Between Successful and Unsuccessful Ageing: Selected Aspects and Contexts Andrzej Klimczuk,Łukasz Tomczyk,2020-01-15 We provide to readers the 11th volume of the Czech-Polish-Slovak Studies in Andragogy and Social Gerontology series. We are delighted to announce that the presented study is the result of the work of scientists from seven countries: Austria, China, Ghana, Hungary, Japan, Poland, and Russia. This international collection of texts is part of the global discourse on the determinants of adult education and the functioning of people in late adulthood. The 11th volume is a collection of research results that show both the positive and negative dimensions of ageing through the prism of research experience from various geographical and cultural areas. The researchers invited to the presented volume tried to illustrate the issues assigned to the following topics: ageing with dignity; retirement age; assumptions and conditions resulting from living in the home; the relationship between challenges concerning life expectancy and needs; care and ageing services; and foundations and potential changes in pension systems. The research results presented in this volume have a common denominator, which is caring for the quality of life of the older people regardless of their place of residence. Thus, the study *Between Successful and Unsuccessful Ageing: Selected Aspects and Contexts* brings new insights from scientists who scrupulously characterize the complexity of processes that affect the positive and negative conditions of functioning in old age, which is a mosaic of various nuances. Inviting readers to familiarize themselves with the content of the monograph, we would like to thank the reviewers who contributed to the improvement of the quality of the texts and open new fields for participation in further joint publishing projects.

2018 Joint Trauma System (JTS) Clinical Practice Guidelines (CPGs) & DOD TRAUMA REGISTRY DATA DICTIONARY For Military and Civilian Health Care Practitioners ,2018-10-09 Almost 1,000 total pages; see index at beginning of publications for a complete list of included CPGs. Each CPG includes a section on the following: 1. GOAL 2. BACKGROUND 3. EVALUATION 4. TREATMENT 5. PERFORMANCE IMPROVEMENT (PI) MONITORING 6. SYSTEM REPORTING & FREQUENCY 7. RESPONSIBILITIES & 8. REFERENCES. OVERVIEW Clinical Practice Guidelines (CPGs) are the backbone of the system-wide JTS Performance Improvement program. Health data abstracted from patient records and after action reports is analyzed and distilled into globally relevant CPGs to remove medical practice variations and prevent needless deaths. The CPGs compiled from DoDTR data and used by healthcare providers worldwide are largely responsible for the decreased Case Fatality Rate for the wars in Iraq and Afghanistan. Examples are better transfusion practices; reduced burn morbidity and mortality; near elimination of extremity compartment syndrome; better patient care documentation; and improved communication across the spectrum of care between geographically dispersed facilities. CPGs are evidence-based and developed with experts in the military and civilian communities, deployed clinicians, Service trauma/surgical consultants, JTS leadership and formerly deployed Trauma Directors and Coordinators. JTS has a formalized process for developing, reviewing, updating, and approving CPGs. The guidelines are developed and implemented by clinical subject matter experts in response to needs identified in the military area of responsibility. CPGs were developed originally for U.S. Central Command. However, collaborative efforts are ongoing with the other Combatant Commands to customize CPGs to their COCOMs. INTRODUCTION TO THE JOINT TRAUMA SYSTEM (JTS) The Joint Trauma System (JTS) is the Department of Defense (DoD) authority for the military's trauma care system. The vision of the Joint Trauma System is that every Soldier, Sailor, Marine and Airman injured on the battlefield will have the optimum chance for survival and maximum potential for functional recovery. To achieve this vision, in 2006, the JTS implemented programs for data -driven trauma system development and improvement in addition to the collection of trauma data. As part of its data collection efforts, the JTS maintains a registry of trauma patients who received care at medical treatment facilities (MTFs). Since 2007, this registry – known as the DoD Trauma Registry (DoDTR) – has documented demographic, injury, treatment, and outcomes data for all trauma patients admitted to any DoD MTF, regardless of whether the injury occurred during on-going military operations, and is the largest military trauma data source in the world. Development of the DoDTR began during the early years of the Global War on Terror (GWOt) when the need to systematically improve trauma care for combat wounded resulted in the impromptu creation of a demonstration registry, known then as the Combat Trauma Registry (CTR). The CTR was constructed by the Center for AMEDD Strategic Studies (CASS); trauma-related information was initially abstracted into it from paper medical records received from trauma nurse coordinators (TNCs) at Landstuhl Regional Medical Center (LRMC) in Germany. Shortly after the demonstration program started, the Army Surgeon

