Keirstead,2004-09-22 Computers in Broadcast and Cable Newsrooms: Using Technology in Television News Production takes readers through the use of computers and software in the broadcast/cable newsroom environment. Author Phillip O. Keirstead began writing about television news technology decades ago in an effort to help television news managers cope with technological change. In this text, he demonstrates the myriad ways in which today's journalism is tied to technology, and he shows how television news journalists rely on varied and complex technologies to produce timely, interesting, and informative broadcasts. The Weather Revolution Jack Fishman,Robert Kalish,2013-11-11 Weather, in all its variety and majesty, is both a source of Earth's awe-inspiring beauty and a powerful, threatening force. With the brilliant technological innovations of recent times, including lasers, satellites, and supercomputers, scientists have revolutionized the science of accurate weather prediction. As this intriguing work shows, the gap between the art and science of forecasting is rapidly narrowing, and the day when we will have accurate weekly and monthly, even yearly, forecasts is quickly approaching. Jack Fishman and Robert Kalish, acclaimed authors of Global Alert: The Ozone Pollution Crisis, clearly and eloquently explain the makings of weather from everyday winds and precipitation to the worst weather disasters. They show how the power of weather still holds us at its mercy and affects us all. Perilous downdrafts, undetectable by airplane pilots, can hurl landing planes into the runway to their doom. Freezing blasts of snow and ice cause traumatic accidents on our streets. Deadly tornadoes descend from thunderclouds, uprooting trees, devastating farmers' fields, and ripping buildings from their very foundations. And hurricanes, the most awesome storms on Earth, smash into the coast with vicious strength - flooding entire cities, lifting houses out to sea, and flattening acres of forest and farmland. Within the decade, scientists will have made a quantum leap in the ability to make accurate, longrange forecasts. Fishman and Kalish show us the stunning capabilities of a new brand of technology that is bringing about a revolution in weather forecasting. Radar, penetrating deep into the most menacing stormclouds, allows us to see the movement of raging winds so we can warn endangered communities before catastrophe strikes. Imminent laser and satellite technology will soon circle our Earth and send clear images of developing storms that will help meteorologists make predictions with an accuracy undreamed of today. In addition to recent breakthroughs, this fascinating work also describes pioneering scientists throughout history who used great technological innovations, from the advent of the computer to rocketry, to further our knowledge of weather and climate. Meteorology has rapidly evolved into a cutting-edge science that has irrevocably increased our understanding of the Earth. This remarkable work shows us the force of weather in all its glory and danger. And it paves the way for the revolution in weather science that will lead us into the future

Frank Batten Connie Sage,2011 Frank Batten Sr. (1927-2009) created the Weather Channel in 1982, despite mocking by colleagues in the media that around-the-clock weather broadcasts would be as exciting as watching paint dry. The network, and later its companion website, Weather.com, became the largest private weather company in the world and an American cultural icon. Yet few have heard of Batten, a media pioneer whose Virginia newspaper was the only major daily to back school integration. At a time when American corporate greed was making headlines, without fanfare and limelight Batten built a media empire centered on honesty, integrity, and ethics. Starting out in his uncle's newspaper business in Norfolk, Virginia, as a reporter and advertising salesman, he assumed leadership of the Virginian-Pilot and Ledger-Star at the age of twenty-seven and grew Landmark Communications into a media powerhouse. He championed racial equality, a position not often taken in Virginia during the 1950s. His flagship newspaper, the Pilot, was the only daily paper in Virginia to back court-ordered school desegregation. He created two billion-dollar businesses and gave away more than \$400 million to charity, nearly all of it to education. As chairman of the Associated Press from 1982 to 1987, he helped guide the news agency back on a sound financial footing. Batten also faced a tremendous personal challenge that would have sidelined many: he lost his vocal cords to cancer two years before starting the Weather Channel. This is the untold story of a man whose name few recognize, yet who helped change the face of the media in the twentieth century.

Weather on the Air Robert Henson,2013-01-22 From low humor to high drama, TV weather reporting has encompassed an enormous range of styles and approaches, triggering chuckles, infuriating the masses, and at times even saving lives. In Weather on the Air, meteorologist and science journalist Robert Henson covers it all—the people, technology, science, and show business that combine to deliver the weather to the public each day. Featuring the long-term drive to professionalize weathercasting; the complex relations between government and private forecasters; and the effects of climate-change science and the Internet on today’s broadcasts. With dozens of photos and anecdotes illuminating the many forces that have shaped weather broadcasts over the years, this engaging study will be an invaluable tool for students of broadcast meteorology and mass communication and an entertaining read for anyone fascinated by the public face of weather.
