenistic period was a rich and exciting time for philosophy. It saw the birth of two new schools of thought, Epicureanism and Stoicism, and important developments in Plato's Academy. Aristotelians and Cynics were also active during the period, all of which created a vibrant philosophical landscape. Many of the ideas now associated with early modern and enlightenment philosophy - such as empiricism, materialism, and religious scepticism - were widely discussed by Hellenistic philosophers. In Hellenistic Philosophy, Sellars offers a thematic introduction to the philosophy of this era. The author highlights the very practical outlook common of the time, in which philosophy was seen as a guide for life, and summarizes the key debates on a series of topics, ranging from epistemology to political philosophy. The works of Hellenistic philosophers had a vital influence on later thought, and especially on the development of early modern philosophy. In providing an accessible outline of this important era, the book is of particular use to students and general readers interested in the period. It is also an invaluable resource for teaching with its guide to Hellenistic philosophers, chronology, and extensive cross-references to standard collections of ancient texts.