General approved its transition to an operational mode, leading to the formation of the Joint Theater Trauma System (JTTS) and, eventually, the Joint Trauma System (JTS).

Engineering a Learning Healthcare System National Academy of Engineering, Institute of Medicine, 2011-06-14 Improving our nation's healthcare system is a challenge which, because of its scale and complexity, requires a creative approach and input from many different fields of expertise. Lessons from engineering have the potential to improve both the efficiency and quality of healthcare delivery. The fundamental notion of a high-performing healthcare system—one that increasingly is more effective, more efficient, safer, and higher quality—is rooted in continuous improvement principles that medicine shares with engineering. As part of its Learning Health System series of workshops, the Institute of Medicine's Roundtable on Value and Science-Driven Health Care and the National Academy of Engineering, hosted a workshop on lessons from systems and operations engineering that could be applied to health care. Building on previous work done in this area the workshop convened leading engineering practitioners, health professionals, and scholars to explore how the field might learn from and apply systems engineering principles in the design of a learning healthcare system. *Engineering a Learning Healthcare System: A Look at the Future: Workshop Summary* focuses on current major healthcare system challenges and what the field of engineering has to offer in the redesign of the system toward a learning healthcare system.

Shock Therapy for the American Health Care System Robert Arthur Levine M.D., 2009-07-23 Shock Therapy For the American Health Care System describes the problems of the health care system and offers a program of comprehensive reform that is more far-reaching than anything currently being proposed. From a veteran physician comes this remarkably clear-eyed look at what's wrong with how we administer and pay for health care and what can be done to fix it. In *Shock Therapy for the American Health Care System: Why Comprehensive Reform Is Needed*, Dr. Robert Levine offers an easily understandable diagnosis of the problems plaguing our current health care infrastructure, with discussions that include the roles of various stakeholders—insurance companies, big pharma, hospitals, health care providers, and patients. He also dispels a number of myths designed to make voters leery of any reform efforts. Levine's comprehensive plan addresses everything from bloated bureaucracies to unnecessary procedures to the handling of negligence and malpractice lawsuits/claims. Throughout, Levine backs his proposals with facts and comparisons to systems in various countries, and concludes that even now, with disaster looming, the ultimate goal of providing health insurance for every American is achievable and affordable.

Crises in Childbirth - Why Mothers Survive Daryl Dob, Anita Holdcroft, Griselda Cooper, 2018-04-19 This work includes Foreword by Phillip J S Steer, Professor of Obstetrics, Faculty of Medicine, Imperial College London. It includes Introduction by Gwyneth Lewis, National Clinical Lead for Maternal Health and Maternity Services, Department of Health, England and Director of the UK Confidential Enquiries into Maternal Deaths. 'The reductions in maternal mortality over the last half century are an eloquent testimony to the value of the technical expertise in life support that anaesthetists bring to the management of labour complications. Many direct causes of maternal death have been substantially reduced as a result of anaesthetic innovations ranging from advances in regional anaesthesia to the panoply of techniques used in intensive care. This book is essential reading.' - Phillip J Steer, in his Foreword. Offering a unique insight into real cases, this book covers the physiology, pharmacology and organisational factors involved in previous maternal deaths, highlighting key lessons to be learnt. This practical guide provides an ideal introduction for new anaesthetists and up-to-date information for senior practitioners, particularly those who cover labour wards. It is also invaluable for anaesthetic nurses, obstetricians and midwives. 'For more than 50 years the Confidential Enquiries into Maternal Deaths in the UK have collected together invaluable information about why mothers die in pregnancy and childbirth. For the first time ever, this unique book collects together all the valuable lessons into one volume. Experts in their fields provide a physiological, pharmacological, and evidence based commentary on the events of each death. The overall result pays homage to the value of collecting together lessons from the past, and we hope will help people avoid repetition of these situations in the future.' - Daryl Dob, Anita Holdcroft and Griselda Cooper, in the Preface.

