Technology and Domestic and Family Violence Bridget

Harris, Delanie Woodlock, 2023-01-30 This book brings together academics and advocates to explore an emerging issue: the use of technology by perpetrators of domestic and family violence. Of interest too is critique of government and non-government activities in this arena and how technology can be harnessed to respond to harm. Domestic and family violence (DFV) is widely recognised as an important social issue, impacting the safety and wellbeing of victim/survivors and their children, and on a broader scale, threatening risk and security on global levels. This book provides insights drawn from research and practice in the Global South and Global North to provide an evidence base and real-world solutions and initiatives to understand, address and ultimately prevent technology-facilitated domestic and family violence and how technology can be used to effect positive change and empower victim/survivors and communities. Technology and Domestic and Family Violence will be of great interest to students and scholars on victimology, criminology, social work, law, women's studies, sociology and media studies. It will also be a valuable reference for practitioners, government and non-government advocates working on issues around domestic violence.

Spying Software Development in Google Android Fissha

SeyoumTeshome, 2017-06-28 Bachelor Thesis from the year 2011 in the subject Computer Science - IT-Security, Helsinki Metropolia University of Applied Sciences, language: English, abstract: The main purpose was to study the concept behind developing spying software. The goal of this project was to develop a mobile phone tracking application for Google Android phones. The application was expected to include the use of GPS and Cell-ID to track the location of a mobile phone. The Google Android SDK was used to develop the tracking software application. The application was tested on a Google Android

mobile phone. The result showed that the development process of location and maps-based applications was fast while using Google Android. This was because of two main reasons. First, Google Android Provided APIs for location-based services such as GPS and Cell-ID. Second, having Eclipse with ADT plug-in as the choice to develop the application led to an easy means of debugging and testing. The tracking application was found important to use since it will allow users to trace lost phones or to locate lost people. The application can be developed further by adding a number of features to it such as running in the background, SMS copying and making a spy call.

Spy Toys Mark Powers, 2018-01-16 The world's leading toy manufacturer gives each toy it creates a tiny, computerized brain and a unique personality making for some seriously awesome toys. But sometimes there's a faulty toy . . . Dan is a Snuggly Cuddlestear bear--he should be perfect for hugging. But because of a malfunctioning chip, Dan is so strong he could crush a car. Thrown into the rejects pile, he meets Arabella, a Loadsasmiles Sunshine doll, who has a very short temper. Soon Dan, Arabella, and Flax (a custom-made police robot rabbit) are recruited by the head of the toy world exactly for what makes them unfit. And their first mission is a doozy: to protect a senator's eight-year-old son from being kidnapped. With black-and-white illustrations throughout, this hilarious book has reluctant reader appeal written all over it.

Counter-Terrorism Technologies Peter Lehr,2018-07-10 This book critically discusses the role of technology for counter-terrorism in general, and for securing our vulnerable open societies in particular. It is set against the backdrop of the terrorist threat posed by the combined forces of Al Qaeda and ISIS/Daesh in the foreseeable future. The book commences by illuminating current and foreseeable tactics and weapons used by these implacable enemies - weapons that may well include chemical, biological, radiological and potentially even nuclear (CBRN) devices. In a second part, it introduces technologies already available or in development that promise an increase in safety and security when it comes to the dangers posed by these terrorists. This part also includes a critical discussion of advantages and disadvantages of such technologies that are, quite often, sold as a 'silver bullet' approach in the fight against terrorism. Controversies such as those triggered by the abuse of millimeter wave scanners deployed at several Western European airports will demonstrate that there are costs involved with regard to human rights. The third, analytical part takes the critical discussion further by arguing that the uncritical fielding of new surveillance and control technologies in parallel with the on-going outsourcing and privatization of key services of the state could well lead to dystopias as envisaged in a rather prescient

way by the so-called cyperpunk novels of the 1980s. The book concludes with the question that any liberal democracy should ask itself: how far can we go with regard to hardening our societies against terrorist threats?

Secure IT Systems Lothar Fritsch, Ismail Hassan, Ebenezer Paintsil, 2023-11-08 This book constitutes the proceedings of the 28th Nordic Conference, NordSec 2023, held in Oslo, Norway, during November 16-17, 2023. The 18 full papers included in this volume were carefully reviewed and selected from 55 submissions. This volume focuses on a broad range of topics within IT security and privacy.

