The Age of Surveillance Capitalism Shoshana Zuboff,2019-01-15 The challenges to humanity posed by the digital future, the first detailed examination of the unprecedented form of power called surveillance capitalism, and the quest by powerful corporations to predict and control our behavior. In this masterwork of original thinking and research, Shoshana Zuboff provides startling insights into the phenomenon that she has named surveillance capitalism. The stakes could not be higher: a global architecture of behavior modification threatens human nature in the twenty-first century just as industrial capitalism disfigured the natural world in the twentieth. Zuboff vividly brings to life the consequences as surveillance capitalism advances from Silicon Valley into every economic sector. Vast wealth and power are accumulated in ominous new behavioral futures markets, where predictions about our behavior are bought and sold, and the production of goods and services is subordinated to a new means of behavioral modification. The threat has shifted from a totalitarian Big Brother state to a ubiquitous digital architecture: a Big Other operating in the interests of surveillance capital. Here is the crucible of an unprecedented form of power marked by extreme concentrations of knowledge and free from democratic oversight. Zuboff's comprehensive and moving analysis lays bare the threats to twenty-first century society: a controlled hive of total connection that seduces with promises of total certainty for maximum profit -- at the expense of democracy, freedom, and our human future. With little resistance from law or society, surveillance capitalism is on the verge of dominating the social order and shaping the digital future -- if we let it.

Swipe to Unlock Neel Mehta,Parth Detroja,Aditya Agashe,2017 WANT A NON-CODING JOB AT A TECH COMPANY? Interested in product management, marketing, strategy, or business development? The tech industry is the place to be: nontechnical employees at tech companies outnumber their engineering counterparts almost 3 to 1 (Forbes, 2017). You might be worried that your lack of coding skills or tech industry knowledge will hold you back. But here's the secret: you don't need to learn how to code to break into the tech industry. Written by three former Microsoft PMs, Swipe to Unlock gives you a breakdown of the concepts you need to know to crush your interviews, like software development, big data, and internet security. We'll explain how Google's ad targeting algorithm works, but Google probably won't ask you how to explain it in a non-technical interview. But they might ask you how you could increase ad revenue from a particular market segment. And if you know how Google's ad platform works, you'll be in a far stronger position to come up with good growth strategies. We'll show you how Robinhood, an app that lets you trade stocks without commission, makes money by earning interest on the unspent money that users keep in their accounts. No one will ask you to explain this. But if someone asks you to come up with a new monetization strategy for Venmo (which lets you send and receive money without fees), you could pull out the Robinhood anecdote to propose that Venmo earn interest off the money sitting in users' accounts. We'll talk about some business cases like why Microsoft acquired LinkedIn. Microsoft interviewers probably won't ask you about the motive of the purchase, but they might ask you for ideas to improve Microsoft Outlook. From our case study, you'll learn how the Microsoft and LinkedIn ecosystems could work together, which can help you craft creative, impactful answers. You could propose that Outlook use LinkedIn's social graph to give salespeople insights about clients before meeting them. Or you could suggest linking Outlook's organizational tree to LinkedIn to let HR managers analyze their company's hierarchy and figure out what kind of talent they need to add. (We'll further explore both ideas in the book.) Either way, you're sure to impress. Learn the must know concepts of tech from authors who have received job offers for Facebook's Rotational Product Manager, Google's Associate Product Marketing Manager, and Microsoft's Program Manager to get a competitive edge at your interviews!

Globalization, Deglobalization, and New Paradigms in Business Justin Paul,Sanjay Dhir,2021-10-18 This book analyzes the changing dynamics of competition and the emergence of deglobalization trends and processes. The authors begin by explaining the role of technology on globalization and its impact on competitive strategy. Then, they present a theoretical framework that outlines the connection between globalization and modern society. The book also delves into the shift toward deglobalization and addresses how the onset of the COVID-10 pandemic has accelerated the process. Concluding with a discussion of how the 4th Industrial Revolution has resulted in new paradigms for business, this book will fill a gap through its investigation of an emerging concept for scholars in international business.

