**Cinéma&Cie 29** Stefano Baschiera, Francesco Di Chiara, Valentina Re, 2018-12-14 T00:00:00+01:00 This special issue of Cinéma & Cie analyses the logic and processes of re-intermediation emerging in the contemporary European media industry landscape, providing an opportunity to bring questions of availability, text circulation and gatekeeping to the centre of scholarly debates and investigations. Through contributions showcasing a wide array of methodological and theoretical approaches, the volume illustrates and analyses the presence of new gatekeepers, their impact in shaping texts and their consumption in different European contexts. Its case studies include file sharing, Curzon Home Cinema, VOD services and the problematic implementation of the Digital Single Market policy.

**Market-Consistent Prices** Pablo Koch-Medina, Cosimo Munari, 2020-07-16 Arbitrage Theory provides the foundation for the pricing of financial derivatives and has become indispensable in both financial theory and financial practice. This textbook offers a rigorous and comprehensive introduction to the mathematics of arbitrage pricing in a discrete-time, finite-state economy in which a finite number of securities are traded. In a first step, various versions of the Fundamental Theorem of Asset Pricing, i.e., characterizations of when a market does not admit arbitrage opportunities, are proved. The book then focuses on incomplete markets where the main concern is to obtain a precise description of the set of “market-consistent” prices for nontraded financial contracts, i.e. the set of prices at which such contracts could be transacted between rational agents. Both European-type and American-type contracts are considered. A distinguishing feature of this book is its emphasis on market-consistent prices and a systematic description of pricing rules, also at intermediate dates. The

benefits of this approach are most evident in the treatment of American options, which is novel in terms of both the presentation and the scope, while also presenting new results. The focus on discrete-time, finite-state models makes it possible to cover all relevant topics while requiring only a moderate mathematical background on the part of the reader. The book will appeal to mathematical finance and financial economics students seeking an elementary but rigorous introduction to the subject; mathematics and physics students looking for an opportunity to get acquainted with a modern applied topic; and mathematicians, physicists and quantitatively inclined economists working or planning to work in the financial industry.

The SAGE International Encyclopedia of Mass Media and Society  
Debra L. Merskin, 2019-11-12 The SAGE International Encyclopedia of Mass Media and Society discusses media around the world in their varied forms—newspapers, magazines, radio, television, film, books, music, websites, social media, mobile media—and describes the role of each in both mirroring and shaping society. This encyclopedia provides a thorough overview of media within social and cultural contexts, exploring the development of the mediated communication industry, mediated communication regulations, and societal interactions and effects. This reference work will look at issues such as free expression and government regulation of media; how people choose what media to watch, listen to, and read; and how the influence of those who control media organizations may be changing as new media empower previously unheard voices. The role of media in society will be explored from international, multidisciplinary perspectives via approximately 700 articles drawing on research from communication and media studies, sociology, anthropology, social psychology, politics, and business.

**Probing auditory scene analysis** Elyse S Sussman,Susan Denham,Susann Deike,2015-02-11 In natural environments, the auditory system is typically confronted with a mixture of sounds originating from different sound sources. As sounds spread over time, the auditory system has to continuously decompose competing sounds into distinct meaningful auditory objects or “auditory streams” referring to certain sound sources. This decomposition work, which was termed by Albert Bregman as “Auditory scene analysis” (ASA), involves two kinds of grouping to be done. Grouping based on simultaneous cues, such as harmonicity and on sequential cues, such as similarity in acoustic features over time. Understanding how the brain solves these tasks is a fundamental challenge facing auditory scientist. In recent years, the topic of ASA was broadly investigated in different fields of auditory research, including a wide range of methods, studies

in different species, and modeling. Despite the advance in understanding ASA, it still proves to be a major challenge for auditory research. This includes verifying whether experimental findings are transferable to more realistic auditory scenes. A central approach in understanding ASA is the use of certain stimulus parameters that produce an ambiguous percept. The advantage of such an approach is that different perceptual organizations can be studied without varying physical stimulus parameters. Additionally, the perception of ambiguous stimuli can be volitionally controlled by intention or task. By using this one can mirror real hearing situations where listeners intent to identify and to localize auditory sources. Recently it was also found that in classical auditory streaming sequences perceptual ambiguity was not restricted to but was observed over a broad range of stimulus parameters. The proposed Research Topic pursues to bring together scientist in the different fields of auditory research whose work addresses the issue of perceptual ambiguity. Researchers were welcome to contribute experimental reports, computational modeling, and reviews that consider auditory ambiguity in its modality specific characteristics as well as in comparison to visual ambiguous figures. The overall goal of contributions was to consider the experimental findings from the perspective of real auditory scenes. In a broader sense, the Research Topic was open for contributions which are related to the issue of active listening in complex scenes.

### **Sociální marketingové kampaně v Česku III. Radim**

Bačuvčík, Lenka Harantová, 2017-01-01 Monografie mapuje kampaně, které byly na toto téma vytvořeny a realizovány na území České republiky od roku 1990 až do současnosti. Na základě analýzy kampaní ukazuje různorodost komunikace souvisejících témat pomocí mediálních kampaní, eventů ve veřejném prostoru, aktivit v online prostředí, vzdělávacích aktivit ve školách nebo jiných prostorech. Závěry analýzy naznačují, že existují témata, jimž je věnována větší pozornost, stejně jako témata spíše opomíjená. Až na výjimky lze tvrdit, že u většiny témat neexistuje dlouhodobá, kontinuální komunikace, která by vytvářela předpoklad k tomu, aby se společenské smýšlení a chování skutečně změnilo požadovaným směrem. K dalším problémům může patřit to, že jistá část kampaní nemá detailně definovanou cílovou skupinu a obrací se tedy na obecnou veřejnost, nebo že u velké části kampaní není sledována a vyhodnocována jejich efektivita. K pozitivním zjištěním patří, že podstatná část kampaní se obrací na mladé lidi, od žáků základních škol až po mladé dospělé. Většina kampaní z této oblasti pochází od neziskových organizací, ale i institucí veřejné správy, které tak mají možnost veřejné smýšlení o daných otázkách významně ovlivňovat. Tato monografie je třetím dílem monografické řady, jejímž cílem je postupně zmapovat všechny tematické oblasti, jimž se sociální marketing a sociální marketingová komunikace v České republice věnuje. První díl nesl podtitul „Ochrana zdraví“, druhý „Bezpečnost a prevence zranění“, další díly budou věnovány problematice ochrany životního prostředí, společenské angažovanosti a prosazování zájmů ve společenské oblasti.

This exciting addition to the food studies literature will appeal in particular to students and scholars of sociology, anthropology, media and cultural studies.