Identity Technologies Anna Poletti, Julie Rak, 2014-01-31 Identity Technologies is a substantial contribution to the fields of autobiography studies, digital studies, and new media studies, exploring the many new modes of self-expression and self-fashioning that have arisen in conjunction with Web 2.0, social networking, and the increasing saturation of wireless communication devices in everyday life. This volume explores the various ways that individuals construct their identities on the Internet and offers historical perspectives on ways that technologies intersect with identity creation. Bringing together scholarship about the construction of the self by new and established authors from the fields of digital media and auto/biography studies, Identity Technologies presents new case studies and fresh theoretical questions emphasizing the methodological challenges inherent in scholarly attempts to account for and analyze the rise of identity technologies. The collection also includes an interview with Lauren Berlant on her use of blogs as research and writing tools.

Social Informatics Luca Maria Aiello, Daniel McFarland, 2014-11-06 This book constitutes the proceedings of the 6th International Conference on Social Informatics, SocInfo 2014, held in Barcelona, Spain, in November 2014. The 28 full papers and 14 short papers presented in this volume were

carefully reviewed and selected from 147 submissions. The papers are organized in topical sections such as network, communities, and crowds; interpersonal links and gender biases; news, credibility, and opinion formation; science and technologies; organizations, society and social good.

Apps, Technology and Younger Learners Natalia Kucirkova, Garry Falloon, 2016-11-10 This book provides an in-depth analysis of the challenges, potential and theoretical possibilities of apps and considers the processes of change for education and home learning environments. Drawing together a diverse team of international contributors, it addresses the specific features, context of use and content of apps to uncover the importance of these tools for young children's learning. *Apps, Technology and Younger Learners* focuses on ways that apps support early years and primary school learning, connect various learning spaces and engage children in a range of edutainment and knowledge-building activities. In each chapter, the current state of knowledge and key research questions in the field for future study are identified, with clear messages provided at the end of each chapter. Focusing on empirical studies and strong theoretical frameworks, this book covers four key parts: Understanding the learning potential of children's apps; Key app challenges; Empirical evidence; Future avenues. This book is an essential guide for educators, post-graduate students, researchers and all those interested in the advantages or challenges that may result from integrating apps into early education.

The MENA Region and COVID-19 Zeina Hobaika, Lena-Maria Möller, Jan Claudius Völkel, 2022-05-30 Focusing on the Middle East and North Africa (MENA) region, which comprises some of the world's richest countries next to some of the poorest, this book offers excellent insights into the discriminatory consequences of the COVID-19 pandemic. With a geographic focus on the MENA region, the multidisciplinary case studies

collected in this edited volume reveal that the coronavirus's impact patterns are a question of two variables: governance performance and socioeconomic potency. Given the global, unprecedented, complex, and systemic nature of COVID-19 - and its long-term implications for societies, governments, international organisations, citizens and corporations - this volume entails a relevance to regions undergoing similar dynamics. Analyses in the book, therefore, have implications for the comparative study of the pandemic and its impact on societies around the globe. Understanding related dynamics and implications, and making use of lessons learned, are a pathway to deal with future similar crises. Questions covered in the volume are relevant to geopolitics, social implications and the relations between political leaders and citizens as beings embedded in various strategies of communication. The volume will appeal to scholars of international politics, political science, risk or crisis governance, economics and sociology, human rights and security, political communication and public health. The Open Access version of this book, available at <http://www.taylorfrancis.com>, has been made available under a Creative Commons Attribution-Non Commercial- No Derivatives 4.0 licence.

Wearable Devices, Surveillance Systems, and AI for Women's Wellbeing Ponnusamy, Sivaram,Bora, Vibha,Daigavane, Prema M.,Wazalwar, Sampada S.,2024-03-25 In a world where the safety of women remains a pressing issue, the intersection of artificial intelligence (AI) and emerging technologies is a motivating force. Despite strides toward gender equality, women continue to face threats, harassment, and violence, necessitating innovative solutions. Traditional approaches fall short of providing comprehensive protection, prompting the exploration of innovative technologies to address these challenges effectively. *Wearable Devices, Surveillance Systems, and AI for Women's Wellbeing* emerges as a timely and indispensable solution to the persistent safety issues faced by women globally. This persuasive book not only articulates the problems women encounter but also presents groundbreaking solutions that harness the transformative potential of AI. It delves into the intricate ways AI applications, from mobile safety apps to predictive analytics, can be strategically employed to create a safer and more inclusive society for women.

