From Space in Modern Art to a Spatial Art History Jutta Vinzent,2019-12-02 This book traces artists' theories of constructive space in the first half of the twentieth century. Drawing on these concepts and recent theories on space, it develops a methodology termed 'Spatial Art History' that conceives of artworks as physical spatio-temporal things, which produce the social, to overcome the reductive understanding of art as a mere mirror or facilitator of society.

The Commercial Space Station Andrew M. Thorpe,2007-08-28 By 2016, the International Space Station will face retirement. What then? When colonizing space, NASA blazes the trails, but private industry must build the roads. For common citizens to inhabit space, there must be a station in near Earth orbit, only 400 miles high, where dedicated commercial activities can take place. It will be a hub of commerce where industrial scientists can perform chemistry and biology, tourists can have lavish vacations, solar power stations can be built and serviced, and where satellites can be tested and deployed. This is now within the grasp of several businesses that are determined to see this vision through. The commercialization of low Earth orbit can free NASA, and the other space agencies around the world, to colonize the Moon and Mars. In fact, these agencies will be some of the first customers on an industrial facility in space. The commercial space station can be the crucible from which a new economy is forged, where better medicines, cleaner energy sources, stronger materials, and wider human experiences can be realized. These space stations are being deployed now. They will do practical, useful things in space for the common good of taxpayers. They will be new tools in the fight to solve medical and environmental problems to come. And they will provide jobs and tax revenue. The 21st century will be an industrial space century where average citizens can participate as entrepreneurs or customers.

Our Space Environment, Opportunities, Stakes and Dangers Claude Nicollier,Roger-Maurice Bonnet,2016-02-03 The space surrounding our planet is full of opportunities and resources. Ranging from a hundred to a few thousand kilometers around Earth, our space-neighborhood offers an excellent vantage point to the universe, and a great opportunity to push the frontiers of science and knowledge. Manned missions advance research on human biology, health, and life in microgravity conditions. Satellite technologies gather essential data to better understand and manage our home planet by monitoring Earth's environmental changes. Extraordinary developments in telecommunications and navigation are now indispensable to everyday life, and we cannot underestimate the emerging industry of space-tourism or the boom in projects to explore more distant planets such as Mars. But space also means risk. What is the real threat of meteorites? How much debris – from old rocket stages to mere flakes of paint – has been left there since space exploration began? How serious is this problem today? What is the risk of solar flares and particle bursts? How does our own Sun influence our climate? And what about the danger of cosmic radiation for humans and devices stationed beyond our atmosphere? By tackling a wide range of topics, this book aims to give a comprehensive overview of the opportunities and hazards in our immediate space environment. It also exposes the challenges that governments, space agencies, private companies, and human communities have to face in order to manage space together to create long-term and safe access to it, while protecting life on Earth.

Psychology of Space Perception Elbert Marcus Stevens,1915

Space on Earth Dave Williams,2023-05-25 Really “high” tech to inspire us for sustainable solutions on Earth. Who could imagine an idea born on a space station would help sustain our planet? Astronauts, living on the International Space Station, have to protect their resources because their lives depend on it. They learn to conserve water, air, food, energy, and waste. These efforts have in turn lead to amazing and innovative ideas for air quality, food production, and water purification here on Earth. With vivid, energetic illustrations, photographs, and Dr. Dave's experiments on key topics, readers learn about technological innovations such as waterless toilets and the world's tallest air purification tower.

Homesteading Space David Hitt,Owen K. Garriott,Joe Kerwin,2008-01-01 As the United States and the Soviet Union went from exploring space to living in it, a space station was conceived as the logical successor to the Apollo moon program. But between conception and execution there was the vastness of space itself, to say nothing of monumental technological challenges. Homesteading Space, by two of Skylab's own astronauts and a NASA journalist, tells the dramatic story of America's first space station from beginning to fiery end. Homesteading Space is much more than a story of technological and scientific success; it is also an absorbing, sometimes humorous, often inspiring account of the determined, hardworking individuals who shepherded the program through a near-disastrous launch, a heroic rescue, and an exhausting study of Comet Kohoutek, as well as the lab's ultimate descent into the Indian Ocean. Featuring the unpublished in-flight diary of astronaut Alan Bean, the book is replete with the personal recollections and experiences of the Skylab crew and those who worked with them in training, during the mission, and in bringing them safely home.

