Real Estate Riches Ku Swee Yong, 2011-05-15 In January 2011, the Singapore government unveiled a new set of property measures to curb rising home prices. It took most market watchers by surprise mainly because of the constant reassurance that the earlier round of measures, announced in August 2010, had been effective. Were these new measures necessary? What's in store next? *Real Estate Riches: Understanding Singapore's Property Market in a Volatile Economy* brings together a collection of articles on Singapore's property market. Published in *Today* and *The Business Times*, the articles give a succinct overview of the property landscape, clarify government policies, dispel common misconceptions and put into perspective the factors to consider when buying property. New commentaries offer objective insights into the local property scene.

The Global Property Investor's Toolkit Colin Barrow, 2008-04-15 How real estate investors and speculators can take their business global The real estate boom has gone global, and those successful investors who want to keep up their profits are starting to look at emerging markets on other continents. Markets in South America, Eastern Europe, India, and Asia are currently experiencing the rapid growth that mature domestic markets experienced a few years ago. Based on the author's personal experience buying and selling dozens of overseas properties, this book provides all the relevant data investors need to evaluate properties and markets anywhere in the world. Colin Barrow (Hayle, Cornwall, UK) is a non-executive director of two venture capital funds and serves on the UK Government Task Force for Business.

Singapore at Random Susan Tsang, 2011 From chewing gum bans to bizarre courtesy campaigns to the distinctive Singaporean linguistic landscape and some of the region's most notable

personalities, Singapore at Random brings together a whole host of anecdotes, statistics, quotes, facts, recipes, folklore, and other unusual tidbits. Peppered with attractive illustrations throughout, this an irresistible celebration of the boundless diversity that makes Singapore so unique.

Simulation Tools and Methods for Supercritical Carbon Dioxide Radial Inflow Turbine

Jianhui Qi, 2023-01-01 To protect the Earth, China has launched its target of peaking carbon dioxide emissions by 2030, and achieving carbon neutrality by 2060, which greatly encourages the use and development of renewable energy. Supercritical CO₂ power cycle is a promising technology and the radial inflow turbine is the most important component of it, whose design and optimisation are considered as great challenges. This book introduces simulation tools and methods for supercritical CO₂ radial inflow turbine, including a high fidelity quasi-one-dimensional design procedure, a non-ideal compressible fluid dynamics Riemann solver within open-source CFD software OpenFOAM framework, and a multi-objective Nelder-Mead geometry optimiser. Enhanced one-dimensional loss models are presented for providing a new insight towards the preliminary design of the supercritical CO₂ radial inflow turbine. Since the flow phenomena within the blade channels are complex, involving fluid flow, shock wave transmission and boundary layer separation, only employing the ideal gas model is inadequate to predict the performance of the turbine. Thus, a non-ideal compressible fluid dynamics Riemann solver based on OpenFOAM library is developed. This book addresses the issues related to the turbine design and blade optimization and provides leading techniques. Hence, this book is of great value for the readers working on the supercritical CO₂ radial inflow turbine and understanding the knowledge of CFD and turbomachinery.

Sociocultural Research on Mathematics Education Bill Atweh, Helen Forgasz, Ben

Nebres, 2013-03-07 This volume--the first to bring together research on sociocultural aspects of

mathematics education--presents contemporary and international perspectives on social justice and equity issues that impact mathematics education. In particular, it highlights the importance of three interacting and powerful factors--gender, social, and cultural dimensions. Sociocultural Research on Mathematics Education: An International Perspective is distinguished in several ways: * It is research based. Chapters report on significant research projects; present a comprehensive and critical summary of the research findings; and offer a critical discussion of research methods and theoretical perspectives undertaken in the area. * It is future oriented, presenting recommendations for practice and policy and identifying areas for further research. * It deals with all aspects of formal and informal mathematics education and applications and all levels of formal schooling. As the context of mathematics education rapidly changes-- with an increased demand for mathematically literate citizenship; an increased awareness of issues of equity, inclusivity, and accountability; and increased efforts for globalization of curriculum development and research-- questions are being raised more than ever before about the problems of teaching and learning mathematics from a non-cognitive science perspective. This book contributes significantly to addressing such issues and answering such questions. It is especially relevant for researchers, graduate students, and policymakers in the field of mathematics education.

Computer-Aided Drug Design Dev Bukhsh Singh,2020-10-09 This book provides up-to-date information on bioinformatics tools for the discovery and development of new drug molecules. It discusses a range of computational applications, including three-dimensional modeling of protein structures, protein-ligand docking, and molecular dynamics simulation of protein-ligand complexes for identifying desirable drug candidates. It also explores computational approaches for identifying

potential drug targets and for pharmacophore modeling. Moreover, it presents structure- and ligand-based drug design tools to optimize known drugs and guide the design of new molecules. The book also describes methods for identifying small-molecule binding pockets in proteins, and summarizes the databases used to explore the essential properties of drugs, drug-like small molecules and their targets. In addition, the book highlights various tools to predict the absorption, distribution, metabolism, excretion (ADME) and toxicity (T) of potential drug candidates. Lastly, it reviews in silico tools that can facilitate vaccine design and discusses their limitations.
