**Text and Multimedia Messaging** Patricia Moloney Figliola,2011-06-13 The number of text messages in the U.S. has grown to over 48 billion messages every month. Additionally, text messages are no longer only sent as point-to-point communications between two mobile device users. More specifically, messages are also commonly sent from web-based applications within a web browser (e.g., from an Internet e-mailaddress) and from instant messaging clients like AIM or MSN. Text and multimedia messaging have raised issues for Congressional policymakers. **Text Mining of Web-Based Medical Content** Amy Neustein,2014-10-09 •Includes Text Mining and Natural Language Processing Methods for extracting information from electronic health records and biomedical literature. •Analyzes text analytic tools for new media such as online forums, social media posts, tweets and video sharing. •Demonstrates how to use speech and audio technologies for improving access to online content for the visually impaired. Text Mining of Web-Based Medical Content examines various approaches to deriving high quality information from online biomedical literature, electronic health records, query search terms, social media posts and tweets. Using some of the latest empirical methods of knowledge extraction, the authors show how online content, generated by both professionals and laypersons, can be mined for valuable information about disease processes, adverse drug reactions not captured during clinical trials, and tropical fever outbreaks. Additionally, the authors show how to perform information extraction on a hospital intranet, how to build a social media search engine to glean information about patients' own experiences interacting with healthcare professionals, and how to improve access to online health information. This volume provides a wealth of timely material for health informatic professionals and machine learning, data mining, and natural language researchers. Topics in this book include: •Mining Biomedical Literature and Clinical Narratives •Medication Information Extraction •Machine Learning Techniques for Mining Medical Search Queries •Detecting the Level of Personal Health Information Revealed in Social Media •Curating Layperson's Personal Experiences with Health Care from Social Media and Twitter •Health Dialogue Systems for Improving Access to Online Content •Crowd-based Audio Clips to Improve Online Video Access for the Visually Impaired •Semantic-based Visual Information Retrieval for Mining Radiographic Image Data •Evaluating the

**Mobile Messaging Technologies and Services** Gwenaél Le Bodic, 2003-01-10 Mobile messaging is practically the first data communication service in the wireless domain. It is a major advance on the conventional practice of providing only voice communication service over the wireless interface. Thus, mobile messaging is the initial step to bring the Internet to wireless terminals and has considerable importance both for mobile communication and the Internet. Mobile Messaging provides an in-depth description of messaging technologies supported by mobile networks. It covers the Short Message Service (SMS), Enhanced Messaging Service (EMS) through to the more complex and emerging Multimedia Messaging Service (MMS). The Short Message System (SMS) has proved to be incredibly popular and is supported by most GSM, TDMA and CDMA mobile networks. This volume focuses on the Short Message Service introduced by the European Telecommunications Standard Institute (ETSI) for GSM and GPRS networks. On the basis of ETSI standard, the 3rd Generation Partnership Project (3GPP) is currently the organisation responsible for maintaining the SMS technical specifications. In its most basic form, the Short Messaging Service allows users to exchange short messages composed of a limited amount of text and it is expected that up to 100 Billion short messages could be exchanged monthly by the end of 2002. The Enhanced Message Service (EMS), an application-level extension of SMS, supersedes basic SMS features by allowing elements such as images, animations, formatted text and monophonic melodies to be inserted in short or concatenated messages. Recently, the 3GPP has been focusing on the development of the Multimedia Message Service (MMS). MMS features include the exchange of messages containing polyphonic melodies, large images, video elements sometimes organised with a multimedia presentation language such as SMIL or XHTML. MMS will be supported by 2.5 G and 3G networks. MMS specifications have reached a fairly mature stage and MMS commercial solutions are appearing on the market. Unlike EMS, MMS has been specified by the 3GPP as a service independent from the underlying network technologies. In parallel to the 3GPP standardisation process, other organisations have specified network-specific implementations of MMS such as the WAP implementation defined by the WAP Forum. In order to develop applications using Short, Enhanced and Multimedia messaging technologies, engineers have to become familiar with the use of technical specifications produced by various standard development organisations such as the 3GPP, the WAP Forum and the IETF and this is the first book to pull this vast array of material together. \* Provides an in depth description of the different messaging services and messaging technologies \* Presents an introduction to mobile networks \* Features numerous practical implementation examples \* Provides a unique easy-to-follow presentation of messaging services and mobile networks within a single publication Essential reading for content providers, service providers, network operators and telecommunications manufacturers, researchers, postgraduate students, marketing and standardisation personnel.

*From Sacred Text to Internet* Gwilym Beckerlegge, 2017-10-05 This title was first published in 2001: *From Sacred Text to Internet* addresses two key issues affecting the global spread of religion: first, the impact of new media on the ways in which religious traditions present their messages, and second, the global relocation of religions in novel geographical and social settings. The book offers extended studies of Buddhism, Christianity, Hinduism and a wide-ranging survey chapter that refers to the presence on the Internet of many of the world's most influential religions. The

chapters explore the relationship between scholarly reconstructions of the life of Jesus and representations of Jesus in contemporary popular cultures; the production and use of sacred images for the Hindu mass market; how Buddhism is represented and spread in the West; the Islamization of Egypt, its causes and influences; and the uses to which the Internet is put by religions as well as how information technology has influenced the future shape of religion. The five textbooks and Reader that make up the Religion Today Open University/Ashgate series are: o From Sacred Text to Internet o Religion and Social Transformations o Perspectives on Civil Religion o Global Religious Movements in Regional Context o Belief Beyond Boundaries o Religion Today: A Reader

