Shark Tracker: Confessions of an Underwater Cameraman Richard Fitzpatrick,2016 Ever wondered what it would be like to be up close and personal with a constipated shark? Thought about keeping a great white as a pet? Or fantasised about naming a deadly animal after your ex? Richard 'Shark Tracker' Fitzpatrick, who wrangles sharks and other deadly marine creatures for a living, has done all this and more.

Endless Sun-Filled Days E Kevin King,2019-07-29 Shark Trackers - Hard work, no pay, and embarrassing conditions could not deter a young Woods Hole artist from signing on as the ship's mechanic to his first oceanographic expedition out to the blue waters of the Atlantic Ocean. Our hero Calvin Landry finds himself seasick, over his head in science, and head over heels for a member of the scientific crew, biologist Dr. Jonelle Kelly, an alluring, able-bodied, accomplished shark tracker. Science turns to romance, adventure, and heroic rescue. Endless Sun-Filled Days is a fictional memoir of E.K. King's first shark tracking cruise with Woods Hole Oceanographic Institution scientist Dr. Frank Carey, who was a pioneer in acoustic fish tracking and considered a world's authority on the physiology, behavior, and ecology of the great migrating fishes of the sea-among them tuna, sharks, and swordfish. In 1979 Dr. Carey recorded the first internal body temperature measurements of the great white shark.

Shark Bait! Jeff Szpirglas,Danielle Saint-Onge,2021-04-13 Shark-obsessed Orly spends every summer with her family on the coast. This year her parents have signed her up for sailing lessons, hoping to teach her some water safety while they're busy with her baby brother. Orly is excited to be on the water, but she has other ideas about how she's going to spend her time there: rather than learning to tie knots and batten down the hatches, she's going to use her tablet to track Delta, a great white shark known to frequent the area. Orly's misplaced enthusiasm repeatedly gets her in hot water with her instructor. Can Orly redeem herself with her sailing crew when she has a chance to use her shark-tracking skills to save some actual wildlife in danger?

Chasing Shadows Greg Skomal,Ret Talbot,2023-07-11 “At last: the story of tracking the ocean’s most charismatic and controversial predator, compellingly told by the man who has learned more about the Atlantic great white shark than any other person alive. You must not miss this fantastic book!” —Sy Montgomery, New York Times bestselling author of *The Soul of an Octopus* Dr. Greg Skomal, one of the leading great white shark experts in the country, reveals the true nature of these mysterious apex predators, as well as the fascinating story behind their history and startling resurgence With its quaint villages, local restaurants serving up lobster rolls, and miles and miles of warm, sandy beaches, Cape Cod, Massachusetts, is famous for being America’s carefree seaside getaway. But in August 2012, the first confirmed white shark attack in almost eighty years occurred in the region. As shark sightings quickly began to increase on Cape Cod and elsewhere, and large beachside billboards warning about the growing shark population became a common sight, a boogie boarder died after being attacked by a great white shark in Cape Cod’s shallow waters. What had changed to cause news of human-shark interactions to go from being a rarity to being the new normal? As some citizens called for shark culls, nets, drone surveillance, and other extreme solutions, interactions between local residents and scientists, politicians, and those responsible for public safety became tense and frantic. Dr. Greg Skomal, a shark biologist whose lifelong passion has been to gain a more refined understanding of great white sharks, was at the center of it all. This is the story of the great white shark’s return to the eastern seaboard, told through the life of the scientist who found himself in the oftentimes thankless position of having to balance conservation efforts and the drive to do important science with panic and fear in the court of public opinion. Greg has spent decades on a quest to tag, track, and demystify this animal, using every high- and low-tech method at his disposal, including those he invented, and he frequently comes face-to-face with these shadows of the deep. He leaves no stone unturned in his pursuit of the secrets behind the largely unknown lives of these charismatic creatures and in his duty to solve the intricate puzzle of how humans can coexist alongside them. *Chasing Shadows* is a too-rare conservation success story about restoring an apex predator to an ecosystem that provides a profound, new understanding of a beast so notoriously fierce that it’s nearly impossible to imagine how vulnerable it truly is.

