The North Eastern Railway in the First World War Rob Langham, 2017-01-24 The North Eastern Railway underwent extreme change after the outbreak of war in August 1914. Within months, the company raised its own battalion of men and was the only railway company to do so. The NER also set to work adapting to the changes and requirements the war would bring. Not only would there be a drop in regular passenger traffic levels and increase in freight, transporting both war material and troops, but the workshops formerly used to build locomotives were turned over to making weapons of war. In December 1914, the railway came under attack from the Imperial German Navy, causing damage to the NER's infrastructure and killing several of its men. As the war went on, locomotives and rolling stock were sent to France to help with the enormous logistics required for operations on the Western Front. The planned opening of an electrified railway line for freight went ahead with a brand new fleet of powerful electric locomotives, adding to the company's portfolio of electrification with the electrified Tyneside passenger line and Newcastle Quayside. NER land was used to build an enormous munitions factory at Darlington and the unprecedented use of women in

the work place meant traditionally male-only roles were increasingly seeing women take over and freeing men for military service. Overseas, men of the NER that joined the forces served with honour, but many were not to come home. The North Eastern Railway in the First World War tells the story of one railway's war, of how it continued to operate and adapt, and the men and women who served with the company or left to fight for the country's freedom.

Scapa 1919 Innes McCartney, 2019-05-30 The German High Seas Fleet was one of the most powerful naval forces in the world, and had fought the pride of the Royal Navy to a stalemate at the battle of Jutland in 1916. After the armistice was signed, ending fighting in World War I, it surrendered to the British and was interned in Scapa Flow pending the outcome of the Treaty of Versailles. In June 1919, the entire fleet attempted to sink itself in the Flow to prevent it being broken up as war prizes. Of the 74 ships present, 52 sunk and 22 were prevented from doing so by circumstance and British intervention. Marine archaeologist and historian Dr Innes McCartney reveals for the first time what became of the warships that were scuttled, examining the circumstances behind the loss of each ship

and reconciling what was known at the time to what the archaeology is telling us today. This fascinating study reveals a fleet lost for nearly a century beneath the waves.

LED Packaging for Lighting Applications Sheng Liu, Xiaobing Luo, 2011-07-05 Since the first light-emitting diode (LED) was invented by Holonyak and Bevacqua in 1962, LEDs have made remarkable progress in the past few decades with the rapid development of epitaxy growth, chip design and manufacture, packaging structure, processes, and packaging materials. LEDs have superior characteristics such as high efficiency, small size, long life, low power consumption, and high reliability. The market for white LED is growing rapidly in various applications. It has been widely accepted that white LEDs will be the fourth illumination source to substitute the incandescent, fluorescent, and high-pressure sodium lamps. With the development of LED chip and packaging technologies, the efficiency of high power white LED will broaden the application markets of LEDs while changing the lighting concepts of our lives. In LED Packaging for Lighting Applications, Professors Liu and Luo cover the full spectrum of design, manufacturing, and testing. Many concepts are proposed for the first time, and readers will benefit from the concurrent engineering and co-design approaches to advanced engineering design of LED products. One of the only books to cover LEDs from package design to manufacturing to testing Focuses on the design of LED packaging and its applications such as road lights Includes design methods and experiences necessary for LED engineers, especially optical and thermal design Introduces novel LED packaging structures and manufacturing processes, such as ASLP Covers reliability considerations, the most challenging problem for the LED industry Provides measurement and testing standards, which are critical for LED development, for both LED and LED fixtures Codes and demonstrations available from the book's Companion Website This book is ideal for practicing engineers working in design or packaging at LED

companies and graduate students preparing for work in industry. This book also provides a helpful introduction for advanced undergraduates, graduates, researchers, lighting designers, and product managers interested in the fundamentals of LED design and production.
