   Themes in Old World Zooarchaeology Umberto Albarella,Cleia Detry,Sónia Gabriel,Catarina Ginja,Ana Elisabete Pires,2021-04-28 This new collection of papers from leading experts provides an overview of cutting-edge research in Old World zooarchaeology. The research presented here spans various areas across Europe, Western Asia and North Africa – from the Mediterranean to the Atlantic. Several chapters focus on Iberia, but the eastern Mediterranean and Britain are also featured. Thematically, the book covers many of the research areas where zooarchaeology can provide a significant contribution. These include animal domestication, bone modifications, fishing, fowling, economic and social status, as well as adaptation and improvement. The investigation of these topics is carried out using a diversity of approaches, thus making the book also a useful compendium of traditional as well as more recently developed methodological applications. All contributions aim to present zooarchaeology as a discipline that studies animals to understand people, and their richly diversified past histories. This will be a valuable source of information not just for specialists, but also for general archaeologists and, potentially, also historians, palaeontologists and geographers, who

have an interest for the research themes discussed in the book. The book is dedicated to Simon Davis, who has been a genuine pioneer in the development of modern zooarchaeology. It presents hugely stimulating case studies from the core areas where Davis has worked in the course of his career.

Current Topics in Biochemistry 1973 C.B. Anfinsen,2012-12-02 Current Topics in Biochemistry 1973 is based on a series of lectures held at the National Institutes of Health dealing with biochemistry. This group of lectures is the most recent in a program, which was established in the mid-1960s, to review various research fields for the scientific community at the Institutes. The topics for these series were chosen to emphasize active fields of general interest for a diverse audience of scientists. The speakers were therefore encouraged to present an overview of their fields rather than a detailed discussion of current research problems. The lectures in present collection cover the following topics: the problem of predicting the conformation of a protein from a knowledge of its amino acid sequence; studies on the structure of glutamic dehydrogenase; immunologic approaches to the study of proteins; the NIH shift and its implications for the mechanism of biological oxidations; separation of transcribable and repressed chromatin; gene expression in animal cells; and plasma lipoproteins and apolipoproteins.

Sense of Place and Place Attachment in Tourism Ning Chris Chen,C. Michael Hall,Girish Prayag,2021-06-03 Place is integral to tourism. In tourism, almost all issues can ultimately be

traced back to human—place interactions and human—place relationships. Sense of place, also referred to as place attachment, topophilia, and community sentiment, has received significant attention in tourism studies because it both contributes to, and is affected by, tourism. This book, written by notable authors in the field, examines sense of place and place attachment in terms of a typology of sense of place/place attachment that includes genealogical/historical, narrative/cultural, economic, ideological, cosmological, and dynamic elements. Dimensions of place attachment such as place identity, place dependence, and affective attachment are discussed as well as place marketing, place making, and destination management. Complete with a range of illustrative international cases and examples ranging from Santa Claus to the importance of place in indigenous and traditional cultures, this book represents a substantial addition to knowledge on the inseparable relationship between tourism and place and will be of great interest to all upper-level students and researchers of Tourism.

  <u>Hot Topics in Human Reproduction</u> Joseph G. Schenker,Martin H. Birkhaeuser,Andrea R. Genazzani,Liselotte Mettler,John J. Sciarra,2023-03-16 This new volume in the Reproductive Medicine for Clinicians series of the International Academy of Human Reproduction (IAHR) focuses on current hot topics in the field, their ethical and legal aspects and their impact on society. It covers topics such as Covid-19, religious and philosophical controversies,

possibilities that new technologies offer, human reproductive cloning problems, future challenges related to the heritable gene editing, therapeutic use of stem cells and stem cell factors and the role of receptors in steroids hormone action. This volume also offers an analysis of important innovations and new possibilities such as the use of artificial intelligence in reproductive medicine and the future of prenatal testing. The volume also discusses the issues of pregnancies in advanced paternal age, ethical and legal aspects of gametes donation, sex preselection, surrogate motherhood and infertility in overweight or obese PCOS patients. Chapters on the ethical and legal aspects of fertility preservation in woman, in children with cancer, and in patients sparing treatments in gynecological oncology are also included. This new volume in the series is a valuable resource for gynecologists, obstetricians, endocrinologists, general practitioners and all specialists dealing with reproductive health.

  Mathematical Topics on Modelling Complex Systems
J. A. Tenreiro Machado,Dimitri Volchenkov,2022-06-08 This book explores recent developments in theoretical research and mathematical modelling of real-world complex systems, organized in four parts. The first part of the book is devoted to the mathematical tools for the design and analysis in engineering and social science study cases. We discuss the periodic evolutions in nonlinear chemical processes, vibro-compact systems and their behaviour, different types of metal—semiconductor

self-assembled samples, made of silver nanowires and zinc oxide nanorods. The second part of the book is devoted to mathematical description and modelling of the critical events, climate change and robust emergency scales. In three chapters, we consider a climate-economy model with endogenous carbon intensity and the behaviour of Tehran Stock Exchange market under international sanctions. The third part of the book is devoted to fractional dynamic and fractional control problems. We discuss the novel operational matrix technique for variable-order fractional optimal control problems, the nonlinear variable-order time fractional convection–diffusion equation with generalized polynomials The fourth part of the book concerns solvability and inverse problems in differential and integro-differential equations. The book facilitates a better understanding of the mechanisms and phenomena in nonlinear dynamics and develops the corresponding mathematical theory to apply nonlinear design to practical engineering. It can be read by mathematicians, physicists, complex systems scientists, IT specialists, civil engineers, data scientists and urban planners.