Social Informatics Samin Aref,Kalina Bontcheva,Marco Braghieri,Frank Dignum,Fosca Giannotti,Francesco Grisolia,Dino Pedreschi,2020-10-08 This volume constitutes the proceedings of the 12th International Conference on Social Informatics, SocInfo 2020, held in Pisa, Italy, in October 2020. The 30 full and 3 short papers presented in these proceedings were carefully reviewed and selected from 99 submissions. The papers presented in this volume cover a broad range of

topics, ranging from works that ground information-system design on social concepts, to papers that analyze complex social systems using computational methods, or explore socio-technical systems using social sciences methods.

Social Media in the Arab World Barrie Gunter,Mokhtar Elareshi,Khalid Al-Jaber,2016-04-21 Following the Arab Spring, the use of social media has become instrumental in organising activist movements and spreading political dissent in the Middle East. New online behaviours have transformed traditional communication channels, enabling young people of all backgrounds to feel politically empowered. But now that spring has turned to winter, what are the long-term implications of internet activism in the region? Social Media in the Arab World provides a unique insight into the role of online communications as a force for change in the Gulf States. Featuring examples as diverse as neo-patrimonial politics in Saudi Arabia and the ways an online presence affects the status of women in Kuwait, the chapters examine shifts in the political, social and religious identities of citizens as a result of increased digital activism. With contributions from a variety of inter-disciplinary experts, this wide-ranging study examines the consequences of changing power dynamics brought about by popular social media. In doing so, this book offers an original perspective on the long-term implications of internet usage in the Arab world and is essential reading for students and researchers working across the region.

Practical Mobile Forensics Satish Bommisetty,Rohit Tamma,Heather Mahalik,2014-07-21 The book is an easy-to-follow guide with clear instructions on various mobile forensic techniques. The chapters and the topics within are structured for a smooth learning curve, which will swiftly empower you to master mobile forensics. If you are a budding forensic analyst, consultant, engineer, or a forensic professional wanting to expand your skillset, this is the book for you. The book will also be beneficial to those with an interest in mobile forensics or wanting to find data lost on mobile devices. It will be helpful to be familiar with forensics in general but no prior experience is required to follow this book.

Personal Data in Competition, Consumer Protection and Intellectual Property Law Mor Bakhoun,Beatriz Conde Gallego,Mark-Oliver Mackenrodt,Gintarė Surblytė-Namavičienė,2018-11-02 This book analyses the legal approach to personal data taken by different fields of law. An increasing number of business models in the digital economy rely on personal data as a key input. In exchange for sharing their data, online users benefit from personalized and innovative services. But companies' collection and use of personal data raise questions about privacy and fundamental rights. Moreover, given the substantial commercial and strategic value of personal data, their accumulation, control and use may raise competition concerns and negatively affect consumers. To establish a legal framework that ensures an adequate level of protection of personal data while at the same time providing an open and level playing field for businesses to develop innovative data-based services is a challenging task. With this objective in mind and against the background of the uniform rules set by the EU General Data Protection Regulation, the contributions to this book examine the significance and legal treatment of personal data in competition law, consumer protection law, general civil law and intellectual property law. Instead of providing an isolated analysis of the different areas of law, the book focuses on both synergies and tensions between the different legal fields, exploring potential ways to develop an integrated legal approach to personal data.

E-commerce Kenneth C. Laudon,Carol Guercio Traver,2016 For undergraduate and graduate courses in business. Understanding The Vast And Expanding Field of E-Commerce Laudon's E-Commerce 2016: Business, Technology, Society emphasizes three driving forces behind the expanding field of e-commerce: technology change, business development, and social issues. A conceptual framework uses the templates of many modern-day companies to further demonstrate the differences and complexities in e-commerce today. An in-depth investigation of companies such as Uber, Pinterest, and Apple kick-off the course while preparing students for real-life scenarios. In the Twelfth Edition, Laudon and Traver add new or update existing case studies to match developments in the e-commerce field as they exist in today's tech world. They built in additional video cases for each chapter, making the material even more accessible to students as they prepare for their future roles in business.

