Ruling Nature, Controlling People Luregn Lenggenhager, 2018 Recent nature conservation initiatives in Southern Africa such as communal conservancies and peace parks are often embedded in narratives of economic development and ecological research. They are also increasingly marked by militarisation and violence. In *Ruling Nature, Controlling People*, Luregn Lenggenhager shows that these features were also characteristic of South African rule over the Caprivi Strip region in North-Eastern Namibia, especially in the fields of forestry, fisheries and, ultimately, wildlife conservation. In the process, the increasingly internationalised war in the region from the late 1960s until Namibia's independence in 1990 became intricately interlinked with contemporary nature conservation, ecology and economic development projects. By retracing such interdependencies, Lenggenhager provides a novel perspective from which to examine the history of a region which has until now barely entered the focus of historical research. He thereby highlights the enduring relevance of the supposedly peripheral Caprivi and its military, scientific and environmental histories for efforts to develop a deeper understanding of the ways in which apartheid South Africa exerted state power.

Recreational Hunting, Conservation and Rural Livelihoods Barney Dickson, Jonathan Hutton, William A. Adams, 2009-01-22 Recreational hunting has long been a controversial issue. Is it a threat to biodiversity or can it be a tool for conservation, giving value to species and habitats that might otherwise be lost? Are the moral objections to hunting for pleasure well founded? Does recreational hunting support rural livelihoods in developing countries, or are these benefits exaggerated by proponents? For the first time, this book addresses many of the issues that are fundamental to an understanding of the real role of recreational hunting in conservation and rural development. It examines the key issues, asks the difficult questions, and seeks to present the answers to guide policy. Where the answers are not available, it highlights gaps in our knowledge and lays out the research agenda for the next decade.

*Recent Advances in Technologies for Inclusive Well-Being* Anthony Lewis Brooks, Sheryl Brahn, Bill Kapralos, Lakhmi C. Jain, 2017-02-18 This book presents current innovative, alternative and creative approaches that challenge traditional mechanisms in and across disciplines and industries targeting societal impact. A common thread throughout the book is human-centered, uni and multi-modal strategies across the range of human technologies, including sensing and stimuli; virtual and augmented worlds; games for serious applications; accessibility; digital-ethics and more. Focusing on engaging, meaningful, and motivating activities that at the same time offer systemic information on human condition, performance and progress, the book is of interest to anyone seeking to gain insights into the field, be they students, teachers, practicing professionals, consultants, or family representatives. By offering a wider perspective, it addresses the need for a core text that evokes and provokes, engages and demands and stimulates and satisfies.

*Game Guard Management* Ken Coetzee, 2013 The book is about the appointment, training, motivating, deployment, uplifting and appreciating the game guard wherever he may be employed and whatever the focus of his duties may be. It aims to provide inspiration for the establishment of effective game guard units and operations, whatever style of game ranch management is employed in any part of Africa.

*The Eye of the Elephant* Delia Owens, Mark Owens, 1993-10-29 An "exciting" true account of battling the elephant poachers of Zambia by the author of *Where the Crawdads Sing* and her fellow biologist (The Boston Globe). Intelligent, majestic, and loyal, with lifespans matching our own, elephants are among the greatest of the wonders gracing the African wilds. Yet, in the 1970s and 1980s, about a thousand of these captivating creatures were slaughtered in Zambia each year, killed for their valuable ivory tusks. When biologists Mark and Delia Owens, residing in Africa to study lions, found themselves in the middle of a poaching fray, they took the only side they morally could: that of the elephants. From the authors of *Secrets of the Savanna*, *The Eye of the Elephant* is "part adventure story, part wildlife tale," recounting the Owens's struggle to save these innocent animals from decimation, a journey not only to supply the natives with ways of supporting their villages, but also to cultivate support around the globe for the protection of elephants (The Boston Globe). Filled with

daring exploits among disgruntled hunters, arduous labor on the African plains, and vivid depictions of various wildlife, this remarkable tale is at once an adventure story, a travelogue, a preservationist call to action, and a fascinating examination of both human and animal nature.

Algorithms and Computation Seok-Hee Hong, Hiroshi Nagamochi, Takuro Fukunaga, 2008-12-11

This volume contains the proceedings of the 19th International Symposium on Algorithms and Computation (ISAAC 2008), held on the Gold Coast, Australia, December 15–17, 2008. In the past, it was held in Tokyo (1990), Taipei (1991), Nagoya (1992), Hong Kong (1993), Beijing (1994), Cairns (1995), Osaka (1996), Singapore (1997), Daejeon (1998), Chennai (1999), Taipei (2000), Christchurch (2001), Vancouver (2002), Kyoto (2003), Hong Kong (2004), Hainan (2005), Kolkata (2006), and Sendai (2007). ISAAC is an annual international symposium that covers the very wide range of topics in the field of algorithms and computation. The main purpose of the symposium is to provide a forum for researchers working in algorithms and theory of computation from all over the world. In response to our call for papers, we received 229 submissions from 40 countries. The task of selecting the papers in this volume was done by our Program Committee and many other external reviewers. After an extremely rigorous review process and extensive discussion, the Committee selected 78 papers. We hope all accepted papers will eventually appear in scientific journals in a more polished form. Two special issues, one of *Algorithmica* and one of the *International Journal on Computational Geometry and Applications*, with selected papers from ISAAC 2008 are in preparation.

