Newbie World Traveler HowExpert,Sarah Hinds-Friedl,2018-12-10 Coming from a small town in the mountains in California where “traveling” meant driving three hours to the nearest shopping mall, Sarah grew up with an itch to see the world. At 26, she’s visited over 20 countries with no plans of slowing down. Even though she’s seen quite a few places, Sarah isn’t a professional traveler. What she hopes to share with others is that you don’t have to have some wonderful job as a travel blogger or be super wealthy to see the world. With a bit of planning, anyone can do it. When Sarah isn’t looking up flights to distant places or planning her next trip home to California for some much-missed Mexican food, she’s chilling at her home in Buenos Aires. A Question Of Trust David Anderson,

State, Society and Information Technology in Asia Alan Chong,Faizal Bin Yahya,2016-04-01 Many maintain that the arrival of computers networked across sovereign borders and physical barriers is a liberating force that will produce a global dialogue of liberal hues but this book argues that this dominant paradigm needs to be supplemented by the perspective of alterity in the impact of Information Technology in different regions. Local experts draw upon a range of Asian cases to demonstrate how alterity, defined here as a condition of privileging the hitherto marginal and subterranean aspects of a capitalist world order through the capabilities of information and communications technologies, offers an alternative to the paradigm of inevitable material advances and political liberalization. Calling attention to the unique social and political uses being made of IT in Asia in the service of offline and online causes predominantly filtered by pre-existing social milieus the contributors examine the multiple dimensions of Asian differences in the sociology and politics of IT and show how present trends suggest that advanced electronic media will not necessarily be embraced in a smooth, unilinear fashion throughout Asia. This book will appeal to any reader interested in the nexus between society and IT in Asia.

Digilect Ágnes Veszelszki,2017-06-26 The high degree of internet penetration and its social (and linguistic) effects evidently influence how people, and especially the highly susceptible younger generations, use language. The primary aim of the book is not only to identify the characteristic

features of the digital language variety (this has already been done by several works) but to examine how digital communication affects the language of other mediums of communication: orality, handwritten texts, digitally created but not digitally perceived, that is printed texts, including in particular advertisements (which quickly respond to linguistic change). Naturally, the book presents the characteristics of the digital language variety (and coins the term digilect) but only to give a framework to the impact analysis. It is important to document changes in progress and thus direct attention to potential outcomes. The current linguistic change is different from previous ones primarily in its speed and form of spreading, and it not only brings innovative grammatical forms and writing/spelling solutions but may also have far-reaching cultural and educational consequences in the long run.

Conservation Technology Serge A. Wich, Alex K. Piel, 2021-08-31 The global loss of biodiversity is occurring at an unprecedented pace. Despite the considerable effort devoted to conservation science and management, we still lack even the most basic data on the distribution and density of the majority of plant and animal species, which in turn hampers our efforts to study changes over time. In

addition, we often lack behavioural data from the very animals most influenced by environmental changes; this is largely due to the financial and logistical limitations associated with gathering scientific data on species that are cryptic, widely distributed, range over large areas, or negatively influenced by human presence. To overcome these limitations, conservationists are increasingly employing technology to facilitate such data collection. Innovative solutions have been driven by dramatic advances in the conservation-technology interface. The use of camera traps, acoustic sensors, satellite data, drones, and computer algorithms to analyse the large datasets collected are all becoming increasingly widespread. Although specialist books are available on some of these individual technologies, this is the first comprehensive text to describe the breadth of available technology for conservation and to evaluate its varied applications, bringing together a team of international experts using a diverse range of approaches. Conservation Technology is suitable for graduate level students, professional researchers, practitioners and field managers in the fields of ecology and conservation biology.