Digital Light Daniel Palmer,Sean Cubitt,Nathaniel Tkacz,2020-10-09 Light symbolises the highest good, it enables all visual art, and today it lies at the heart of billion-dollar industries. The control of light forms the foundation of contemporary vision. Digital Light brings together artists, curators, technologists and media archaeologists to study the historical evolution of digital light-based technologies. Digital Light provides a critical account of the capacities and limitations of contemporary digital light-based technologies and techniques by tracing their genealogies and comparing them with their predecessor media. As digital light remediates multiple historical forms (photography, print, film, video, projection, paint), the collection draws from all of these histories, connecting them to the digital present and placing them in dialogue with one another. Light is at once universal and deeply historical. The invention of mechanical media (including photography and cinematography) allied with changing print technologies (half-tone, lithography) helped structure the emerging electronic media of television and video, which in turn shaped the bitmap processing and raster display of digital visual media. Digital light is, as Stephen Jones points out in his contribution, an oxymoron: light is photons, particulate and discrete, and therefore always digital. But photons are also waveforms, subject to manipulation in myriad ways. From Fourier transforms to chip design, colour management to the translation of vector graphics into arithmetic displays, light is constantly disciplined to human purposes. In the form of fibre optics, light is now the infrastructure of all our media; in urban plazas and handheld devices, screens have become ubiquitous, and also standardised. This collection addresses how this occurred, what it means, and how artists, curators and engineers confront and challenge the constraints of increasingly normalised digital visual media. While various art pieces and other content are considered throughout the collection, the focus is specifically on what such pieces suggest about the intersection of technique and technology. Including accounts by prominent artists and professionals, the collection emphasises the centrality of use and experimentation in the shaping of technological platforms. Indeed, a recurring theme is how techniques of previous media become technologies, inscribed in both digital software and hardware. Contributions include considerations of image-oriented software and file formats; screen technologies; projection and urban screen surfaces; histories of computer graphics, 2D and 3D image editing software, photography and cinematic art; and transformations of light-based art resulting from the distributed architectures of the internet and the logic of the database. Digital Light brings together high profile figures in diverse but increasingly convergent fields, from academy award-winner and co-founder of Pixar, Alvy Ray Smith to feminist philosopher Cathryn Vasseleu. Big Data Executive Office of the President,2014-10-29 Since the first censuses were taken and crop yields recorded in ancient times, data collection and analysis have been essential to improving the functioning of society. Foundational work in calculus, probability theory, and statistics in the 17th and 18th centuries provided an array of new tools used by scientists to more precisely predict the movements of the sun and stars and determine population-wide rates of crime, marriage, and suicide. These tools often led to stunning advances. In the 1800s, Dr. John Snow used early modern data science to map cholera “clusters” in London. By tracing to a contaminated public well a disease that was widely thought to be caused by “miasmatic” air, Snow helped lay the foundation for the germ theory of disease. Gleaning insights from data to boost economic activity also took hold in American industry. Frederick Winslow Taylor's use of a stopwatch and a clipboard to analyze productivity at Midvale Steel Works in Pennsylvania increased output on the shop floor and fueled his belief that data science could revolutionize every aspect of life.² In 1911, Taylor wrote *The Principles of Scientific Management* to answer President Theodore

Roosevelt's call for increasing “national efficiency”: Today, data is more deeply woven into the fabric of our lives than ever before. We aspire to use data to solve problems, improve well-being, and generate economic prosperity. The collection, storage, and analysis of data is on an upward and seemingly unbounded trajectory, fueled by increases in processing power, the cratering costs of computation and storage, and the growing number of sensor technologies embedded in devices of all kinds. In 2011, some estimated the amount of information created and replicated would surpass 1.8 zettabytes. In 2013, estimates reached 4 zettabytes of data generated worldwide.