Space Safety and Human Performance Barbara G. Kanki,Jean-Francois Clervoy,Gro Sandal,2017-11-10 Space Safety and Human Performance provides a comprehensive reference for engineers and technical managers within aerospace and high technology companies, space agencies, operators, and consulting firms. The book draws upon the expertise of the world's leading experts in the field and focuses primarily on humans in spaceflight, but also covers operators of control centers on the ground and behavior aspects of complex organizations, thus addressing the entire spectrum of space actors. During spaceflight, human performance can be deeply affected by physical, psychological and psychosocial stressors. Strict selection, intensive training and adequate operational rules are used to fight performance degradation and prepare individuals and teams to effectively manage systems failures and challenging emergencies. The book is endorsed by the International Association for the Advancement of Space Safety (IAASS). Provides information on critical aspects of human performance in space missions Addresses the issue of human performance, from physical and psychosocial stressors that can degrade performance, to selection and training principles and techniques to enhance performance Brings together essential material on: cognition and human error; advanced analysis methods such as human reliability analysis; environmental challenges and human performance in space missions; critical human factors and man/machine interfaces in space systems design; crew selection and training; and organizational behavior and safety culture Includes an endorsement by the International Association for the Advancement of Space Safety (IAASS)

Sound and Sight Meow Goh,2010-08-24 This is the first book to examine Chinese poetry and courtier culture using the concept of shengse—sound and sight—which connotes sensual pleasure. Under the moral and political imperative to avoid or even eliminate representations of sense perception, premodern Chinese commentators treated overt displays of artistry with great suspicion, and their influence is still alive in modern and contemporary constructions of literary and cultural history. The Yongming poets, who openly extolled sound and rhymes, have been deemed the main instigators of a poetic trend toward the sensual. Situating them within the court milieu of their day, Meow Hui Goh asks a simple question: What did shengse mean to the Yongming poets? By unraveling the aural and visual experiences encapsulated in their poems, she argues that their pursuit of sound and sight reveals a complex confluence of Buddhist influence, Confucian value, and new sociopolitical conditions. Her study challenges the old perception of the Yongming poets and the common practice of reading classical Chinese poems for semantic meaning only.

Space, Place, and Violence James A. Tyner,2012-05-02 Direct, interpersonal violence is a pervasive, yet often mundane feature of our day-to-day lives; paradoxically, violence is both ordinary and extraordinary. Violence, in other words, is often hidden in plain sight. Space, Place, and Violence seeks to uncover that which is too apparent: to critically question both violent geographies and the geographies of violence. With a focus on direct violence, this book situates violent acts within the context of broader political and structural conditions. Violence, it is argued, is both a social and spatial practice. Adopting a geographic perspective, Space, Place, and Violence provides a critical reading of how violence takes place and also produces place. Specifically, four spatial vignettes – home, school, streets, and community – are introduced, designed so that students may think critically how ‘race’, sex, gender, and class inform violent geographies and geographies of violence.

Space, Time and Architecture Sigfried Giedion,1967 A classic first published in 1941, this is an unparalleled work on the shaping of our architectural environment. In his discussions of leading architects and styles, Giedion examines the evolving of new traditions; the strengthening of its plastic tendencies and conditions for further evolution; the urban renewal boom of the fifties; and the development of regionalism by creatively oriented architects.

Chaucer and the Making of Optical Space Peter Brown,2007 The author links Chaucer's writings with the medieval optical tradition in its various forms (scholastic texts, encyclopedias, exempla, vernacular poetry) both in general cultural terms and through the discussion of specific examples. He shows how the science of optics, or perspectiva, provides an account of spatial perception, including visual error, and demonstrates how these aspects of optical theory impact on Chaucer's poetry. He provides detailed and sustained analysis of the spatial content of narratives across the range of Chaucer's works, relating them to optical ideas and making use of Lefebvre's theory of the production of space. The texts discussed include the Book of the Duchess, House of Fame, Knight's Tale, Miller's Tale, Reeve's Tale, Merchant's Tale, Squire's Tale and Troilus and Criseyde.

Space-Shuttle, Mayday! Richard Earl Hansen,1996-12-19 This is a book of poetry; about the nuances of romantic love. About the struggle of love. About the surrender of love. About the excitement, myriad passageways and the civil war of love. It's about tender confusion and the invention of love. About formalities and prohibitions that hide the heart and hold us away from love. It's about the map of Brazil discovered in a Santa Fe hotel room.