Health Systems Thinking James A. Johnson, Douglas E. Anderson, Caren C. Rossow, 2018-10-15 This book is a primer focusing on systems thinking as it spans the domains of health administration, public health, and clinical practice. Currently, the accrediting commissions within public health, health administration, and nursing are including systems thinking as part of the core competencies in their respective fields and professions. Meanwhile, academic programs do not have the materials, other than journal articles, to give students the requisite understanding of systems thinking as is expected of the next generation of health professionals. This primer is designed to meet that void and serve as a supplemental reading for this important and timely topic. This is the only book of its kind that provides a broad introduction and demonstration of the application of health systems thinking.

Hybrid Artificial Intelligent Systems, Part I Manuel Grana Romy, M. Teresa Garcia Sebastian, 2010-06-14 The 5 International Conference on Hybrid Artificial Intelligence Systems (HAIS 2010) has become a unique, established and broad interdisciplinary forum for researchers and practitioners who are involved in developing and applying symbolic and sub-symbolic techniques aimed at the construction of highly robust and reliable problem-solving techniques, and bringing the most relevant achievements in this field. Overcoming the rigid encasing imposed by the arising orthodoxy in the field of artificial intelligence, which has led to the partition of researchers into so-called areas or fields, interest in hybrid intelligent systems is growing because they give freedom to design innovative solutions to the ever-increasing complexities of real-world problems. Noise and uncertainty call for probabilistic (often Bayesian) methods, while the huge amount of data in some cases asks for fast heuristic (in the sense of suboptimal and ad-hoc) algorithms able to give answers in acceptable time frames. High dimensionality demands linear and non-linear dimensionality reduction and feature extraction algorithms, while the imprecision and vagueness call for fuzzy reasoning and linguistic variable formalization. Nothing impedes real-life

problems to mix difficulties, presenting huge quantities of noisy, vague and high-dimensional data; therefore, the design of solutions must be able to resort to any tool of the trade to attack the problem. Combining diverse paradigms poses challenging problems of computational and methodological interfacing of several previously incompatible approaches. This is, thus, the setting of HAIS conference series, and its increasing success is the proof of the vitality of this exciting field.

Hybrid Artificial Intelligent Systems, Part I Manuel Grana Romay, Emilio Corchado, M. Teresa Garcia Sebastian, 2010-06-11 This book constitutes the proceedings of the 5th International Conference on Hybrid Artificial Intelligent Systems, held in San Sebastian, Spain, in June 2010.

Towards the Compassionate University Kathryn Waddington, 2021-02-26 This book makes a significant contribution to the need for compassion in the 21st-century neoliberal university. Compassion is a process that involves (i) noticing that suffering is present in an organization; (ii) making meaning of suffering in a way that contributes to a desire to alleviate it; (iii) feeling empathic concern; and (iv) taking action. There is increasing recognition of the crucial role of compassion as a core concern in education, health and social care, and globally to ensure the future sustainability of humankind and the planet. Drawing upon a wide range of interdisciplinary, theoretical, and professional perspectives—including social sciences, modern Darwinism, intersectionality, higher education policy, and organization studies—the book addresses the key challenges facing 21st-century universities. For example, intersectionality and higher education, staff and student health and well-being, and responding to global challenges such as the coronavirus pandemic. The book is relevant to university leaders, policy makers, educators, researchers, university staff, and students aspiring to develop their own understanding of the role of compassion in professional life. It is an important marker of the compassion turn in higher education and what this means for contemporary academic leadership, followership, and pedagogical practice.