**Text linguistics for the contrastive study of online customer comments** Raul Sánchez Prieto, 2017-01-16 The goal of this corpus based research monograph is twofold. On the one hand, the volume delivers a practice relevant theoretical framework which will enable linguists and internationally operating businesses to evaluate product and service comments of foreign customers written in their mother tongue and intended for their fellow nationals. The theoretical framework should be applicable to any language combination. On the other hand, a large-scale empiric study has been carried out building on our theoretical premises with the aim of determining the text linguistic structure and language use in Spanish, Dutch, French and German customer comments on hotel accommodation in two relevant applications of the Social Web (social network services like Facebook and comments on the webs of hotel reservations agencies). Our findings will enable Spanish and German companies to interpret the linguistic behavior of their German/Spanish clients sharing their accommodation experiences on the Social Web.

**Implementing Mobile Messaging Service Systems** Kevin Curran, 2005-06 This book details the design and implementation of Short Messaging Service (SMS) and MMS applications. The main aim of this book is to provide SMS/MMS developers with the tools necessary to develop applications which can send SMS/MMS messages to groups of mobile devices. 1. The first section of this book presents a Java SMS application which allows the storage of contacts and groups of contacts. Thus the user of the application can customise his/her own list of contact 'Individuals' and 'Groups' of contacts (Such as: 'Family', 'Friends', 'Work Colleagues' etc). Upon selection of Individual(s) and/or Group(s) a single message such as how r u all can be sent to all their respective Mobile Stations (MS) by clicking on the 'Add' and then 'Send' button. The simplicity and ease of use of this application allows a diverse range of users from an individual home user to corporate wide user base. All code is presented and a working version is freely available for download. 2. The middle section of this book presents a similar group bulk SMS application which is web enabled. The application is written using Active Server Pages and is purely web based. Again, it allows the sending of messages to individuals and groups. For the purpose of sending SMS in each scenario, the Simplewire Active X Software Development Kit is used. All code is presented and a working version is freely available for download. 3. In order for rich media MMS messages to be sent and received, they must first be transcoded into the MMS format. Essentially what happens is that the content is tailored before it arrives at the mobile. This tailoring process is called transcoding. Transcoding

systems can adapt video, images, audio and text to the individual constraints of different devices. They summarise, translate and convert the content into the MMS format. This section of the book presents a transcoding framework, which enables various rich media files stored on PC to be sent to MMS capable handsets. Transcoding is the area that this project will focus on. A java application is developed that allows a user to select multimedia content stored on the computer and send it to a mobile. The application performs the transcoding of the message content into MMS format and deploys the message to the mobile.

**Building Multichannel Applications with WebSphere Commerce** Rufus Credle, Sribha Jain, Nicolai Nielsen, Leonardo Ramirez, Anand Tamariya, Fu Liang Wang, IBM Redbooks, 2010-02-24 This IBM® Redbooks® publication discusses the value proposition of cross-channel solutions and describes the IBM Retail Integration Framework Commerce Product Strategy solution and service-oriented architecture (SOA) as an enabler. In depth, this book describes cross-channel processes and cross-channel features and proposes scenarios and configurations to meet the challenges in a competitive environment. This book describes the latest features and techniques of IBM WebSphere® Commerce Version 7. In it, we present an overview of the WebSphere Commerce order and inventory management systems, the distributed order management (referred to as DOM throughout this book) integration framework, and a sample DOM integration scenario. We discuss the Madisons starter store (Web 2.0 storefront) and present a hands-on experience that integrates MapQuest with the WebSphere Commerce V7 Store Locator feature. We discuss how a merchant can use the mobile features that are included in WebSphere Commerce V7 to define e-Marketing Spots and promotion for mobile users. In addition, we demonstrate how to use Google Maps with the Store Locator feature on a mobile device. We include in this book an example about how to apply WebSphere Commerce features on a cross-channel solution as applied at the Easy Hogary Construcccion home improvement retail company in South America. The scenario explains how to scale from an SOA store to a cross-channel business model. This book is designed for use by WebSphere Commerce developers, practitioners, and solution architects in various industries.

**User Requirements for Wireless** Lene Sørensen, Knud Erik Skouby, 2015-04-22 In most IT system development processes, the identification or elicitation of user requirements is recognized as a key building block. In practice, the identification of user needs and wants is a challenge and inadequate or faulty identifications in this step of an IT system development can cause huge problems with the final product. The elicitation of user requirements as such changes according to age groups,; to gender,; to cultural settings,; and into time; and experience in the use of the system/software. User requirements, therefore, cannot be used between projects, IT systems, and different software. That makes the elicitation of user requirements an inherent part of any software development project and a resourceful activity as well. This book provides insights to the process of identifying user requirements and to different types by describing varying case studies in which technologies or software has been developed. A variety of user requirements are provided illustrating the effect of changing the targeted user group with respect to age,; to the context and the different technologies or software as well as to the difference in viewpoint on ways of involving users in the elicitation process. Cases and user requirement elements discussed in the book include: User requirements elicitation processes for children, construction workers, and farmers User requirements for personalized services of a broadcast company Variations in user involvement Practical elements of user involvement and requirements elicitation Usable security requirements for design of privacy
