Calculus and Mechanics on Two-Point Homogenous Riemannian Spaces Alexey V.

Shchepetilov,2006-09-04 This is an introduction to classical and quantum mechanics on two-point homogenous Riemannian spaces, emphasizing spaces with constant curvature. Chapters 1-4 provide basic notations for studying two-body dynamics. Chapter 5 deals with the problem of finding explicitly invariant expressions for the two-body quantum Hamiltonian. Chapter 6 addresses one-body problems in a central potential. Chapter 7 investigates the classical counterpart of the quantum system introduced in Chapter 5. Chapter 8 discusses applications in the quantum realm.

Recent Trends in Algebraic Development Techniques Didier Bert,Christine Choppy,Peter Mosses,2004-02-02 This book constitutes the thoroughly refereed post-workshop proceedings of the 14th International Workshop on Algebraic Development Techniques, WADT'99, held in Toulouse, France in September 1999. The 23 revised full papers presented together with three invited papers were carefully reviewed and selected from 69 workshop presentations. The papers address the following topics: algebraic specification and other specification formalisms, test and validation, concurrent processes applications, logic and validation, combining formalisms, subsorts and partiality, structuring, rewriting, co-algebras and sketches, refinement, institutions and categories, and ASM

specifications.

Introduction to the ϵ -Principle Y. Eliashberg, Nikolai M. Mishachev, 2002 The latest volume in the AMS's high-profile GSM series. The book presents a very accessible exposition of a powerful, but difficult to explain method of solving Partial Differential Equations. Would make an excellent text for courses on modern methods for solving Partial Differential Equations. Very readable treatise of an important and remarkable technique. Strong bookstore candidate.

Bioinformatics: From Nucleic Acids and Proteins to Cell Metabolism Dietmar Schomburg, Uta Lessel, 2008-09-26 Bioinformatics, in this context the application of computer science to biological problems, has become an indispensable part of any research in the biosciences. Rapid developments in gene sequencing, structure determination as well as rational protein engineering and design have made it necessary for biologists, chemists, and computer scientists to channel their expertise into large

scale collaborative projects. This GBF Monograph gives a general overview of the latest versatile activities in bioinformatics: * Biological Data Bases * DNA and RNA * Protein Sequences and Structures * From Molecules to Cell Metabolism The articles have been selected from contributions to a conference on Bioinformatics/Computer Application in the Biosciences, held in October 1995 in Braunschweig at the German National Research Center for Biotechnology.

Grub Street (Routledge Revivals) Pat Rogers,2014-05-01 First published in 1972, this is the first detailed study of the milieu of the eighteenth-century literary hack and its significance in Augustan literature. Although the modern term ‘Grub Street’ has declined into vague metaphor, for the Augustan

satirists it embodied not only an actual place but an emphatic lifestyle. Pat Rogers shows that the major satirists – Pope, Swift and Fielding – built a potent fiction surrounding the real circumstances in which the scribblers lived, and the importance of this aspect of their writing. The author first locates the original Grub Street, in what is now the Barbican, and then presents a detailed topographical tour of the surrounding area. With studies of a number of key authors, as well as the modern and metaphorical development of the term ‘Grub Street’, this book offers comprehensive insight into the nature of Augustan literature and the social conditions and concerns that inspired it.

Chemistry Therald Moeller,2012-12-02 Chemistry with Inorganic Qualitative Analysis is a textbook that describes the application of the principles of equilibrium represented in qualitative analysis and the properties of ions arising from the reactions of the analysis. This book reviews the chemistry of inorganic substances as the science of matter, the units of measure used, atoms, atomic structure, thermochemistry, nuclear chemistry, molecules, and ions in action. This text also describes the

chemical bonds, the representative elements, the changes of state, water and the hydrosphere (which also covers water pollution and water purification). Water purification occurs in nature through the usual water cycle and by the action of microorganisms. The air flushes dissolved gases and volatile pollutants; when water seeps through the soil, it filters solids as they settle in the bottom of placid lakes. Microorganisms break down large organic molecules containing mostly carbon, hydrogen, nitrogen, oxygen, sulfur, or phosphorus into harmless molecules and ions. This text notes that natural purification occurs if the level of contaminants is not so excessive. This textbook is suitable for both chemistry teachers and students.
