Proceedings of the 33rd International MATADOR Conference David R. Hayhurst, 2012-12-06 by Conference Chairman n1 It is my pleasure to introduce this volume of Proceedings for the 33 MATADOR Conference. The Proceedings include 83 refereed papers submitted from 19 countries on 4 continents. 00 The spread of papers in this volume reflects four developments since the 32 MATADOR Conference in 1997: (i) the power of information technology to integrate the management and control of manufacturing systems; (ii) international manufacturing enterprises; (iii) the use of computers to integrate different aspects of manufacturing technology; and, (iv) new manufacturing technologies. New developments in the manufacturing systems area are globalisation and the use of the Web to achieve virtual enterprises. In manufacturing technology the potential of the following processes is being realised: rapid prototyping, laser processing, high-speed machining, and high-speed machine tool design. And, at the same time in the area of controls and automation, the flexibility and integration ability of open architecture computer controllers are creating a wide range of opportunities for novel solutions. Up-to-date research results in these and other areas are presented in this volume. The Proceedings reflect the truly international nature of this Conference and the way in which original research results are both collected and disseminated. The volume does not, however, record the rich debate and extensive scientific discussion which took place during the Conference. I trust that you will find this volume to be a permanent record of some of the research carried out in the last two years; and.

Fabrication avancée et méthodes industrielles Christian Mascle, Walery Wygowski, 2013 Dans le domaine industriel, le mot « Innovation » évoque souvent l'idée de nouveau produit et de compétitivité, et donc de productivité, de qualité, d'adaptabilité et de responsabilité. Cette innovation est parfois celle des produits eux-mêmes, mais plus couramment dans l'industrie, elle se situe dans l'évolution des moyens employés pour la production de ces objets, c'est-à-dire dans le passage vers des procédés et des méthodes de fabrication de pointe. C'est dans cette optique de recherche de la performance, tant dans la fabrication industrielle que dans l'industrialisation des produits, que s'inscrit Fabrication avancée et méthodes industrielles - Du dossier produit au dossier fabrication. Comment comprendre la réalité de la fabrication industrielle et du travail du bureau des méthodes ? Comment transformer des matières premières minérales en produits fabriqués fonctionnels ? Enfin, comment élaborer le dossier de fabrication à partir du dossier produit issu du bureau d'études ? C'est ce que le lecteur apprendra en parcourant les différents chapitres des deux tomes de ce livre : compétitivité industrielle, qualité des produits et respect de la norme ISO 9000, gabarits de contrôle des pièces, procédés d'obtention et calculs d'une pièce brute, procédés d'usinage, précision, état de surface, fiabilité technologique, mesures de la productivité, calcul des coûts de fabrication, montages d'usinage, processus et analyse de fabrication, charte de tolérances, procédés d'assemblage conventionnels et non conventionnels. Ce livre unique en français couvre l'ensemble des étapes de fabrication des produits, de l'élaboration de leur brut à leur assemblage. Il propose une description de l'ensemble des procédés et fournit les outils pour calculer les principaux paramètres d'élaboration des pièces et en assurer le contrôle. Il est destiné aux étudiants en génie mécanique, mais aussi aux ingénieurs praticiens qui sont aux prises avec des problèmes d'industrialisation de produits ou de fiabilité de machines de production.
