Measuring the Information Society Report 2016 International Telecommunication Union, 2017-07-11 The Measuring the Information Society Report, which has been published annually since 2009, features key ICT data and benchmarking tools to measure the information society, including the ICT Development Index (IDI). The IDI 2016 captures the level of ICT developments in 175 economies worldwide and compares progress made since the year 2014. The MISR 2016 assesses IDI findings at the regional level and highlights countries that rank at the top of the IDI and those that have improved their position in the overall IDI rankings most dynamically since 2014. It will also use the findings of the IDI to analyze trends and developments in the digital divide. The report will present 2015 prices for about 160 countries and provide a detailed analysis of mobile-cellular, fixed-broadband and mobile-broadband prices over the period 2008-2015. It will highlight the role of ICTs in achieving the Sustainable Development Goals and present the newly agreed SDG indicator framework, including the

ICT indicators. The report will also include a chapter looking into new metrics to measure mobile uptake, and a chapter presenting data analyzing Internet use and uptake.

Telemedicine in Low-Resource Settings Richard

Wootton, 2015-04-24 Telemedicine networks to support healthcare workers in resource-limited settings (often for humanitarian purposes) have evolved over the last decade or so in a largely autonomous way. Communication between them has been informal and relatively limited in scope. This situation could be improved by developing a comprehensive approach to the collection and dissemination of information. A recent review identified seven telemedicine networks, each of which had been in operation for at least five years and which provided store-and-forward telemedicine services to doctors in low- and middle-income countries. These networks provide clinically useful services and improved healthcare access. However, like much of telemedicine, the formal evidence for their cost-effectiveness remains weak. Topics of current

research interest therefore include the cost-effectiveness of telemedicine in resource-limited settings. Outcomes data (and methods for gathering it) such as patient quality of life following a telemedicine episode, the knowledge-gain of healthcare staff involved in telemedicine, and staff recruitment and retention in rural areas are also of interest. Finally, there is little published information about the performance of these telemedicine networks (and methods for measuring it), about how best to manage them, and about how to share resources between them. A collection of articles reporting the current evidence supporting the use of telemedicine in resource-limited settings would build the evidence base and should provide a focus for future research. It would also serve to raise the profile of this potentially important research field.

performance; software engineering; information systems; and computational intelligence. They are organized in the following topical headings: communications; and computer and software engineering.

THIS IS THE PERFECT GUIDE FOR ANYONE GRAPPLING FOR THE FIRST TIME WITH FACETIME, GOOGLE HANGOUTS OR ANY OTHER ASPECT OF THE MODERN WORLD. A handy guide for anyone who says, 'The Facebook' or 'The Google' or who asks, 'Do they deliver emails on Sunday?' This is a book for the elderly and not-so-elderly who are bamboozled not just by the technology of the contemporary world, but also various modern concepts and conceits that the more youthful take for granted. It explains a host of modern concepts and technologies that have entered everyday use and parlance but which are alien (and possibly frightening) not just to the elderly - but probably also to anyone over 45. These concepts are universal and should therefore appeal to readers in the UK, Australia, US and Europe. The definitions are all real, but entertaining, making use of easy-to-understand 'real world' references or examples to explain them.
