State of the Art in Computer Graphics David F. Rogers, Rae Earnshaw, 2012-12-06 State of the Art in Computer Graphics Aspects of Visualization This is the fourth volume derived from a State of . . . the Art in Computer Graphics Summer Institute. It represents a snapshot of a number of topics in computer graphics, topics which include visualization of scientific data; modeling; some aspects of visualization in virtual reality; and hardware architectures for visualization. Many papers first present a background introduction to the topic, followed by discussion of current work in the topic. The volume is thus equally suitable for nonspecialists in a particular area, and for the more experienced researcher in the field. It also enables general readers to obtain an acquaintance with a particular topic area sufficient to apply that knowledge in the context of solving current problems. The volume is organized into four chapters - Visualization of Data, Modeling, Virtual Reality Techniques, and Hardware Architectures for Visualization. In the first chapter, Val Watson and Pamela Walatka address the visual aspects of fluid dynamic computations. They discuss algorithms for function-mapped surfaces and cutting planes, isosurfaces, particle traces, and topology extractions. They point out that

current visualization systems are limited by low information transfer bandwidth, poor response to viewing and model accuracy modification requests, mismatches between model rendering and human cognitive capabilities, and ineffective interactive tools. However, Watson and Walatka indicate that proposed systems will correct most of these problems.

Silver Screen to Digital Carlo Montanaro, 2019-12-03 An era has ended. After one hundred and twenty-five years, a change has taken place in cinemas. The thousands of figures formed by silver and coloured pigments can no longer be viewed through transparent film, instead, everything has become digital, compressed, virtual and built into the rapid alternation of millions (hopefully, for quality's sake) of dots, or pixels within a very neat and minuscule grid. But projection is just the last link in a chain that is transforming the most direct language invented by humanity over the centuries. The other links – shooting, editing, special effects, re-elaboration and sound reproduction – have by now undergone radical transformations that have often signified progress. Perhaps, it is worth the trouble, then, having accepted this transformation-revolution once and for all, to understand where we started out from, how cinematographic language was born and how its grammar first and later its syntax evolved thanks to technological development. Without lightweight equipment for sound recording, sensitive emulsions, portable and compact lighting, it would not have been possible, at the end of the 50s, for example, to create identifiable currents of experimentation and concept under such titles as free cinema or nouvelle vague, which were largely based on footage from life and no longer reconstructed in the studio. That which filmmakers today can achieve even more effectively thanks to a range of digital technologies, paradoxically, involves working with even more-minimal equipment such as a smartphone in front of green or blue screens, against absolutely virtual backgrounds. In short: no more silver and more and more pixels.

Don de error. Tras los pasos del traductor errante Tolosa Igualada, Miguel, 2013-10-21 El error brinda una importante información. Dejar de estigmatizarlo para analizarlo no solo como un producto,

como el resultado de una acción acabada, sino también como la manifestación de una acción en proceso ofrece diversas posibilidades de análisis y arroja nueva luz sobre un fenómeno poliédrico como es el del error con vistas a aprovechar todo su potencial pedagógico en la formación de los futuros profesionales de la traducción.
