Space Bound John Barrett,2016-03-10 Space Bound looks at today's biggest challenges-drugs, immigration, world politics-and puts the heroic Barrett family in charge of solving them. Book two of the Barrett Files, Space Bound continues to follow the industrious Barretts and their thriving technology company. Their cutting-edge solutions enable the United States to conquer problems across the country, the world, and even the universe. When a habitable world is discovered in a far-off nebula, it's up to the ingenious and patriotic family to create a way to reach the planet in a mere six weeks. The family accepts the challenge but soon learns that also means accepting the dangers that come with it. From the Oval Office to the boardroom, from the military complex to outer space, Space Bound explores the world's largest centers of power. Fast moving and suspenseful, it will take you across time and dimension to show that no challenge is too great-when you put the right people in command.

Modern Metaheuristics in Image Processing Diego Oliva,Noe Ortega-Sánchez,Salvador Hinojosa,Marco Pérez-Cisneros,2022-09-28 The use of metaheuristic algorithms (MA) has been increasing in recent years, and the image processing field is not the exempted of their application. In the last two years a big amount of MA has been introduced as alternatives for solving complex optimization problems. This book collects the most prominent MA of the 2019 and 2020 and verifies its use in image processing tasks. In addition, literature review of both MA and digital image processing is

presented as part of the introductory information. Each algorithm is detailed explained with special focus in the tuning parameters and the proper implementation for the image processing tasks. Besides several examples permits to the reader explore and confirm the use of this kind of intelligent methods. Since image processing is widely used in different domains, this book considers different kinds of datasets that includes, magnetic resonance images, thermal images, agriculture images, among others. The reader then can have some ideas of implementation that complement the theory exposed of each optimization mechanism. Regarding the image processing problems this book consider the segmentation by using different metrics based on entropies or variances. In the same way, the identification of different shapes and the detection of objects are also covered in the corresponding chapters. Each chapter is complemented with a wide range of experiments and statistical analysis that permits the reader to judge about the performance of the MA. Finally, there is included a section that includes some discussion and conclusions. This section also provides some open questions and research opportunities for the audience.

Defence and Discovery Andrew B. Godefroy,2011-04-01 The Cold War space race between the United States and the Soviet Union is well documented, but few are aware of Canada's early activities in this important arena of global power. Defence and Discovery represents the first comprehensive investigation into the origins, development, and impact of Canada's space program from 1945 to 1974. Meticulously researched, it demonstrates the central role of the military in Canada's early space research, illuminating a significant yet understudied period in Canada's growth as a nation.

A Primer on Pseudorandom Generators Oded Goldreich,2010 A fresh look at the question of randomness was taken in the theory of computing: A distribution is pseudorandom if it cannot be distinguished from the uniform distribution by any efficient procedure. This paradigm, originally associating efficient procedures with polynomial-time algorithms, has been applied with respect to a variety of natural classes of distinguishing procedures. The resulting theory of pseudorandomness is relevant to science at large and is closely related to central areas of computer science, such as algorithmic design, complexity theory, and cryptography. This primer surveys the theory of pseudorandomness, starting with the general paradigm, and discussing various incarnations while emphasizing the case of general-purpose pseudorandom generators (withstanding any polynomial-time distinguisher). Additional topics include the derandomization of arbitrary probabilistic polynomial-time algorithms, pseudorandom generators withstanding space-bounded distinguishers, and serveral natural notions of special-purpose pseudorandom generators. The primer assumes basic familiarity with the notion of efficient algorithms and with elementary probability theory, but provides a basic introduction to all notions that are actually used. as a result, the primer is essentially self-contained, although the interested reader is at times referred to other sources for more detail.

Verification, Model Checking, and Abstract Interpretation Lenore D. Zuck,Paul D. Attie,Agostino Cortesi,Supratik Mukhopadhyay,2003-07-01 This volume contains the proceedings of the 4th International Conference on Veri?cation, Model Checking, and Abstract Interpretation (VMCAI 2003), held in New York city, January 9–11, 2003. The purpose of VMCAI was to provide a forum for researchers from three communities—Veri?cation, Model Checking, and Abstract Interpretation—that will facilitate interaction, cross-fertilization, and the advance of hybrid methods that combine the three areas. With the g- wingneedforformaltoolstoreasonaboutcomplex,in?nite-state,andembedded systems, such hybrid methods are bound to be of great importance. Topics covered by VMCAI include program veri?cation, static analysis te- niques, model checking, program certi?cation, type systems, abstract domains, debugging techniques, compiler optimization, embedded systems, and formal analysis of security protocols. VMCAI 2003 was the fourth VMCAI meeting. The previous three were held as workshops (Port Je?erson 1997, Pisa 1998, and Venice 2002). It is the success of the last meeting, and the wide response it generated, that made it clear the time had come to make it an annual conference.
