**Live Cell Assays** Christophe Furger,2016-07-14 Cell assays include all methods of measurements on living cells. Confined for a long time to research laboratories, these emerging methods have, in recent years, found industrial applications that are increasingly varied and, from now on, regulatory. Based on the recent explosion of knowledge in cell biology, the measurement of living cells represents a new class of industry-oriented research tests, the applications of which continue to multiply (pharmaceuticals, cosmetics, environment, etc.). Cellular tests are now being positioned as new tools at the interface between chemical methods, which are often obsolete and not very informative, and methods using animal models, which are expensive, do not fit with human data and are widely discussed from an ethical perspective. Finally, the development of cell assays is currently being strengthened by their being put into regulatory application, particularly in Europe through the REACH (Registration, Evaluation, Authorisation and Restriction of Chemicals) and cosmetic directives.

**Cell Membrane Nanodomains** Alessandra Cambi, Diane S. Lidke, 2014-10-27 Cell Membrane Nanodomains: From Biochemistry to Nanoscopy describes recent advances in our understanding of membrane organization, with a particular focus on the cutting-edge imaging techniques that are making these new discoveries possible. With contributions from pioneers in the field, the book explores areas where the application of these novel techniques reveals new concepts in biology. It assembles a collection of works where the integration of membrane biology and microscopy emphasizes the interdisciplinary nature of this exciting field. Beginning with a broad description of membrane organization, including seminal work on lipid partitioning in model systems and the roles of proteins in membrane organization, the book examines how lipids and membrane compartmentalization can regulate protein function and signal transduction. It then focuses on recent advances in imaging techniques

and tools that foster further advances in our understanding of signaling nanoplateforms. The coverage includes several diffraction-limited imaging techniques that allow for measurements of protein distribution/clustering and membrane curvature in living cells, new fluorescent proteins, novel Laurdan analyses, and the toolbox of labeling possibilities with organic dyes. Since superresolution optical techniques have been crucial to advancing our understanding of cellular structure and protein behavior, the book concludes with a discussion of technologies that are enabling the visualization of lipids, proteins, and other molecular components at unprecedented spatiotemporal resolution. It also explains the ins and outs of the rapidly developing high- or superresolution microscopy field, including new methods and data analysis tools that exclusively pertain to these techniques. This integration of membrane biology and advanced imaging techniques emphasizes the interdisciplinary nature of this exciting field. The array of contributions from leading world experts makes this book a valuable tool for the visualization of signaling nanoplateforms by means of cutting-edge optical microscopy tools.

How Nature Works Per Bak, 2013-11-11 Self-organized criticality, the spontaneous development of systems to a critical state, is the first general theory of complex systems with a firm mathematical basis. This theory describes how many seemingly desperate aspects of the world, from stock market crashes to mass extinctions, avalanches to solar flares, all share a

set of simple, easily described properties. ...a'must read'...Bak writes with such ease and lucidity, and his ideas are so intriguing...essential reading for those interested in complex systems...it will reward a sufficiently skeptical reader. -NATURE ...presents the theory (self-organized criticality) in a form easily absorbed by the non-mathematically inclined reader. -BOSTON BOOK REVIEW I picture Bak as a kind of scientific musketeer; flamboyant, touchy, full of swagger and ready to join every fray... His book is written with panache. The style is brisk, the content stimulating. I recommend it as a bracing experience. -NEW SCIENTIST

**The Plant Cytoskeleton** Patrick J. Hussey, Pengwei Wang, 2023-02-11 This detailed volume explores the development of technologies and protocols that are currently being used to understand the nature and activities of the plant cytoskeleton. A focus for many of the chapters is on sample preparation, as the quality of plant organ/tissue preparation, from single to multicellular samples, determines the quality of the data. Written for the highly successful Methods in Molecular Biology series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step and readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, The Plant Cytoskeleton: Methods and Protocols serves as an ideal guide for researchers interested in or starting to be interested in plant cell and molecular biology research.

**Dynamics of Cell Fate Decision Mediated by the Interplay of Autophagy and Apoptosis in Cancer Cells** Iman Tavassoly,2015-02-16 This interdisciplinary thesis introduces a systems biology approach to study the cell fate decision mediated by autophagy. A mathematical model of interaction between Autophagy and Apoptosis in mammalian cells is proposed. In this dynamic model autophagy acts as a gradual response to stress (Rheostat) that delays the initiation of bistable switch of apoptosis to give the cells an opportunity to survive. The author shows that his dynamical model is consistent with existing quantitative measurements of time courses of autophagic responses to cisplatin treatment. To understand the function of this response in cancer cells, he has provided a systems biology experimental framework to study quantitative and dynamical aspects of autophagy in single cancer cells using live-cell imaging and quantitative fluorescence microscopy. This framework can provide new insights on function of autophagic response in cancer cells.

