Designed for use by pre- and in-service music teachers, it provides the essential understandings required to become an adaptive expert with music technology, creating and implementing lessons, units, and curriculum that take advantage of technological affordances to assist students in developing their musicianship. Author William I. Bauer makes connections among music knowledge and skill outcomes, the research on human cognition and music learning, best practices in music pedagogy, and technology. His essential premise is that music educators and students benefit through use of technology as a tool to support learning in the three musical processes - creating, performing, and responding to music. The philosophical and theoretical rationales, along with the practical information discussed in the

book, are applicable to all experience levels. However, the technological applications described are focused at a beginning to intermediate level, relevant to both pre-service and in-service music educators and their students. **DIY Media** Michele Knobel, Colin Lankshear, 2010 Schools remain notorious for co-opting digital technologies to «business as usual» approaches to teaching new literacies. DIY Media addresses this issue head-on, and describes expansive and creative practices of digital literacy that are increasingly influential and popular in contexts beyond the school, and whose educational potential is not yet being tapped to any significant degree in classrooms. This book is very much concerned with engaging students in do-it-yourself digitally mediated meaning-making practices. As such, it is organized around three broad areas of digital media: moving media, still media, and audio media. Specific DIY media practices addressed in the chapters include machinima, anime music videos, digital photography, podcasting, and music remixing. Each chapter opens with an overview of a specific DIY media practice, includes a practical how-to tutorial section, and closes with suggested applications for classroom settings. This collection will appeal not only to educators, but to anyone invested in better understanding - and perhaps participating in - the significant shift towards everyday people producing their own digital media.
