Spying Software Development in Google Android Fissha SeyoumTeshome,2017-06-28 Bachelor Thesis from the year 2011 in the subject Computer Science - IT-Security, Helsinki Metropolia University of Applied Sciences , language: English, abstract: The main purpose was to study the concept behind developing spying software. The goal of this project was to develop a mobile phone tracking application for Google Android phones. The application was expected to include the use of GPS and Cell-ID to track the location of a mobile phone. The Google Android SDK was used to develop the tracking software application. The application was tested on a Google Android mobile phone. The result showed that the development process of location and maps-based applications was fast while using Google Android. This was because of two main reasons. First, Google Android Provided APIs for location-based services such as GPS and Cell-ID. Second, having Eclipse with ADT plug-in as the choice to develop the application led to an easy means of debugging and testing. The tracking application was found important to use since it will allow users to trace lost phones or to locate lost people. The application can be developed further by adding a number of features to it such as running in the background, SMS copying and making a spy call.

**Hacker, Influencer, Faker, Spy** Robert Dover,2022-10-31 Intelligence agencies are reflections of the societies they serve. No surprise, then, that modern spies and the agencies they work for are fixated on the internet and electronic communications. These same officials also struggle with notions of privacy, appropriateness, national boundaries and the problem of disinformation. They are citizens of both somewhere and nowhere, serving a national public yet confronting spies who operate across borders. These adversaries are utilising new technologies that offer a transnational anonymity. Meanwhile, ordinary people are keen to be protected from threats, but equally keen – basing their understanding of

intelligence on news and popular culture – to avoid over-reach by authorities believed to have near-God-like powers. This is the new operating environment for spies: a heady mix of rapid technological development, identity politics, plausible deniability, uncertainty and distrust of authority. Hacker, Influencer, Faker, Spy explores both the challenges spies face from these digital horizons, and the challenges citizens face in understanding what spies do and how it impacts on them. Robert Dover makes a radical case for overhauling intelligence to capitalise on open-source information: shrinking the secret state, whilst still supporting the functioning of modern governments in the post-COVID age.