**Mechanical Integration of Plant Cells and Plants** Przemyslaw Wojtaszek,2011-06-28 Chemical reactions and interactions between molecules are commonly considered the basis of life, and thus the biochemical nature of cells and organisms is relatively well recognized. Research conducted in recent years, however, increasingly indicates that physical forces profoundly affect the functioning of life at all levels of its organization. To detect and to respond to such forces, plant cells and plants need to be structured

mechanically. This volume focuses on mechanical aspects of plant life. It starts with a consideration of the mechanical integration of supracellular structures and mechanical properties of cellular building blocks to show how the structural integrity of plant cells is achieved and maintained during growth and development. The following chapters reveal how the functioning of integrated plant cells contributes to the mechanical integration of plants, and how the latter are able to detect physical stimuli and to reorganize their own cells in response to them. The mechanical aspects of plant responses to stresses are also presented. Finally, all these aspects are placed in an evolutionary context.

**Eat, Chew, Live** John Poothullil, 2015-03-16 Diabetes is among the fastest growing diseases in the world. In the U.S. 1 in 3 adults over age 20 has high blood sugar and 1 in 4 adults over age 65 is fully diabetic. Yet, nearly every single person could avoid high blood and diabetes if they understood its real causes and *Eat, Chew, Live* provides exactly the new science & powerful inspiration to help people prevent this serious disease from altering their lives "without drugs. *Eat, Chew, Live* offers a revolutionary new science-based explanation of what really happens in the body to cause high blood sugar. While traditional medicine blames the condition on insulin resistance, Dr. Poothullil disagrees, offering systematic proof of a far better biological explanation for it. According to him, diabetes is not a hormonal disease; in fact, he demonstrates that insulin resistance is not

even logical. Instead, high blood sugar and diabetes are the result of over consumption, especially of grain-based carbohydrates that cause a normal bodily metabolism--cells burning fatty acids rather than glucose--to go haywire. When people understand this insight, everything about preventing high blood sugar and diabetes becomes clear. Eat, Chew, Live goes on to present three other revolutionary ideas to help people get in tune with their body's need for nutrition, their hunger and satisfaction signals, and the causes of their overeating. Dr. Poothullil's offers insightful and persuasive advice about why avoiding complex carbohydrates even whole grain and gluten free -- is the key to losing weight and preventing high blood sugar. He goes on to teach readers how to eat mindfully, chewing fully to enjoy and savor food. Many readers report that the book helped them lose weight, get in touch with their body, and reduce their diabetes medications significantly. Eat, Chew, Live is unlike other books on diabetes, as nearly every one accepts insulin resistance as the cause. Dr. Poothullil theory is a medically sound new approach to explaining high blood sugar and the implications are enormous for the entire medical approach to treating high blood sugar with medications rather than teaching people how to eat what they enjoy to lower blood sugar. Eat, Chew, Live may be one of the most important health books of the decade, as its 4 revolutionary ideas will save many lives.

#### Light Robotics - Structure-mediated Nanobiophotonics Jesper

Glückstad,Darwin Palima,2017-05-19 Light Robotics – Structure-Mediated Nanobiophotonics covers the latest means of sculpting of both light and matter for achieving bioprobing and manipulation at the smallest scales. The synergy between photonics, nanotechnology and biotechnology spans the rapidly growing field of nanobiophotonics. Nanoscale resolutions enable optical scientists to assess ever more accurate information. However, scientific hypothesis testing demands tools, not only for observing nanoscopic phenomena, but also for reaching into and manipulating nanoscale constituents. Taking an application based focus, this book explores how nanophotonics can productively be used in both the biomedical and life sciences, allowing readers to clearly see how structure-mediated nanobiophotonics can be used to increase our engineering toolbox for biology at the smallest scales. This book will be of great use to researchers and scientists working in the fields of optics and photonics. It will also be of

great value to those working in the field of biotechnology, showcasing how nanotechnology can help provide new, effective ways to solve biomedical problems. Presents cutting-edge research on the principles, mechanisms, optical techniques, fabrication, modeling, devices and applications of nanobiophotonics Brings together the diverse field of structure-mediated nanobiophotonics into one coherent volume Showcases how nanophotonics can be used to create new, more effective micro- and nano-biodevices

**Engineered Cell Manipulation for Biomedical Application** Misturu

Akashi, Takami Akagi, Michiya Matsusaki, 2014-10-16 This book is the first to summarize new technologies for engineered cell manipulation. The contents focus on control of cellular functions by nanomaterials and control of three-dimensional cell-cell interactions. Control of cellular functions is important for cell differentiation, maturation, and activation, which generally are controlled by the addition of soluble cytokines or growth factors into cell culture dishes. Target antigen molecules can be efficiently delivered to the cytosol of the dendritic cells using the nanoparticle technique described here, and cellular functions such as dendritic cell maturation can be controlled easily and with precision. This book describes basic preparation of the nanoparticles, activation control of dendritic cells, immune function control, and in vivo application for various vaccination systems. The second type of control, that of cell-cell interaction, is important for tissue engineering in order to develop three-

dimensional cellular constructs. To achieve in vitro engineering of three-dimensional human tissue constructs, cell-cell interaction must be controlled in three dimensions, but typical biological cell manipulation technique cannot accomplish this task. An engineered cell manipulation technique is necessary. In this book the authors describe the fabrication of nanofilms onto cell surfaces, development of three-dimensional cellular multilayers, and various applications of the cellular multilayers as three-dimensional human models. This important work will be highly informative for researchers and students in the fields of materials science, polymer science, biomaterials, medicinal science, nanotechnology, biotechnology, and biology.
