Fifteenth Century Carthusian Reform Dennis D. Martin, 1992 Fifteenth-Century Carthusian Reform argues that monastic theology offers a medieval Catholic paradigm distinct from the scholastic theology that has been the conventional source for medieval-oriented interpretations of Renaissance and Reformation. It is based on thorough study of the manuscript record. Nicholas Kempf (ca. 1415-1497) taught at the University of Vienna before becoming the head of Carthusian monasteries in rural Austria and Slovenia. Faced with calls for reform in church and society, he placed his confidence in the patristic Christian idea of reform: the reform of the image of God in the human person. This contemplative monastic idea of reform depended on authoritative structures, especially the monastic rule and rational - yet divinely inspired - discernment by a spiritual director. What seemed like simpleminded submission to monastic structures was actually a way to avoid relying on human effort for salvation. By returning to one's true self (the image of God), one opened oneself up for genuine social relationships. To activist reformers, whether adherents of medieval scholasticism, Renaissance humanism, or modern Enlightenment, this monastic idea of reform has seemed escapist, backward-looking, and womanish. Monks accepted these labels but read them as signs of hidden strength. This book attempts to read through monastic lenses.

The Professor Is In Karen Kelsky, 2015-08-04 The definitive career guide for grad students, adjuncts, post-docs and anyone else eager to get tenure or turn their Ph.D. into their ideal job Each year tens of thousands of students will, after years of hard work and enormous amounts of money, earn their Ph.D. And each year only a small percentage of them will land a job that justifies and rewards their investment. For every comfortably tenured professor or well-paid former academic, there are countless underpaid and overworked adjuncts, and many more who simply give up in frustration. Those who do make it share an important asset that separates them from the pack: they have a plan. They understand exactly what they need to do to set themselves up for success. They know what really moves the needle in academic job searches, how to avoid the all-too-common

mistakes that sink so many of their peers, and how to decide when to point their Ph.D. toward other, non-academic options. Karen Kelsky has made it her mission to help readers join the select few who get the most out of their Ph.D. As a former tenured professor and department head who oversaw numerous academic job searches, she knows from experience exactly what gets an academic applicant a job. And as the creator of the popular and widely respected advice site The Professor is In, she has helped countless Ph.D.'s turn themselves into stronger applicants and land their dream careers. Now, for the first time ever, Karen has poured all her best advice into a single handy guide that addresses the most important issues facing any Ph.D., including: -When, where, and what to publish -Writing a foolproof grant application -Cultivating references and crafting the perfect CV -Acing the job talk and campus interview -Avoiding the adjunct trap -Making the leap to nonacademic work, when the time is right The Professor Is In addresses all of these issues, and many more.

Hands-On IoT: Wi-Fi and Embedded Web Development Erwin Ouyang,2020-06-19 Rapid advances in IoT technology demand a lot of devices to be connected to the internet. To design such devices, we usually need knowledges about microcontrollers and computer network. As an example, we often found devices that can be connected to the network and can be configured via web interfaces. These devices implement embedded web server. For example, most of network devices usually use embedded web server as the interface for configuration. Although there are a lot of books that discuss about microcontrollers or web development, they usually discuss the topics in separate books. Rarely, there is a book that discusses both of the topics in one book, i.e. the book that discusses how to create a web interface for a microcontroller. Therefore, this book is written to fill that gap. The Arduino library is used to program the ESP32, while HTML, CSS, and JavaScript are used to build the web interface.