Bird of Passage E. K. King,2010-06 Hard work, no pay and embarrassing conditions couldn't deter a young Woods Hole artist from signing on as the ship's mechanic and harpooner. With endless sun-filled days at sea and steamy summer nights on shore, he finds adventure, romance, and a new calling -- shark tracker.

Shark Quest Karen Romano Young,2018-08-01 Sharks are in trouble. Fifty shark species are at high risk of extinction, and another sixty-three are threatened. These intelligent, mysterious—and sometimes scary—fish evolved about 420 million years ago. They have adapted to survive deep in the ocean and in shallow-water habitats. Commercial fishing and finning are threatening shark populations. So is water pollution. Marine biologists and others, including young people, are working together to save these fascinating predators. Discover the work of scientists and conservationists as they study shark biology and morphology; research migration, feeding, and mating patterns; delve into human, climate, and other threats to shark habitat; and develop sophisticated technologies to aid sharks and shark research. See how scientists also educate the public about real and imagined fear of sharks and encourage citizen participation in shark conservation efforts. Learn about high-tech tagging for tracking shark migration paths. Discover the autonomous underwater vehicles and drones that divers use to observe and photograph sharks up close. Visit shark sanctuaries in the South Pacific Ocean. You'll even meet the Shark Lady, a.k.a. Eugenie Clark, a pioneer ichthyologist (shark scientist). Through research and advocacy, people around the world are working to protect—and admire—sharks. [A]n engaging, well-researched book about a much maligned species of fish that deserves our protection.—Booklist A remarkably thorough tour of the world of sharks and marine scientists' efforts to educate the public about our ocean's apex predators.—Kirkus Reviews

Sexing the Animal in a Post-Humanist World Roslyn Appleby, 2019-05-15 This pioneering collection of essays unpacks the complex discursive and embodied relationships between humans and animals, contributing to a more informed understanding of both human-animal relations and the role of language in social processes. Focusing on the example of shark-human interactions, the book draws on forms of analysis from multimodality and critical discourse studies to examine the representations of this relationship across visual arts, popular media, and the natural sciences, each viewed through a critical feminist lens. The combined effect highlights the significance of the emergent turn to post-humanism in applied linguistics and its role in fostering more engaged discussions around broader contemporary social issues, including environmental degradation and climate change on the one hand, and resurgent feminism and challenges to normative heterosexuality on the other. Paving the way for new forms of writing and language for a post-anthropocentric age, this volume is essential reading for students and scholars in applied linguistics, gender studies, sociolinguistics, human-animal studies, and environmental humanities.

Swimming with Sharks / Track Attack Betty Hicks, 2010-04-13 Swimming with Sharks Rita's times aren't fast enough to swim for the Sharks with her friends. To improve she must learn flip turns, but every time she tries, she gets water up her nose! Jazz has an idea that might be the key to Rita's success, but what if Rita comes in first on a slower team? Would she rather win or be with her friends? Or is there another way for Rita to swim with the Sharks? Track Attack Jazz loves being on a track team where she sprints fast as a lightning bolt. Her dad loves that she's on the team, too. He's her biggest fan—maybe too big a fan. He argues with the coach, yells at the ref, and screams his head off at every meet. Jazz loves to run, but can she focus on the race while Dad is having a track attack?

