**The Online Safety Playbook** Arun Soni,2022-03-01 Children must learn several fundamental skills early in life to protect their safety. Before crossing the street, look both ways. Seatbelts must be worn at all times. Do not talk to strangers. Another item to add to the list is to be wary of hackers and cyber predators. Teachers and parents may teach students of all ages fundamental cybersecurity skills and encourage them to use digital hygiene daily. They can achieve it by including more online educational resources into their curricula and at the same time educating and updating themselves with cybersecurity skills. Children can be taught to automatically protect themselves against cyber threats, just as they do while crossing the street. Just ask yourself- Are we preparing our children for life in the digital age? Are we providing them with the required training and resources to deal with never-before-seen cyber threats? Is our educational system able to keep up with the rapid changes in our society, including technological advancements? The only problem with teaching Cybersecurity in schools and homes is that educators/parents may not be entirely updated on the subject. Or may not feel confident enough to teach it due to a lack of knowledge. That is why there is assistance for students of all age groups, educators and parents.

E-Mail Virus Protection Handbook Syngress,2000-11-06 The E-mail Virus Protection Handbook is organised around specific e-mail clients, server environments, and anti-virus software. The first eight chapters are useful to both users and network professionals; later chapters deal with topics relevant mostly to professionals with an emphasis on how to use e-mail filtering software to monitor all incoming documents for malicious behaviour. In addition, the handbook shows how to scan content and counter email address forgery attacks. A chapter on mobile code applications, which use Java applets and Active X controls to infect email and, ultimately, other applications and whole systems is presented. The book covers spamming and spoofing: Spam is the practice of sending unsolicited email to users. One spam attack can bring down an entire enterprise email system by sending thousands of bogus messages or mailbombing, which can overload servers. Email spoofing means that users receive messages that appear to have originated from one user, but in actuality were sent from another user. Email spoofing can be used to trick users into sending sensitive information, such as passwords or account numbers, back to the spoofer. Highly topical! Recent events such as the LoveBug virus means the demand for security solutions has never been higher Focuses on specific safeguards and solutions that are readily available to users
