Spying Software Development in Google Android
Fissha SeyoumTeshome, 2017-06-28 Bachelor Thesis from the year 2011 in the subject Computer Science - IT-Security, Helsinki Metropolia University of Applied Sciences , language: English, abstract: The main purpose was to study the concept behind developing spying software. The goal of this

project was to develop a mobile phone tracking application for Google Android phones. The application was expected to include the use of GPS and Cell-ID to track the location of a mobile phone. The Google Android SDK was used to develop the tracking software application. The application was tested on a Google Android mobile phone. The result showed that the development process of location and maps-based applications was fast while using Google Android. This was because of two main reasons. First, Google Android Provided APIs for location-based services such as GPS and Cell-ID. Second, having Eclipse with ADT plug-in as the choice to develop the application led to an easy means of debugging and testing. The tracking application was found important to use since it will allow users to trace lost phones or to locate lost people. The application can be developed further by adding a number of features to it such as running in the background, SMS copying and making a spy call.

Technology Security and National Power Stephen D. Bryen, 2017-07-05 In *Technology Security and National Power*, Stephen D. Bryen shows how the United States has squandered its technological leadership through unwise policies. Starting from biblical times, he shows how technology has either increased national power or led to military and

political catastrophe. He goes on to show how the US has eroded its technological advantages, endangering its own security. The scope of Technology Security and National Power extends across 3,000 years of history, from an induced plague in Athens to chemical weapons at Ypres to an atomic bomb on Hiroshima to the nuclear balance of terror. It describes new weapons systems and stealth jets, cyber attacks on national infrastructure, the looting of America's Defense secrets, and much more. The core thesis is supported by unique insight and new documentation that reaches into today's conflicted world. More than a litany of recent failures and historical errors, this book is a wake-up call for political actors and government officials who seem unable to understand the threat. Technology Security and National Power proposes that the United States can again become a winner in today's globalized environment.
