Hot Embossing Matthias Worgull,2009-09-28 This book is an overview of replication technology for micro- and nanostructures, focusing on the techniques and technology of hot embossing, a scaleable and multi-purpose technology for the manufacture of devices such as BioMEMS and microfluidic devices which are expected to revolutionize a wide range of medical and industrial processes over the coming decade. The hot embossing process for replicating microstructures was developed by the Forschungszentrum Karlsruhe (Karlsruhe Institute of Technology) where the author is head of the Nanoreplication Group. Worgull fills a gap in existing information by fully detailing the technology and techniques of hot embossing. He also covers nanoimprinting, a process related to hot embossing, with examples of actual research topics and new applications in nanoreplication. *A practical and theoretical guide to selecting the materials, machinery and processes involved in microreplication using hot embossing techniques. *Compares different replication processes such as: micro injection molding, micro thermoforming, micro hot embossing, and nanoimprinting *Details commercially available hot embossing machinery and components like tools and mold inserts

The House of Wisdom Jim Al-Khalili,2011-03-31 A myth-shattering view of the Islamic world's myriad scientific innovations and the role they played in sparking the European Renaissance. Many of the innovations that we think of as hallmarks of Western science had their roots in the Arab world of the middle ages, a period when much of Western Christendom lay in intellectual darkness. Jim al- Khalili, a leading British-Iraqi physicist, resurrects this lost chapter of history, and given current East-West tensions, his book could not be timelier. With transporting detail, al-Khalili places readers in the hothouses of the Arabic Enlightenment, shows how they led to Europe's cultural awakening, and poses the question: Why did the Islamic world enter its own dark age after such a dazzling flowering?

Paradise and Paradigm Christopher Buck,1999-05-13 In a novel approach that the author terms symbolic paradigm analysis, Paradise and Paradigm offers a theoretically modular systematic comparison of two Persian religions: early Syriac Christianity as the foundation of the East Syrian Church of the East (the Nestorian Church of Persia) and the Baha'i Faith, a new world religion. The author compares the hymns of the greatest poet of early Christianity, Saint Ephrem the Syrian, and the richly imagistic writings of the founder of the Baha'i religion, Baha'u'llah. The book employs an original analytic technique in the creation of symbolic profiles constructed on Ninian Smart's dimensional model of religion. As Buck skillfully demonstrates, formal similarities between any two religions are best comprehended in terms of paradigmatic differences, which nuance all parallels through a process of symbolic transformation. Buck also shows the communal reflexivity of paradise imagery in representing the ideal faith-community in both traditions.

The Periodic Table: Nature's Building Blocks J. Theo Kloprogge,Concepcion P. Ponce,Tom Loomis,2020-11-18 The Periodic Table: Nature's Building Blocks: An Introduction to the Naturally Occurring Elements, Their Origins and Their Uses addresses how minerals and their elements are used, where the elements come from in nature, and their applications in modern society. The book is structured in a logical way using the periodic table as its outline. It begins with an introduction of the history of the periodic table and a short introduction to mineralogy. Element sections contain their history, how they were discovered, and a description of the minerals that contain the element. Sections conclude with our current use of each element. Abundant color photos of some of the most characteristic minerals containing the element accompany the discussion. Ideal for students and researchers working in inorganic chemistry, mineralogy and geology, this book provides the foundational knowledge needed for successful study and work in this exciting area. Describes the link between geology, minerals and chemistry to show how chemistry relies on elements from nature Emphasizes the connection between geology, mineralogy and daily life, showing how minerals contribute to the things we use and in our modern economy Contains abundant color photos of each mineral that bring the periodic table to life

Advances in Materials Processing Yafang Han,2018-04-18 This proceedings volume gathers selected papers presented at the Chinese Materials Conference 2017 (CMC2017), held in Yinchuan City, Ningxia, China, on July 06-12, 2017. This book covers a wide range of material surface science, advanced preparation and processing technologies of materials, high purity materials, silicon purification technology, solidification science and technology, performance and structure safety of petroleum tubular goods and equipment materials, materials genomes, materials simulation, computation and design. The Chinese Materials Conference (CMC) is the most important serial conference of the Chinese Materials Research Society (C-MRS) and has been held each year since the early 1990s. The 2017 installment included 37 Symposia covering four fields: Advances in energy and environmental materials; High performance structural materials; Fundamental research on materials; and Advanced functional materials. More than 5500 participants attended the congress, and the organizers received more than 700 technical papers. Based on the recommendations of symposium organizers and after peer reviewing, 490 papers have been included in the present proceedings, which showcase the latest original research results in the field of materials, achieved by more than 300 research groups at various universities and research institutes.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