Click Here to Kill Everybody: Security and Survival in a Hyper-connected World Bruce Schneier,2018-09-04 A world of smart devices means the Internet can kill people. We need to act. Now. Everything is a computer. Ovens are computers that make things hot; refrigerators are computers that keep things cold. These computers—from home thermostats to chemical plants—are all online. The Internet, once a virtual abstraction,

can now sense and touch the physical world. As we open our lives to this future, often called the Internet of Things, we are beginning to see its enormous potential in ideas like driverless cars, smart cities, and personal agents equipped with their own behavioral algorithms. But every knife cuts two ways. All computers can be hacked. And Internet-connected computers are the most vulnerable. Forget data theft: cutting-edge digital attackers can now crash your car, your pacemaker, and the nation's power grid. In *Click Here to Kill Everybody*, renowned expert and best-selling author Bruce Schneier examines the hidden risks of this new reality. After exploring the full implications of a world populated by hyperconnected devices, Schneier reveals the hidden web of technical, political, and market forces that underpin the pervasive insecurities of today. He then offers common-sense choices for companies, governments, and individuals that can allow us to enjoy the benefits of this omnipotent age without falling prey to its vulnerabilities. From principles for a more resilient Internet of Things, to a recipe for sane government regulation and oversight, to a better way to understand a truly new environment, Schneier's vision is required reading for anyone invested in human flourishing.

The 68 revised full papers and 6 revised short papers presented were carefully reviewed and selected from 251 submissions. The papers of this volume are organized in topical sections on AI and health; sentiment analysis; intelligent applications; social media analytics; business intelligence; Natural Language Processing; information extraction; machine learning; smart systems; semantic web; decision support systems; image analysis;

automated software engineering.

Introduction To Cyber Forensic Psychology: Understanding The Mind Of The Cyber Deviant Perpetrators Majeed Khader, Loo Seng Neo, Whistine Xiau Ting Chai, 2021-02-04 This edited book, *Introduction to Cyber Forensic Psychology: Understanding the Mind of the Cyber Deviant Perpetrators*, is the first of its kind in Singapore, which explores emerging cybercrimes and cyber enabled crimes. Utilising a forensic psychology perspective to examine the mind of the cyber deviant perpetrators as well as strategies for assessment, prevention, and interventions, this book seeks to tap on the valuable experiences and knowledge of leading forensic psychologists and behavioural scientists in Singapore. Some of the interesting trends discussed in this book include digital self-harm, stalkerware usage, livestreaming of crimes, online expression of hate and rebellion, attacks via smart devices, COVID-19 related scams and cyber vigilantism. Such insights would enhance our awareness about growing pervasiveness of cyber threats and showcase how behavioural sciences is a force-multiplier in complementing the existing technological solutions.

Dust Net David Dvorkin, 2013-07-05 This is a work of nonfiction plus some speculation. It's largely about drones and their very rapid miniaturization, their present and coming use in law enforcement and war, and a potential future in which spy and communication equipment will literally be the size of dust motes, almost impossible to see and impossible to escape. It's also about the complete lack of privacy that is coming in the future. Parts of the book are encouraging, detailing how such devices will help rescue people after disasters, help people escape the control of repressive governments, and simply communicate more easily with one another. But most of the book is chilling indeed, portraying a future that will be very, very different from our past. What's really important is that this is NOT a work of science fiction. Many of the devices described here either exist already or

are in the development stage. No matter where you fall on the political spectrum, you need to read this book, because to know the future is to help yourself prepare for it.

Privacy in the Age of Big Data Theresa Payton, Ted Claypoole, 2023-03-15 Thoroughly updates the first edition by addressing the significant advances in data-driven technologies, their intrusion deeper in our lives, the limits on data collection newly required by governments in North America and Europe, and the new security challenges of a world rife with ransomware and hacking.