Weighted Norm Inequalities and Related Topics J. García-Cuerva,J.L. Rubio de Francia?,1985 The unifying thread of this book is the topic of Weighted Norm Inequalities, but many other related topics are covered, including Hardy spaces, singular integrals, maximal operators, functions of bounded mean oscillation and vector valued inequalities. The emphasis is placed on basic ideas; problems are first treated in a simple context and only afterwards are further results

examined.

Android Tips and Tricks Guy Hart-Davis,2014-12-11 Discover hundreds of tips and tricks you can use right away with your Android device to get more done, and have more fun. Topological Complexity and Related Topics Mark Grant,Gregory Lupton,Lucile Vandembroucq,2018-02-14 This volume contains the proceedings of the mini-workshop on Topological Complexity and Related Topics, held from February 28–March 5, 2016, at the Mathematisches Forschungsinstitut Oberwolfach. Topological complexity is a numerical homotopy invariant, defined by Farber in the early twenty-first century as part of a topological approach to the motion planning problem in robotics. It continues to be the subject of intensive research by homotopy theorists, partly due to its potential applicability, and partly due to its close relationship to more classical invariants, such as the Lusternik–Schnirelmann category and the Schwarz genus. This volume contains survey articles and original research papers on

topological complexity and its many generalizations and variants, to give a snapshot of contemporary research on this exciting topic at the interface of pure mathematics and engineering.

  Smashing Android UI Juhani Lehtimaki,2012-10-01 Designers and developers, create smashing apps for Android devices If you're developing applications for Android smartphones and tablets, you know it isn't enough just to create the app. The application has to be intuitive, well laid out, and easy to use. Smashing Android UI shows you just how to do that. Starting with basic components, this practical, full-color book shows you how to create scalable layouts, make use of adaptive layouts and fragments, follow Android design best practices, and design sleek, intuitive user interfaces using Android UI design patterns. One of the newest guides in the terrific Smashing Magazine book series, this book takes you beyond the basics with expert techniques and innovative ideas. Learn smart solutions that will help you avoid pitfalls while building apps that can scale up to a multitude of possible Android device-and-browser combinations. Teaches practical techniques for developing and designing applications that work on all Android phones and tablets Helps developers who have Android experience, but not necessarily design experience, as well as designers who want to follow Android design best practices and patterns Starts with how to use simple components and then moves on to building scalable layouts Covers adaptive layouts and fragments, responsive design, and how to design user interfaces using Android UI design patterns

Smashing Android UI: Responsive Android UI and Design Patterns for Phones and Tablets helps you create apps for the hottest thing in technology-- Android devices!

   Advances in Knowledge-Based and Intelligent Information and Engineering Systems Manuel Graña,2012 In this 2012 edition of Advances in Knowledge-Based and Intelligent Information and Engineering Systems the latest innovations and advances in Intelligent Systems and related areas are presented by leading experts from all over the world. The 228 papers that are included cover a wide range of topics. One emphasis is on Information Processing, which has become a pervasive phenomenon in our civilization. While the majority of Information Processing is becoming intelligent in a very broad sense, major research in Semantics, Artificial Intelligence and Knowledge Engineering supports the domain specific applications that are becoming more and more present in our everyday living. Ontologies play a major role in the development of Knowledge

Engineering in various domains, from Semantic Web down to the design of specific Decision Support Systems. Research on Ontologies and their applications is a highly active front of current Computational Intelligence science that is addressed here. Other subjects in this volume are modern Machine Learning, Lattice Computing and Mathematical Morphology.The wide scope and high quality of these contributions clearly show that knowledge engineering is a continuous living and evolving set of technologies aimed at improving the design and understanding of systems and their relations with humans.

 Computer Methods Part B ,2009-11-05 The combination of faster, more advanced computers and more quantitatively oriented biomedical researchers has recently yielded new and more precise methods for the analysis of biomedical data. These better analyses have enhanced the conclusions that can be drawn from biomedical data, and they have changed the way that experiments are designed and performed. This volume, along with previous and forthcoming Computer Methods volumes for the Methods in Enzymology serial, aims to inform biomedical researchers about recent applications of modern data analysis and simulation methods as applied to biomedical research. Presents step-by-step computer methods and discusses the techniques in detail to enable their implementation in solving a wide range of problems Informs biomedical researchers of the modern data analysis methods that have developed alongside computer hardware Presents methods at the nuts and bolts level to

identify and resolve a problem and analyze what the results mean

   Cognitive and Affective Perspectives on Immersive Technology in Education Zheng, Robert Z.,2020-05-22 Immersive technology as an umbrella concept consists of multiple emerging technologies including augmented reality (AR), virtual reality (VR), gaming, simulation, and 3D printing. Research has shown immersive technology provides unique learning opportunities for experiential learning, multiple perspectives, and knowledge transfer. Due to its role in influencing learners' cognitive and affective processes, it is shown to have great potential in changing the educational landscape in the decades to come. However, there is a lack of general cognitive and affective theoretical framework to guide the diverse aspects of immersive technology research. In fact, lacking the cognitive and affective theoretical framework has begun to hamper the design and application of immersive technology in schools and related professional training. Cognitive and Affective Perspectives on Immersive Technology in Education is an essential research book that explores methods and implications for the design and implementation of upcoming immersive technologies in pedagogical and professional development settings. The book includes case studies that highlight the cognitive and affective processes in immersive technology as well as the successful applications of immersive technology in education. Featuring a wide range of topics such as curriculum design, K-12 education, and mobile

learning, this book is ideal for academicians, educators, policymakers, curriculum developers, instructional designers, administrators, researchers, and students.
