Properties of Water in Foods D. Simatos,J.L. Multon,2012-12-06 Water is recognized as being an important factor in numerous phenomena connected with the quality of food. For instance, it plays a part in the textural properties of several commodities. Moreover, water is an essential parameter determining the behaviour of food products in the course of many processing operations : on water, will depend the amount of energy necessary for freezing or dehydrating the product; water will strongly influence the evolution of physical, chemical and biochemical phenomena taking place in the product during processing operations such as heating, drying, etc. Water will also influence the same reactions, as well as the activity of microorganisms, during the storage of food products under various conditions. As a result, all aspects of quality - sensory, nutritional and hygienic properties of the food - will be affected. In all these circumstances, the water content of a product is obviously an important factor, but equally important may be the physical properties of this water, such as its thermodynamic activity and its mobility. Actual ly, the concept of water activity (a) is now widely used by the food industry and in the legislation of sever')¥l countries. The idea of a small, international meeting devoted to a synthetic review and discussion of knowledge on these various matters, was first developed by Dr. R. B.

Offshore Structures Günther Clauss,Eike Lehmann,Carsten Østergaard,2014-09-25 This updated translation from the original German edition provides general background information on oceanology and ocean engineering is given, along with descriptions of drilling techniques, offshore structures and hydrocarbon production at sea. The main part of the book is concerned with the hydrostatic and hydrodynamic analysis of marine structures, followed by an evaluation of marine structure reliability. Environmental conditions affecting marine structures, wave statistics, and the application of reliability theory to code development are also discussed. Students and practising engineers who have an interest in the analysis of marine structures will find this book an invaluable reference.

Stock Guide ,1983-07 Monthly statistical summary of 5100 stocks.

Water Relations of Foods R Duckworth,2012-12-02 Water Relations of Foods consists of proceedings of an international symposium on "Water Relations of Foods held in Glasgow, in September 1974. Organized into seven sections, the book presents the various papers delivered in the symposium. It describes the physical chemistry of water in simple systems as well as in the more complex food component systems (carbohydrates, lipids, and proteins), with emphasis on the nature of the intermolecular forces involved. It also reports the various techniques used to measure the state of water in food and in model systems made up of food components. Furthermore, the book discusses water activity and the growth of food spoilage and pathogenic organism; water relations of enzymic and non-enzymic deteriorative reactions in food; effects of freezing and thawing of water in food systems; and the significant aspects of food quality as affected by water in the system. Lastly, the modification of the state of water in foods is addressed. This publication will indeed help advance the understanding on this field of interest.

Family Skills Training for Parents and Children Karol Linda Kumpfer,2000 Features the Strengthening Families Program - a family change programme that reflects research that indicates that the most effective interventions build parent, child and family skills.

no. 1-500 ,1922

Hoping for Continuity Katariina Mustakallio,2005 The present volume includes essays originally given as papers at two conferences. The first Passages from Antiquity to the Middle Ages was held in Tampere January 2003. The second conference, subtitled Aging, Old Age, and Death, was held in Tampere August 2005. This collection starts with the essays by Beryl Rawson and Didier Lett, which reflect the present state and the future challenges of the study of childhood. The latter part of this volume, starting from the Eva Cantarella's contribution on marriage, consists of thematic studies. They all show an interest in individuals and families in different stages of life seeking to secure continuity, that is, continuity of the family, its material fortune, name, memory, and the continuity of its individual members in the afterlife.

Handbook on Crime Fiona Brookman,Mike Maguire,Harriet Pierpoint,Trevor Bennett,2010-02-01 The Handbook on Crime is a comprehensive edited volume that contains analysis and explanation of the nature, extent, patterns and causes of over 40 different forms of crime, in each case drawing attention to key contemporary debates and social and criminal justice responses to them. It also challenges many popular and official conceptions of crime. This book is one of the few criminological texts that takes as its starting point a range of specific types of criminal activity. It addresses not only 'conventional' offences such as shoplifting, burglary, robbery, and vehicle crime, but many other forms of criminal behaviour - often an amalgamation of different legal offences - which attract contemporary media, public and policy concern. These include crimes committed not only by individuals, but by organised criminal groups, corporations and governments. There are chapters on, for example, gang violence, hate crime, elder abuse, animal abuse, cyber crime, identity theft, money-laundering, eco crimes, drug trafficking, human trafficking, genocide, and global terrorism. Many of these topics receive surprisingly little attention in the criminological literature. The Handbook on Crime will be a unique text of lasting value to students, researchers, academics, practitioners, policy makers, journalists and all others involved in understanding and preventing criminal behaviour.

