How are visibility regimes created, organized and contested? Tackling both social theory and social research, the book is an exploration into how intervisibilities produce crucial sociotechnical and biopolitical effects.

Theory of Innovation Jati Sengupta,2013-10-04 The current economic theory of innovation mainly analyses the technology factor and its impact on economic growth. In today's world, growth in information technology and knowledge of new ideas has altered the business paradigm dramatically. Modern economies have undergone a dynamic shift from material manufacturing to a new information technology model with research and development (R&D) and human capital. Through information and communications technology efficient information usage has achieved substantial productivity gains through learning by doing and incremental innovations. The present volume discusses this new paradigm in terms of both theory and industry applications, including Schumpeter in his innovation model and the emphasis on new innovations replacing the old. Growth of business networking and R&D consortium have dramatically helped the modern business to reduce their unit costs and improve efficiency. This volume presents some new models emphasizing knowledge sharing and R&D cooperation. Rapid growth in recent times in some south Asian countries have been cited as growth miracles are largely caused by knowledge spillover and learning by doing, and this volume also investigates the role of incremental innovations. With a strong focus and extension of the current theory of innovation and industry growth experiences of both the US and Asian countries, this book will be of interest to MBA and graduate students in economics, innovation management, and applied industrial economics.

EMC '91: Non-Ferrous Metallurgy—Present and Future Jean Vereecken,2012-12-06 This volume contains the papers that will be presented at 'EMC '91 '-the European Metals Conference-to be held in Brussels, Belgium, from 15 to 20 September 1991, and organized by Benelux Metallurgie, GDMB (Gesellschaft Deutscher Metallhütten und Bergleute) and IMM (the Institution of Mining and Metallurgy). 'EMC '91' is the first of an intended major series organized at the European level with the aim of bringing together all those who are involved with the extraction and processing of non-ferrous metals-European metallurgists and their international colleagues-to provide them with the opportunity to exchange views on the state and evolution of their industry. The programme covers all the different aspects of the metallurgy of non-ferrous metals from mining to fabricated products. Particular attention is being paid to the European non -ferrous industry with respect to changes in demand, the technology used, pressures on the environment and the competitive position of manufacturers. The contributions of the plenary lecturers (copies of which will appear in the IMM journal Minerals Industry International in 1991-92) and the many authors are gratefully acknowledged. Thanks are also due to the referees of the papers, the sponsors, the companies that have allowed registrants to visit their operations, the chairmen of the technical sessions and the staffs of the organizing bodies for their efficient administrative work. Other Histories Kirsten Hastrup,1992 After a decade of historical anthropology, the discipline seems to be thoroughly historicized. This implies not only that the historical dimension of other cultures has become an integrated part of any anthropological inquiry, but also that the different ways of producing history have become important considerations. Using mainly European historical and ethnographic materials, *Other Histories* examines the nature of history and its importance to anthropological study. The apparently Eurocentric perspective of this volume actually serves the purpose of dismantling the unity and progress of European history. It demonstrates that history is not linear but highly complex, often containing several separate local histories.

Middle Classes Simon Gunn,Rachel Bell,2011-06-16 The first general history of the English middle classes, based on BBC TV programme of which Will Self said 'No simple overview can do justice to this programme - an exemplary series and mandatory viewing'. Afternoon tea, the Women's Institute, Mrs Beeton, department stores, suburbia, seaside holidays and cycling clubs - all preserves of the great middle class. But where did the middle classes come from? And what makes a person middle class today? Although the term 'middle class' is part of our everyday language, the middle class has not been a feature of the British social scene from time immemorial. Drawing on the memories and life stories of individuals and families, as well as the words of distinguished historians and social commentators, this fascinating portrait of a people traces the roots of middle-class values in Victorian England through to the great educational reforms of the twentieth century. Panoramic and personal, this book provides a compelling picture of this influential social group and looks at what their future might be.

Italians to America: March 1903-April 1903 Ira A. Glazier,Percy William Filby,1992 Italians to America is the first indexed reference work devoted to Italian immigrants to the United States. This series contains passenger list information in chronological order on the first major wave of Italian migration during the last two decades of the nineteenth century, as well as the beginning of the twentieth century. As with the highly regarded companion series on German immigrants, Italians to America presents the passenger lists in chronological order, including information on each person's age, sex, occupation, village of origin, and destination, plus the name of the ship, the port of embarkation, and the date of arrival. Each volume also contains an introduction on the history of Italian migration to the U.S. and a full name index, greatly simplifying the researcher's job.

Rate Processes of Extractive Metallurgy Hong Yong Sohn,Milton E. Wadsworth,2013-11-21 Computer technology in the past fifteen years has essentially revolutionized engineering education. Complex systems involving coupled mass transport and flow have yielded to numerical analysis even for relatively complex geometries. The application of such technology together with advances in applied physical chemistry have justified a general updating of the field of heterogeneous kinetics in extractive metallurgy. This book is an attempt to cover significant areas of extractive metallurgy from the viewpoint of heterogeneous kinetics. Kinetic studies

serve to elucidate fundamental mechanisms of reactions and to provide data for engineering applications, including improved ability to scale processes up from bench to pilot plant. The general theme of this book is the latter-the scale-up. The practicing engineer is faced with problems of changes of order of magnitude in reactor size. We hope that the fundamentals of heterogeneous kinetics will provide increasing ability for such scale-up efforts. Although thermodynamics is important in defining potential reaction paths and the end products, kinetic limitations involving molecular reactions, mass transport, or heat flow normally influence ultimate rates of production. For this reason, rate processes in the general field of extractive metallurgy have been emphasized in this book.
