The Psychology of Science Text Comprehension Jose Otero,Jos, A. Le¢n,Arthur C. Graesser,2014-04-04 This volume's goal is to provide readers with up-to-date information on the research and theory of scientific text comprehension. It is widely acknowledged that the comprehension of science and technological artifacts is very difficult for both children and adults. The material is conceptually complex, there is very little background knowledge for most individuals, and the materials are often poorly written. Therefore, it is no surprise that students are turned off from learning science and technology. Given these challenges, it is important to design scientific text in a fashion that fits the cognitive constraints of the learner. The enterprise of textbook design needs to be effectively integrated with research in discourse processing, educational technology, and cognitive science. This book takes a major step in promoting such an integration. This volume: *provides an important integration of research and theory with theoretical, methodological, and educational applications; *includes a number of chapters that cover how science text information affects mental

representations and strategies; *introduces important suggestions about how text design and new technologies can be thought of as pedagogical features; and *establishes academic text taxonomies and a consensus of the criteria to organize inferences and other mental mechanisms.

Text Relevance and Learning from Text Gregory Schraw,Matthew T. McCrudden,Joseph P. Magliano,2011-08-01 Why do people from similar backgrounds who read the same text construct different meanings? Is there a question behind every reading goal, such that reading is an interactive process of asking and answering of questions? Do people who believe that knowledge is dynamic construct meaning differently than those who believe that knowledge is certain? This volume addresses questions such as these and presents cutting edge research and theory that explores how readers determine text relevance (i.e., the different values they assign to information as they read), how relevance affects understanding, and the implications of these studies for theories of text comprehension. This volume documents in a compelling manner the ongoing international effort to understand how text relevance affects reading and comprehension. Contributing authors represent major academic institutions on three continents and nine countries, demonstrating the multinational interest in text relevance. Why is there so much interest in text relevance? Learners are inundated with unprecedented amounts of information, and increased research regarding how readers process non-traditional texts (e.g., documents on the web) and multiple documents, for example, underscores the importance of understanding how readers determine the relevance of text information for personal, academic, or professional goals, which can enable educators to design learning situations that help learners get the most out of reading.

Text Representation Ted Sanders,Joost Schilperoord,Wilbert Spooren,2001 This book brings

together linguistics and psycholinguistics. Text representation is considered a cognitive entity: a mental construct that plays a crucial role in both text production and text understanding.The focus is on referential and relational coherence and the role of linguistic characteristics as processing instructions from a text linguistic and discourse psychology point of view. Consequently, this book presents various research methodologies: linguistic analysis, text analysis, corpus linguistics, computational linguistics, argumentation analysis, and the experimental psycholinguistic study of text processing. The authors compare, test, and evaluate linguistic and processing theories of text representation.A state of the art volume in an emerging field of interest, located at the very heart of our communicative behavior: the study of text and text representation.

Using Paired Text to Meet the Common Core William Bintz,2014-12-17 Teaching students to make connections across related texts promotes engagement and improves reading comprehension and content learning. This practical guide explains how to select and teach a wide range of picture books as paired text--two books related by topic, theme, or genre--in grades K-8. The author provides mini-lessons across the content areas, along with hundreds of recommendations for paired text, each linked to specific Common Core standards for reading literature and informational texts. In a large-size format for easy photocopying, the book includes 22 reproducible graphic organizers and other useful tools. Purchasers also get access to a Web page where they can download and print the reproducible materials.

Models of Understanding Text Bruce K. Britton,Arthur C. Graesser,2014-02-25 What is text understanding? It is the dynamic process of constructing coherent representations and inferences at multiple levels of text and context, within the bottleneck of a limited-capacity working memory. The field of text and discourse has advanced to the point where researchers have developed sophisticated

models of comprehension, and identified the particular assumptions that underlie comprehension mechanisms in precise analytical or mathematical detail. The models offer a priori predictions about thought and behavior, not merely ad hoc descriptions of data. Indeed, the field has evolved to a mature science. The contributors to this volume collectively cover the major models of comprehension in the field of text and discourse. Other books are either narrow -- covering only a single theoretical framework -- or do not focus on systematic modeling efforts. In addition, this book focuses on deep levels of understanding rather than language codes, syntax, and other shallower levels of text analysis. As such, it provides readers with up-to-date information on current psychological models specified in quantitative or analytical detail.

