Personal VPN Setup Kenan YAMAN, 2021-01-01 The importance of the Internet in today's world and arguably as much. Internet, which was seen as a luxury in the past, has become an indispensable element of modern life today. Even young people and individuals who meet the internet at a late age have become able to use the internet. The usage and benefits of the internet are increasing day by day. Many devices that we use during our daily lives are now a device that can connect to the internet. However, privacy and security issues come to the fore. Now every individual should take the necessary precautions for their privacy and security and become conscious about this issue. VPN services are one of the many applications that we can personally provide when it comes to privacy and security. You may have seen a lot of VPN advertisements while surfing the internet, people who do not know may be curious and have researched the VPN service, people who know the VPN service may have researched companies that provide VPN service in line with their needs and have come to the stage of using one they trust. Either way, something has caught your attention, many companies offer paid and free VPN services, and they constantly emphasize that they have the best of this service. Is this statement really true? How safe is it to entrust all our internet traffic to a company we do not know? How much can you trust companies? Many more question marks like this come to mind. So instead of buying a VPN service, can we have a personal and more secure VPN by setting up our own VPN server? Yes, this is possible. The purpose of this e book, including any information about computer users who are not prepared to be able to easily set up a personal VPN server. For a low-cost and secure VPN, you can set up and start using your own VPN server.
