Earth Observation Data Cubes Gregory Giuliani, Gilberto Camara, Brian Killough, Stuart Minchin, 2020-03-16 Satellite Earth observation (EO) data have already exceeded the petabyte scale and are increasingly freely and openly available from different data providers. This poses a number of issues in terms of volume (e.g., data volumes have increased 10x in the last 5 years); velocity (e.g., Sentinel-2 is capturing a new image of any given place every 5 days); and variety (e.g., different types of sensors, spatial/spectral resolutions). Traditional approaches to the acquisition, management, distribution, and analysis of EO data have limitations (e.g., data size, heterogeneity, and complexity) that impede their true information potential to be realized. Addressing these big data challenges requires a change of paradigm and a move away from local processing and data distribution methods to lower the barriers caused by data size and related complications in data management. To tackle these issues, EO data cubes (EODC) are a new paradigm revolutionizing the way users can store, organize, manage, and analyze EO data. This Special Issue is consequently aiming to cover the most recent advances in EODC developments and implementations to broaden the use of EO data to larger communities of users, support decision-makers with timely and actionable information converted into meaningful geophysical variables, and ultimately unlock the information power of EO data.

Building an Opportunity Society Lewis D. Solomon,2017-09-08 Twenty-first-century US policymakers face a great challenge: How can federal government help more people achieve the American dream? Specifically, how can we provide greater opportunities for less-prosperous individuals, enabling them to succeed through hard work, on their merits, and take increased responsibility for their lives? Lewis D. Solomon sees this as the challenge of our time. He seeks to thread the fine public policy needle between social democratic efforts to perfect the world and those who negatively view public sector programs. Based on the premise that capitalism is not inherently unjust and defective, and American capitalism's structural features do not inexorably thwart opportunity, Building an Opportunity Society offers the possibility of more limited, carefully structured, cost-effective, empirically verified federal policies and programs. Solomon first provides the background and context of many existing domestic challenges and problems that the current and proposed federal policies and programs seek to address. He then analyses the federal safety net that keeps Americans from poverty and helps reduce income inequality. Finally, he presents a lifecycle analysis of current federal policies and programs, preventive and remedial, designed as part of the Entitlement State, but if restructured could facilitate the building of an Opportunity Society. Solomon challenges policymakers to take a fresh look at how best to achieve society's goals for all citizens.