Mining Text Data Charu C. Aggarwal,ChengXiang Zhai,2012-02-03 Text mining applications have experienced tremendous advances because of web 2.0 and social networking applications. Recent advances in hardware and software technology have lead to a number of unique scenarios where text mining algorithms are learned. Mining Text Data introduces an important niche in the text analytics field, and is an edited volume contributed by leading international researchers and practitioners focused on social networks & data mining. This book contains a wide swath in topics across social networks & data mining. Each chapter contains a comprehensive survey including the key research content on the topic, and the future directions of research in the field. There is a special focus on Text Embedded with Heterogeneous and Multimedia Data which makes the mining process much more challenging. A number of methods have been designed such as transfer learning and cross-lingual mining for such cases. Mining Text Data simplifies the content, so that advanced-level students, practitioners and researchers in computer science can benefit from this book. Academic and corporate libraries, as well as ACM, IEEE, and Management Science focused on information security,

electronic commerce, databases, data mining, machine learning, and statistics are the primary buyers for this reference book.

Understanding Expository Text Bruce K. Britton,John B. Black,2017-11-01 Originally published in 1985, the various chapters in this volume give examples of research on all three aspects of text understanding – namely, structure, world knowledge and process. More than this, however, the research described represents a shift in emphasis from studying stories, which dominated the field in the late 1970s, to studying expository text. This focus on stories was probably due to the essential first step in any science of examining the simplest materials possible. However, the editors thought that it was time to shift the research focus from stories to expository text and this volume is their attempt to provide this transition.

Readability: Text and Context Alan Bailin,Ann Grafstein,2016-01-26 This book explores what makes a book readable by bringing together the relevant literature and theories, and situating them within a unified account. It provides a single resource that offers a principled discussion of the issues and their applications.

Text Editing, Print and the Digital World Professor Kathryn Sutherland,Professor Marilyn Deegan,2012-10-01 Traditional critical editing, defined by the paper and print limitations of the book, is now considered by many to be inadequate for the expression and interpretation of complex works of literature. At the same time, digital developments are permitting us to extend the range of text objects we can reproduce and investigate critically - not just books, but newspapers, draft manuscripts and inscriptions on stone. Some exponents of the benefits of new information technologies argue that in future all editions should be produced in digital or online form. By contrast, others point to the fact that print, after more than five hundred years of development, continues to

set the agenda for how we think about text, even in its non-print forms. This important book brings together leading textual critics, scholarly editors, technical specialists and publishers to discuss whether and how existing paradigms for developing and using critical editions are changing to reflect the increased commitment to and assumed significance of digital tools and methodologies.

Nomadic Text Brennan W. Breed,2014-05-13 Brennan W. Breed claims that biblical interpretation should focus on the shifting capacities of the text, viewing it as a dynamic process rather than a static product. Rather than seeking to determine the original text and its meaning, Breed proposes that scholars approach the production, transmission, and interpretation of the biblical text as interwoven elements of its overarching reception history. Grounded in the insights of contemporary literary theory, this approach alters the framing questions of interpretation from What does this text mean? to What can this text do?

Coherence in Spontaneous Text Morton Ann Gernsbacher,T. Givón,1995-03-23 The main theme running through this volume is that coherence is a mental phenomenon rather than a property

of the spoken or written text, or of the social situation. Coherence emerges during speech production-and-comprehension, allowing the speech receiver to form roughly the same episodic representation as the speech producer had in mind. In producing and comprehending a text, be it spoken or written, the interlocutors collaborate towards coherence. They negotiate for a common ground of shared topicality, reference and thematic structure – thus toward a similar mental representation of the text. In conversation, the negotiation takes place between the present participants. In writing or oral narrative, the negotiation takes place in the mind of the text producer, between the text producer and his/her mental representation of the mind of the absent or inactive interlocutor. The cognitive mechanisms that underlie face-to-face communication thus continue to shape text production and comprehension in non-interactive contexts.Most of the papers in this volume were originally presented at the Symposium on Coherence in Spontaneous Text, held at the University of Oregon in the spring of 1992.