Electronic Tagging and Tracking in Marine Fisheries John R. Sibert, Jennifer L. Nielsen, 2013-03-09 Reviews: Methods and Technology in Fish Biology and Fisheries published by Kluwer Academic Publishers is a book series dedicated to the publication of information on advanced, forward-looking methodologies, technologies, or perspectives in fish and is especially dedicated to relevant topics addressing global, fisheries. This series international concern in fish and fisheries. Humans continue to challenge our environments with new technologies and technological applications. The dynamic creativity of our own species often tends to place the greatest burden on our supporting ecosystems. This is especially true for aquatic networks of creeks, lakes, rivers and ocean environments. We also frequently use our conceptual powers to balance conflicting requirements and demands on nature and continue to develop new approaches and tools to provide sustainable resources as well as conserve what we hold most dear on local and global scales. This book series will provide a window into the developing dynamic among humans, aquatic ecosystems (both freshwater and marine), and the organisms that inhabit aquatic environments. There are many reasons to doubt the increasing social and economic value technology has gained over the last two centuries. Science and technology represent stages in human development. I agree with Ernst Mayer when he said in *Toward a New Philosophy of Biology* (1988) that endeavors to solve all scientific problems by pure logic and refined measurements are unproductive, if not totally irrelevant.

Sharks in the Arts Vivienne Westbrook, Shaun Collin, Dean Crawford, Mark Nicholls, 2018-05-11 This book is the most thorough exploration to date of the many ways in which a wild creature has been absorbed, reimagined and represented across the ages in all of the major art forms. The authors consider not only how the identity of sharks in the natural environment became incorporated into a cultural environment but also how sharks came to be considered the most feared creatures in the open oceans as a consequence of this incorporation. Yet sharks are especially important in helping to maintain a balance that is essential to the health of the oceans. The book begins with a treatment of the three sharks at the top of global shark-attack files from scientific, economic and environmental perspectives. Subsequent chapters engage with cultural representations of sharks in poetry, drama, art, novels, screenplay adaptations and films. Through an exploration of the ways in which sharks have been represented in human culture through the centuries, this book alerts the global community to the importance of sharks as a common cultural heritage. It aims to change perceptions of sharks so that they can become more revered than feared. The authors of this book argue that an increased understanding of sharks should lead to the development of better strategies for shark and human interactions. This book will be of great interest to researchers and students of the Environmental Humanities, Cultural History and the Arts. It is also excellent supplementary reading for courses in Zoology and Marine Science.

Shark Attacks Alex MacCormick, 1998-07-15 Based on first-hand accounts of survivors, here are terrifying true accounts of shark attacks worldwide--with photos.

The Secret Life of Sharks A. Peter Klimley, 2008-06-17 Marine biologist Pete Klimley swims with the sharks. He was one of the first scientists to free-dive among sharks, and he has spent nearly thirty years studying shark behavior, sometimes swimming in schools of several hundred sharks. From his firsthand observations he has learned that sharks are not the vicious man-eaters that we imagine, but fascinating animals with complex behaviors. Most people who think of sharks at all think immediately of great white sharks. But there are more than four hundred species of shark. Dr. Klimley has studied several species, most notably the great white and the hammerhead. (He describes the great white as the athlete among sharks, and the hammerhead as the Ph.D. of the shark world.) In *The Secret Life of Sharks* Dr. Klimley reveals the significant discoveries he made about hammerhead navigation and great white eating habits. By studying hammerheads gathered around underwater seamounts, Dr. Klimley learned that hammerheads rely on sophisticated tracking of ocean-floor magnetism to navigate. His long-term study of great white sharks off the California coast demonstrated that these huge sharks prefer to eat seals and sea lions because of the energy contained in their fatty bodies. They are selective eaters, not the man-eaters we expect, and they sometimes go weeks between meals. But Dr. Klimley did observe a ritualized behavior that great whites practice in order to avoid deadly disputes over prey that one shark has captured and another wants. Although we have learned a great deal about shark behavior, says Dr. Klimley, there is much that we do not know. Unfortunately we are destroying these magnificent creatures of the deep through overfishing and degradation of the oceans. Already some populations of sharks have declined steeply. Vividly written by one of the foremost authorities on sharks, *The Secret Life of Sharks* is a fascinating account of some of the world's most magnificent animals.
