Supporting Requirements Communication for Shared Understanding by Applying Vision Videos in Requirements Engineering Oliver Karras ,2021-05-15 Requirements engineering (RE) has the overall goal of establishing the vision of the system in its relevant context. For this goal, all stakeholders must disclose, discuss, and align their mental models of the system by explicitly communicating their goals, ideas, needs, and expectations. This procedure serves to develop and negotiate a shared understanding and is called requirements communication. In this thesis, I analyze the application of videos as a documentation option in RE to support effective requirements communication for shared understanding. Videos used for this purpose are called vision videos. Based on a technology transfer process, I develop a candidate solution consisting of the two concepts video as a by-product and awareness and guidance. The first concept supports the revision of RE practices by integrating video production and use to obtain videos as a by-product with low effort and sufficient quality. The second concept helps software professionals with video production and use by creating awareness regarding video quality and providing guidance on how to proceed. Each concept is first validated in academia before the entire candidate solution is validated in a case study in the industry. The findings from academia and industry indicate that the candidate solution helps software professionals to gain the required awareness, knowledge, and ability to produce and use vision videos at moderate costs and with sufficient quality. These videos are suitable for the intended purpose of supporting requirements communication for shared understanding.

Video Marketing Made Simple For Business Owners Raymond Wayne,2020-09-18 Video Marketing is literally on fire! Embrace the Power and Potential of Video Marketing And use this medium to catapult your web business to the next level. Check out on “ Video Marketing Made Simple For Business Owners ” Finally, you have this once in lifetime opportunity to get your hands on the video marketing tools & Strategies that are generating million dollar revenues . Businesses invest a lot of time determining who their target demographic is, and for good reason. When a business knows which demographic is buying and using their product, it’s going to be easier to market to that demographic. Middle-aged women are going to respond to ads differently than millennials; and what one group finds engaging and interesting, another may not. So it’s important for businesses to understand what demographic they are targeting so they get the marketing just right for them. But, businesses don’t have to go to such trouble when they’re using video marketing because video marketing reaches every demographic and is interesting to every demographic. And this is because men and women, and people of every age, love video. As long as it’s interesting and creative, people will like a video regardless of their background or history. This can be a bonus for businesses that know who their demographic is, simply because more people will share it and like it, even if they don’t make up part of the business’ demographic. But it’s also especially good news for businesses with a shifting demographic, or for those that don’t know how makes up their demographic. That happens sometimes when a business changes directions or changes their product or service slightly, and then they have to start back at square one with their marketing efforts. But when a business has already created videos as part of their marketing plan, they don’t have to change a thing because those videos will already be suitable for every demographic. Imagine one type of marketing that appeals to every single demographic. It seems too good to be true, but it’s not. That type of marketing is video marketing, and reaching every demographic is just one very good reason why every business should be investing in it.

Robust Methods for the Analysis of Images and Videos for Fisheries Stock Assessment National Research Council, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Committee on Applied and Theoretical Statistics, 2015-02-24 The National Marine Fisheries Service (NMFS) is responsible for the stewardship of the nation's living marine resources and their habitat. As part of this charge, NMFS conducts stock assessments of the abundance and composition of fish stocks in several bodies of water. At present, stock assessments rely heavily on human data-gathering and analysis. Automatic means of fish stock assessments are appealing because they offer the potential to improve efficiency and reduce human workload and perhaps develop higher-fidelity measurements. The use of images and video, when accompanied by appropriate statistical analyses of the inferred data, is of increasing importance for estimating the abundance of species and their age distributions. Robust Methods for the Analysis of Images and Videos for Fisheries Stock Assessment is the summary of a workshop convened by the National Research Council Committee on Applied and Theoretical Statistics to discuss analysis techniques for images and videos for fisheries stock assessment. Experts from diverse communities shared perspective about the most efficient path toward improved automation of visual information and discussed both near-term and long-term goals that can be achieved through research and development efforts. This report is a record of the presentations and discussions of this event.
