Hence, various communities and cities offer 3D landscape and 3D city models as valuable source and instrument for sustainable management of rural and urban resources. Also municipal utilities, real estate companies benefit from recent developments related to 3D applications. In order to present recent developments and to discuss future trends, academics and practitioners met at the 7th International Workshop on 3D Geoinformation. This book comprises a selection of evaluated, high quality papers that were presented at this workshop in May 2012. The topics focus explicitly on the last achievements (methods, algorithms, models, systems) with respect to 3D GeoInformation requirements. The book is aimed at decision makers and experts as well at students interested in the 3D component of geographical information science including GI engineers, computer scientists, photogrammetrists, land surveyors, urban planners, and mapping specialists.

What is Branding? Matthew Healey, 2010-10-01 It is an exciting time for branding. As everything becomes global, good branding becomes more crucial. What is Branding? is an accessible guide that makes sense of this complex subject. It explores the process of branding, and shares insights that can be applied to practical challenges. Outlining the components of branding (positioning, storytelling, design, price, and relationships), what it can be applied to, and what it can achieve, What is Branding? will help ensure the success of branding for any product, service, person, or place. Case studies included in the international portfolio of campaigns explain what makes them work, why they matter, and what can be learnt from them. Analysis focuses both on design know-how and on theory, looking at how professionals wrestle with abstract notions of perception, culture, and love while at the same time solving the nuts-and-bolts problems of package design, sign making, and web technology.

Electronics for Vinyl Douglas Self,2017-08-15 Electronics for Vinyl is the most comprehensive book ever produced on the electronic circuitry needed to extract the best possible signal from grooves in vinyl. What is called the vinyl revival is in full swing, and a clear and comprehensive account of the electronics you need is very timely. Vinyl reproduction presents some unique technical challenges; the signal levels from moving-magnet cartridges are low, and those from moving-coil cartridges lower still, so a good deal of high-quality low-noise amplification is required. Some of the features of Electronics for Vinyl include: ● integrating phono amplifiers into a complete preamplifier; ● differing phono amplifier technologies; covering active, passive, and semi-passive RIAA equalisation and transconductance RIAA stages; ● the tricky business of getting really accurate RIAA equalisation without spending a fortune on expensive components, such as switched-gain MM/MC RIAA amplifiers that retain great accuracy at all gains, the effects of finite open-loop gain, cartridge-preamplifier interaction, and so on; ● noise and distortion in phono amplifiers, covering BJTs, FETs, and opamps as input devices, hybrid phono amplifiers, noise in balanced MM inputs, noise weighting, and cartridge load synthesis for ultimately low noise; ● archival and non-standard equalisation for 78s etc.; ● building phono amplifiers with discrete transistors; ● subsonic filtering, covering all-pole filters, elliptical filters, and suppression of subsonics by low-frequency crossfeed, including the unique Devinyliser concept; ● ultrasonic and scratch filtering, including a variety of variable-slope scratch filters; ● line output technology, including zero-impedance outputs, on level indication for optimal setup, and on specialised power supplies; and ● description of six practical projects which range from the simple to the highly sophisticated, but all give exceptional performance. Electronics for Vinyl brings the welcome news that there is simply no need to spend huge sums of money to get performance that is within a hair's breadth of the best theoretically obtainable. But you do need some specialised knowledge, and here it is.

The Cities Book Lonely Planet Publications (Firm),2009 Cities represent civilisation and human achievement: they are bubbling microcosms of virtues and vices, vanguards of technology and creative pursuits, incubators of traditions and melting-pots of diversity. More than half the world's population now lives in cities, and for travellers they hold an-endless fascination. Here we present the 200 most vibrant, diverse, hypnotic and chaotic cities in the world, ranked in order as voted for by people who know - Lonely Planet's staff, authors, and readers. The list is as diverse as the people that created it. Of course, there are the usual suspects: Paris, London, New York - but also the unfamiliar, the exotic, and the tiny: Abuja (Nigeria), Nuuk (Greenland), Saint-Denis (Réunion) and Ulaanbataar (Mongolia). Every city has its own personality, in the form of its streets and buildings and in its human architecture. Taking our cue from the buzz on the street, we have captured the flavour of each city through the eyes of the typical citizen: hot conversation topics, urban myths, the best places to eat and drink and to seek out after dark. It's a tempting cocktail for the urban adventurer.
