*Digital Video Surveillance and Security* Anthony C. Caputo,2014-03-18 The use of digital surveillance technology is rapidly growing as it becomes significantly cheaper for live and remote monitoring. The second edition of Digital Video Surveillance and Security provides the most current and complete reference for security professionals and consultants as they plan, design, and implement surveillance systems to secure their places of business. By providing the necessary explanations of terms, concepts, and technological capabilities, this revised edition addresses the newest technologies and solutions available on the market today. With clear descriptions and detailed illustrations, Digital Video Surveillance and Security is the only book that shows the need for an overall understanding of the digital video surveillance (DVS) ecosystem. Highly visual with easy-to-read diagrams, schematics, tables, troubleshooting charts, and graphs Includes design and implementation case studies and best practices Uses vendor-neutral comparisons of the latest camera equipment and recording options

Video Surveillance 101 Noah Daniels,2014-02-27 Today the use of video surveillance has increased to more and different areas of our world. Industrial companies are using closed circuit television systems to monitor processes which take place in dangerous conditions for humans. The use of the cameras in those areas allows a worker to monitor the processes without being subjected to uninhabitable conditions. At times the closed circuit television system monitoring the processes is required by law in order to maintain safety conditions.

**Moving Object Detection and Segmentation for Remote Aerial Video Surveillance** Michael Teutsch,2020-10-09 Unmanned Aerial Vehicles (UAVs) equipped with video cameras are a flexible support to ensure civil and military safety and security. In this thesis, a video processing chain is presented for moving object detection in aerial video surveillance. A Track-Before-Detect (TBD) algorithm is applied to detect motion that is independent of the camera motion. Novel robust and fast object detection and segmentation approaches improve the baseline TBD and outperform current state-of-the-art methods. **Remote Client of Home Video Surveillance System** Zichuan Zou,2016 DVR now is evolving to NVR, which allows people to build their video surveillance system more flexible. Through IP network, people can monitor information from NVR anywhere as long as there's Internet access. To achieve this goal, applications are needed. This paper focuses on developing an overall solution to realize this goal: one standalone software that utilize a 3rd party SDK to remotely perform operations to a series of NVR devices with a user friendly interface and one browser plugin to be invoked when the browser page access to a devices is available. The plugin will comply with NPAPI standard and existing both browser and server environments. The software explores the function of SDK and realizes real-time play, play back, configuration and device management modules; these modules can satisfy user's daily use. The architecture of the software follows the OOP concept and only very limited information flows between modules and functions. It works very well except the play part. Plugin finally developed to invoke the software when necessary due to lack of material about the existing environment.

**Video-Based Surveillance Systems** Graeme A. Jones,Nikos Paragios,Carlo S. Regazzoni,2012-12-06 Monitoring of public and private sites has increasingly become a very sensitive issue resulting in a patchwork of privacy laws varying from country to country -though all aimed at protecting the privacy of the citizen. It is important to remember, however, that monitoring and visual surveillance capabilities can also be employed to aid the citizen. The focus of current development is primarily aimed at public and corporate safety applications including the monitoring of railway stations, airports, and inaccessible or dangerous environments. Future research effort, however, has already targeted citizen-oriented applications such as monitoring assistants for the aged and infirm, route-planning and congestion-avoidance tools, and a range of environmental monitoring applications. The latest generation of surveillance systems has eagerly adopted recent technological developments to produce a fully digital pipeline of digital image acquisition, digital data transmission and digital recording. The resultant surveillance products are highly-flexible, capable of generating forensic-quality imagery, and able to exploit existing Internet and wide area network services to provide remote monitoring capability.

**Intelligent Network Video** ,2008-09-10 Offering ready access to the security industry's cutting-edge digital future, Intelligent Network Video provides the first complete reference for all those involved with developing, implementing, and maintaining the latest surveillance systems. Pioneering expert Fredrik Nilsson explains how IP-based video surveillance systems provide better image quality, and a more scalable and flexible system at lower cost. A complete and practical reference for all those in the field, this volume: Describes all components relevant to modern IP video surveillance systems Provides in-depth information about image, audio, networking, and compression technologies Discusses intelligent video architectures and applications Offers a comprehensive checklist for those designing a network video system, as well as a systems design tool on DVD Nilsson guides readers through a well-organized tour of the building blocks of modern video surveillance systems, including network cameras, video encoders, storage, servers, sensors, and video management. From there, he explains intelligent video, looking at the architectures and typical applications associated with this exciting technology. Taking a hands-on approach that meets the needs of those working in the industry, this timely volume, illustrated with more than 300 color photos, supplies readers with a deeper understanding of how surveillance technology has developed and, through application, demonstrates why its future is all about intelligent network video.

**Intelligent Video Surveillance** António J. R. Neves,2019-03-13 The goal of Intelligent video surveillance systems is to efficiently extract useful information from a considerable number of videos collected by surveillance cameras by automatically detecting, tracking and recognizing objects of interest, and understanding and analyzing their activities. Video surveillance has a huge amount of applications, from public to private places. These applications require monitoring indoor and outdoor scenes. Nowadays, there are a considerable number of digital surveillance cameras collecting a huge amount of data on a daily basis. Researchers are urged to develop intelligent systems to efficiently extract and visualize useful information from this big data source. The exponential effort on the development of new algorithms and systems for video surveillance is confirmed by the amount of effort invested in projects and companies, the creation on new startups worldwide and, not less important, in the quantity and quality of the manuscripts published in a considerable number of journals and conferences worldwide. This book is an outcome of research done by several researchers who have highly contributed to the field of Video Surveillance.