Secularism & Secularity Barry Alexander Kosmin,Ariela Keysar,2007

Christianity and Russia ,1988

No Need for Geniuses Steve Jones,2017-05-04 Paris at the time of the French Revolution was the world capital of science. Its scholars laid the foundations of today's physics, chemistry and biology. They were true revolutionaries: agents of an upheaval both of understanding and of politics. Many had an astonishing breadth of talents. The Minister of Finance just before the upheaval did research on crystals and the spread of animal disease. After it, Paris's first mayor was an astronomer, the general who fought off invaders was a mathematician while Marat, a major figure in the Terror, saw himself as a leading physicist. Paris in the century around 1789 saw the first lightning conductor, the first flight, the first estimate of the speed of light and the invention of the tin can and the stethoscope. The metre replaced the yard and the theory of evolution came into being. The city was saturated in science and many of its monuments still are. The Eiffel Tower, built to celebrate the Revolution's centennial, saw the world's first wind-tunnel and first radio message, and first observation of cosmic rays. Perhaps the greatest Revolutionary scientist of all, Antoine Lavoisier, founded modern chemistry and physiology, transformed French farming, and much improved gunpowder manufacture. His political activities brought him a fortune, but in the end led to his execution. The judge who sentenced him - and many other researchers - claimed that 'the Revolution has no need for geniuses'. In this enthralling and timely book Steve Jones shows how wrong this was and takes a sideways look at Paris, its history, and its science, to give a dazzling new insight into the City of Light.

Preparation for Family Life Klaus Schleicher,1982

Readings in Human Development Theron M. Covin,1974

Water in Polymers Stanley Paul Rowland,1980

Water in Foods Fito,Mulet,McKenna,2013-10-22 Water in Foods: Fundamental Aspects and their Significance in Relation to Processing of Foods contains the proceedings of the Fifth International Symposium on the Properties of Water in Foods (ISOPOW-V), held in Peniscola, Valencia, Spain, on November 8-14,1992. Organized into 31 chapters, each chapter representing the papers presented in the meeting, this book begins with a review of the theoretical aspects of hydration. Some chapters follow discussing the basic physical chemistry and links between hydration and solute interactions; computer modeling studies of the interaction of water with carbohydrates; and theories of liquid-glass transition. This book also describes the NMR imaging in the study of diffusion of water in foods, mechanical properties of frozen model solutions, and the role of water in biomembrane structures. Other chapters relate water to the methods of food preservation.

The Catechism of Positive Religion Auguste Comte,2009-07-20 This English edition of The Catechism of Positive Religion was published in 1891, thirty-four years after the death of Comte, the French philosopher of science and politics and founder of positivism, whose work was widely read in the later nineteenth century. Comte's self-published French original of 1852, translated here, outlines his progressive ideal of 'sociocracy', which would provide a systematic basis, free of metaphysics, for intellectual and moral transactions among humans. Congreve's edition, in common with others, divides the book into five parts. The introduction contains two dialogues, entitled General Theory of Religion and Theory of Humanity. Parts 1-3 respectively consider the Positivist's private and public 'worship'; 'doctrine', including the external world and human society and ethics; and 'regime' or

way of life, private and public. The final two dialogues cover polytheism, monotheism and theocracy. This book remains of interest as an early precursor of secular humanist ethics.

Offshore Structures Günther Clauss,Eike Lehmann,Carsten Östergaard,2012-12-06 This is the second part of the translation of the original German text Meerestechnische Konstruktionen which was published by Springer-Verlag in 1988. The translated material is a reviewed and updated version of the German text. Whereas the first volume concentrates on general and external factors, this one focuses on factors affecting the design and analysis of offshore structures themselves. In an effort to address a wide audience the topic is presented in a general context. Therefore it introduces students and practising engineers to the field of marine technology and, at the same time, serves as a reference book for experts. Finally it gives specialists in related fields an idea of where their work on individual problems of offshore structures stands in relation to the field as a whole. Offshore Structures, Vol. 2 is based on the authors' lectures and design practice in offshore structures and their components. It assists the reader in developing practical solutions by introducing a large number of examples and reference is made to further specialised literature.