**Grand Canyon's Uncle Jimmy Owens, The** Albert L. LeCount, 2021 In 1906, James Uncle Jimmy Owens, at the request of Teddy Roosevelt, moved to the remote North Rim of the Grand Canyon to help control the mountain lion population. He earned a reputation as a legendary hunter and guided hunts and tours for the rich and famous. Passionate about wildlife, Uncle Jimmy started out as a quiet, unassuming cowboy on a cattle ranch in Texas before taking a job as a buffalo warden in Yellowstone and meeting the future president, who would change the course of his life. He spent twenty-three years acquainting himself with the cliffs of the Grand Canyon, where one slip could mean instant death, before fading into obscurity. Join author Albert L. LeCount as he delves into the fascinating life of a forgotten man.

**Wildlife between Empire and Nation in Twentieth-Century Africa** Jeff Schauer, 2018-12-04

This book traces the emergence of wildlife policy in colonial eastern and central Africa over the course of a century. Spanning from imperial conquest through the consolidation of colonial rule, the rise of nationalism, and the emergence of neocolonial and neoliberal institutions, this book shows how these fundamental themes of the twentieth century shaped the relationships between humans and animals in what are today Kenya, Tanzania, Uganda, Zambia, and Malawi. A set of key themes emerges—changing administrative forms, militarization, nationalism, science, and a relentlessly broadening constituency for wildlife. Jeff Schauer illuminates how each of these developments were contingent upon the colonial experience, and how they fashioned a web of structures for understanding and governing wildlife in Africa—one which has lasted into the twenty-first century.

*Critical Infrastructure Protection in Homeland Security* Ted G. Lewis, 2019-11-25 Covers critical infrastructure protection, providing a rigorous treatment of risk, resilience, complex adaptive systems, and sector dependence. Wide in scope, this classroom-tested book is the only one to emphasize a scientific approach to protecting the key infrastructure components of a nation. It analyzes the complex network of entities that make up a nation's infrastructure, and identifies vulnerabilities and risks in various sectors by combining network science, complexity theory, risk analysis, and modeling and simulation. This approach reduces the complex problem of protecting water supplies, energy

pipelines, telecommunication stations, power grid, and Internet and Web networks to a much simpler problem of protecting a few critical nodes. The new third edition of *Critical Infrastructure Protection in Homeland Security: Defending a Networked Nation* incorporates a broader selection of ideas and sectors than the previous book. Divided into three sections, the first part looks at the historical origins of homeland security and critical infrastructure, and emphasizes current policy. The second examines theory and foundations, highlighting risk and resilience in the context of complexity theory, network science, and the prevailing theories of catastrophe. The last part covers the individual sectors, including communications, internet, cyber threats, information technology, social networks, SCADA, water and water treatment, energy, and more. Covers theories of catastrophes, details of how sectors work, and how to deal with the problem of critical infrastructure protection's enormity and complexity. Places great emphasis on computer security and whole-community response. Includes PowerPoint slides for use by lecturers, as well as an instructor's guide with answers to exercises. Offers five robust appendices that augment the non-mathematical chapters with more rigorous explanations and mathematics. *Critical Infrastructure Protection in Homeland Security, Third Edition* is an important book for upper-division undergraduates and first-year graduate students in political science, history, public administration, and computer technology. It will also be of great interest to professional security experts and policymakers.

**Game Hacking** Nick Cano, 2016-07-01 You don't need to be a wizard to transform a game you like into a game you love. Imagine if you could give your favorite PC game a more informative heads-up display or instantly collect all that loot from your latest epic battle. Bring your knowledge of Windows-based development and memory management, and *Game Hacking* will teach you what you need to become a true game hacker. Learn the basics, like reverse engineering, assembly code analysis, programmatic memory manipulation, and code injection, and hone your new skills with hands-on example code and practice binaries. Level up as you learn how to: -Scan and modify memory with Cheat Engine -Explore program structure and execution flow with OllyDbg -Log processes and pinpoint useful data files with Process Monitor -Manipulate control flow through NOPing, hooking, and more -Locate and dissect common game memory structures You'll even discover the secrets behind common game bots, including: -Extrasensory perception hacks, such as wallhacks and heads-up displays -Responsive hacks, such as autohealers and combo bots -Bots with artificial intelligence, such as cave walkers and automatic looters *Game hacking* might seem like black magic, but it doesn't have to be. Once you understand how bots are made, you'll be better positioned to defend against them in your own games. Journey through the inner workings of PC games with *Game Hacking*, and leave with a deeper understanding of both game design and computer security.