Tales From 2040 Christopher Cardinal,2013-07-04 Three short stories from a brighter future tell how the leaders of today could use capitalism to help solve some of the world's toughest problems... and make a fortune in the process.

Protecting the Privacy of Customers of Broadband and Other Telecommunications Services (Us Federal Communications Commission Regulation) (Fcc) (2018 Edition) The Law The Law Library,2018-10-14 Protecting the Privacy of Customers of Broadband and Other Telecommunications Services (US Federal Communications Commission Regulation) (FCC) (2018 Edition) The Law Library presents the complete text of the Protecting the Privacy of Customers of Broadband and Other Telecommunications Services (US Federal Communications Commission Regulation) (FCC) (2018 Edition). Updated as of May 29, 2018 In this document, the Federal Communications Commission (Commission) adopts final rules based on public comments applying the privacy requirements of the Communications Act of 1934, as amended, to broadband Internet access service (BIAS) and other telecommunications services. In adopting these rules the Commission implements the statutory requirement that telecommunications carriers protect the confidentiality of customer proprietary information. The privacy framework in these rules focuses on transparency, choice, and data security, and provides heightened protection for sensitive customer information, consistent with customer expectations. The rules require carriers to provide privacy notices that clearly and accurately inform customers; obtain opt-in or opt-out customer approval to use and share sensitive or non-sensitive customer proprietary information, respectively; take reasonable measures to secure customer proprietary information; provide notification to customers, the Commission, and law enforcement in the event of data breaches that could result in harm; not condition provision of service on the surrender of privacy rights; and provide heightened notice and obtain affirmative consent when offering financial incentives in exchange for the right to use a customer's confidential information. The Commission also revises its current telecommunications privacy rules to harmonize today's privacy rules for all telecommunications carriers, and provides a tailored exemption from these rules for enterprise customers of telecommunications services other than BIAS. This book contains: - The complete text of the Protecting the Privacy of Customers of Broadband and Other Telecommunications Services (US Federal Communications Commission Regulation) (FCC) (2018 Edition) - A table of contents with the page number of each section

Investigation Of Competition In Digital Markets United States Congress,UNITED STATES CONGRESS. HOUSE OF REPRESENTATIVES. COMMITTEE ON THE JUDICIARY.,House of Representatives,2020-10-06 In June 2019, the Committee on the Judiciary initiated a bipartisan investigation into the state of competition online, spearheaded by the Subcommittee on Antitrust, Commercial and Administrative Law. As part of a top-to-bottom review of the market, the Subcommittee examined the dominance of Amazon, Apple, Facebook, and Google, and their business practices to determine how their poweraffects our economy and our democracy. Additionally, the Subcommittee performed a review of existing antitrust laws, competition policies, and current enforcement levels to assess whether they areadequate to address market power and anticompetitive conduct in digital markets. Over the course of our investigation, we collected extensive evidence from these companies aswell as from third parties-totaling nearly 1.3 million documents. We held seven hearings to review the effects of market power online-including on the free and diverse press, innovation, and privacy-and a final hearing to examine potential solutions to concerns identified during the investigation and to inform this Report's recommendations. A year after initiating the investigation, we received testimony from the Chief ExecutiveOfficers of the investigated companies: Jeff Bezos, Tim Cook, Mark Zuckerberg, and Sundar Pichai. For nearly six hours, we pressed for answers about their business practices, including about evidence concerning the extent to which they have exploited, entrenched, and expanded their power over digitalmarkets in anticompetitive and abusive ways. Their answers were often evasive and non-responsive, raising fresh questions about whether they believe they are beyond the reach of democratic oversight. Although these four corporations differ in important ways, studying their business practices hasrevealed common problems