The Bodhidharma Anthology Jeffrey L. Broughton,2023-09-01 In the early part of this century, the discovery of a walled-up cave in northwest China led to the retrieval of a lost early Ch'an (Zen) literature of the T'ang dynasty (618-907). One of the recovered Zen texts was a seven-piece collection, the Bodhidharma Anthology. Of the numerous texts attributed to Bodhidharma, this anthology is the only one generally believed to contain authentic Bodhidharma material. Jeffrey L. Broughton provides a reliable annotated translation of the Bodhidharma Anthology along with a detailed study of its nature, content, and background. His work is especially important for its rendering of the three Records, which contain some of the earliest Zen dialogues and constitute the real beginnings of Zen literature. The vivid dialogues and sayings of Master Yuan, a long-forgotten member of the Bodhidharma circle, are the hallmark of the Records. Master Yuan consistently criticizes reliance on the Dharma, on teachers, on meditative practice, and on scripture, all of which lead to self-deception and confusion, he says. According to Master Yuan, if one has spirit and does not seek anything, including the teachings of Buddhism, then one will attain the quietude of liberation. The boldness in Yuan's utterances prefigures much of the full-blown Zen tradition we recognize today. Broughton utilizes a Tibetan translation of the Bodhidharma Anthology as an informative gloss on the Chinese original. Placing the anthology within the context of the Tun-huang Zen manuscripts as a whole, he proposes a new approach to the study of Zen, one that concentrates on literary history, a genealogy of texts rather than the usual genealogy of masters.

Avian Genetics F. Cooke,P. A. Buckley,2013-09-24 Avian Genetics: A Population and Ecological Approach is a collection of papers that deals with the study of birds in relation to the synthetic theory of evolution. This book studies the ecology, demography, behavior, and geographical distribution of birds; the text also discusses quantitative, chromosomal, biochemical, and population genetics. Part I reviews the various genetic interactions, including an analysis of DNA sequence variation. The different and newer techniques are compared such as the works of Sibley, Quinn, and White. Part II describes the molding genetic variation and covers topics such as inbreeding; gene flow and the genetic structure of populations; non-random mating; and the process of selection in natural populations of birds. Part III covers actual genetic case histories, including quantitative ecological genetics of great tits; genetic evolution of house sparrows; and presentation of evidence for sexual selection by female choice in the Arctic Skua. This book also presents future research in subjects such as the neutrality-selection controversy or genetics and conservation. This text can be beneficial for ecologists, ornithologists, animal conservationists, and population biologists studying birds.

Zero-Carbon Energy Kyoto 2009 Takeshi Yao,2010-03-25 Emissions of CO2 have come to be regarded as the main factor in climate change in recent years, and how to control them has become a pressing issue. The problem cannot simply be labeled a technological one, however, because it is deeply involved with social and economic issues. Since 2008, the Global Center of Excellence (COE) program titled "Energy Science in the Age of Global Warming—Toward a CO2 Zero-Emission Energy System" has been held at Kyoto University, Japan. The program aims to establish an international education and research platform to foster educators, researchers, and policy makers who can develop technologies and propose policies toward a zero-emission society by the year 2100. Setting out a zero-emission technology roadmap, Global COE promotes socioeconomic studies of energy, the study of new technologies for renewable energies, and research in advanced nuclear energy. A compilation of the lectures and presentations from the first symposium of Global COE held at Kyoto University, this book is intended to provide the impetus for the establishment of low carbon energy science to bring about harmony between mankind and the environment.

The Polar Cusp J.A. Holtet,A. Egeland,2012-12-06 These proceedings are based upon introductory talks, research reports and discussions from the NATO Advanced Workshop on the Morphology and Dynamics of the Polar Cusp, held at Lillehammer, Norway, 7-12 May, 1984. The upper atmosphere at high latitudes is called the Earth's win dow to outer space. Through various electrodynamic coupling process es as well as through direct transfer of particles many geophysical effects displayed there are direct manifestations of phenomena occurring in the deep space. The high latitude ionosphere will also exert a feedback on the regions of the magnetosphere and atmosphere to which it is coupled, acting as a momentum and energy source and sink, and a source of particles. Of particular interest are the sections of the near space known as the Polar Cusp. A vast portion of the earth's magnetic field envelope is electrically connected to these regions. This geometry results in a spatial mapping of the magnetospheric pro cesses and a focusing on to the ionosphere. In the Polar Cusps the solar wind plasma has also direct access to the upper atmosphere. The polar regions are thus of extreme importance when it comes to under standing the physical processes in the near space and their effect on our environment. The Introductory Talks given at this workshop provided a common background for discussing and understanding the physics of the Polar Cusp. By this book we will make the information which thus was provid ed to the participants of the workshop accessible to a wider audience.