Sign, Text, Scripture George Aichele,1997-10-01 This book is an introduction to the field of semiotics specifically directed to students of the Bible as well as to biblical scholars trained in other

methodologies. The primary focus is on what semiotics is now-how contemporary scholars actually approach the Bible semiotically. Attention is given to the history and varieties of semiotic theory, because as it has influenced the work of more recent thinkers, and because postmodern reappraisals of semiotics call for rereading of biblical texts. The book is organized according to topics ('Sign', 'Message', 'Text', etc.), which provide a way to interrogate semiotics as a system. This stimulating account also includes, for good measure, reflections on what theology has become, for believer and unbeliever alike, in a post-Nietzschean, post-Heideggerian world: What does it mean to see theology as 'ideology'-a complex and never wholly conscious network of understandings, preconceptions, and expectations about 'the way things are'.

The Text of the New Testament J. Harold Greenlee,2008-06-01 The Text of the New Testament is a brief introduction for the lay person into the process whereby the New Testament came to be. It describes the basics of ancient writing tools, manuscripts, the work of scribes, and how to think about differences in what the various manuscripts say. This is a revised and expanded edition with a completely new chapter on how contemporary English translations fit in with our understanding of the New Testament text. Geared to the lay person who is uninformed or confused about textual criticism, Greenlee begins this volume by explaining the production of ancient manuscripts. He then traces the history of the development of the New Testament text. Readers are next introduced to the basic principles of textual criticism, the concept of variant readings, and how to determine which variant has the greatest likelihood of being the original reading. To illustrate the basic principles, several sample New Testament texts are examined. The book concludes by putting textual criticism in perspective as involving only a minute portion of the entire New Testament text, the bulk of which is indisputably attested by the manuscripts.

The Literary Text in the Digital Age Richard J. Finneran,1996 Gathers essays by major figures in humanities computing on the implications of the new digital technology for the study of literary texts.

Text in Context A. D. H. Mayes,2000-09-07 The scholarly study of the Old Testament is now marked by a rich diversity of approaches and concerns. In the last two decades, an interest in the text and the implications for its interpretation is no longer the preserve of a single scholarly community, while the reconstruction of the history of the people from whom it derived has been transformed by new methods. This new book published under the auspices of the Society for Old Testament Study reflects these new approaches and developments, and has a particular concentration on literary and historical study. Thus, it not only clearly recognizes the diversity now inherent in 'Old Testament study', but also welcomes the integration into its field of the wide range of approaches available in current literary and historical investigation. The study of the biblical text and how it is received and interpreted by its various readerships has a certain logical priority over the study of its historical background and authorship. Yet an ongoing investigation of issues relating to the latter cannot await definitive conclusions on the former. So, essays on the text and its reception discuss primary issues which arise in Old Testament study, while those on background and authorship reflect the continued vitality of, and the fresh perspective possible in, more traditional scholarly concerns.

Computing Attitude and Affect in Text: Theory and Applications James G. Shanahan,Yan Qu,Janyce Wiebe,2006-01-18 Human Language Technology (HLT) and Natural Language Processing (NLP) systems have typically focused on the "factual" aspect of content analysis. Other aspects, including pragmatics, opinion, and style, have received much less attention. However, to achieve an adequate understanding of a text, these aspects cannot be ignored. The chapters in this book address the aspect of subjective opinion, which includes identifying different points of view, identifying

different emotive dimensions, and classifying text by opinion. Various conceptual models and computational methods are presented. The models explored in this book include the following: distinguishing attitudes from simple factual assertions; distinguishing between the author's reports from reports of other people's opinions; and distinguishing between explicitly and implicitly stated attitudes. In addition, many applications are described that promise to benefit from the ability to understand attitudes and affect, including indexing and retrieval of documents by opinion; automatic question answering about opinions; analysis of sentiment in the media and in discussion groups about consumer products, political issues, etc. ; brand and reputation management; discovering and predicting consumer and voting trends; analyzing client discourse in therapy and counseling; determining relations between scientific texts by finding reasons for citations; generating more appropriate texts and making agents more believable; and creating writers' aids. The studies reported here are carried out on different languages such as English, French, Japanese, and Portuguese. Difficult challenges remain, however. It can be argued that analyzing attitude and affect in text is an "NLP"-complete problem.
