*WAVE OPTICS* SURESH GARG, SANJAY GUPTA, C. K.

GHOSH, 2011-12-24 This textbook offers a complete and rigorous presentation of the fundamentals and applications of wave optics. The material of the book covers topics on wave nature of light—reflection, refraction, polarisation, diffraction, dispersion and scattering of electromagnetic waves. Interference phenomenon is discussed both by division of wavefront and by division of amplitude. Diffraction is classified as Fresnel diffraction and Fraunhofer diffraction. The discussion on Fraunhofer diffraction has been used to explain the theory and resolving power of optical instruments. The role of phenomena of dispersion and scattering of light has been lucidly explained in the field of communication of information, its quality and content. The last three chapters are devoted to the study of the recently developed modern topics—lasers, holography, and fibre optics—all of which have opened up immense opportunities for new applications in almost all branches of science and engineering. Though the book is intended for the undergraduate students of physics—both honours and general courses—it will also be useful to candidates aspiring to sit the competitive examinations. **KEY FEATURES :** Presents interactive text interspersed with in-text questions to enable students to shift focus on active learning. Uses access devices such as expected learning outcomes and practice exercises for directed teaching-learning. Includes numerous worked-out examples to illustrate the concepts and provides review questions to test the students' understanding of the subject. Gives chapter-end summary for quick revision of the important results.

**Revisiting the Past in Museums and at Historic Sites**

Anca I. Lasc, Andrew McClellan, Anne Söll, 2021-11-01 Revisiting the Past in Museums and at Historic Sites demonstrates that museums and historic spaces are increasingly becoming backdrops for all sorts of appropriations and interventions that

throw new light upon the objects they comprise and the pasts they reference. Rooted in new scholarship that expands established notions of art installations, museums, period rooms, and historic sites, the book brings together contributions from scholars from intersecting disciplines. Arguing that we are witnessing a paradigm shift concerning the place of historic spaces and museums in the contemporary imaginary, the volume shows that such institutions are merging traditional scholarly activities tied to historical representation and inquiry with novel modes of display and interpretation, drawing them closer to the world of entertainment and interactive consumption. Case studies analyze how a range of interventions impact historic spaces and conceptions of the past they generate. The book concludes that museums and historic sites are reinventing themselves in order to remain meaningful and to play a role in societies aspiring to be more inclusive and open to historical and cultural debate. Revisiting the Past in Museums and at Historic Sites will be of interest to students and faculty who are engaged in the study of museums, art history, architectural and design history, social and cultural history, interior design, visual culture, and material culture.

Acting Richard Boleslavsky,2019-02-11 The classic text on the craft of Method acting by the founder of The American Laboratory Theatre. After studying at the Moscow Art Theatre under Konstantin Stanislavski, Richard Boleslavsky became one of the most important acting teachers of his or any generation. Bringing Stanislavski's system to America in the 1920s and 30s, he influenced many of the titans of American drama, from his own students—including Lee Strasburg and Stella Adler—to Marlon Brando, Paul Newman, and many others. In *Acting: The First Six Lessons*, Boleslavsky presents his acting theory and technique in a series of accessible and engaging dialogues. Widely considered a must-have for any serious actor, Boleslavsky's work has long helped actors better understand their craft.
