Rapid Screening of Tactical Imagery as a Function of Display Time James A. Thomas, Robert Sadacca, 1967 An experimental study was made to assess the effectiveness of two techniques for rapid screening to select imagery frames of high military potential and to determine the effects of variations in display time on screening performance. Two samples of image interpreters, each consisting of three matched groups, screened three sets of imagery at three different display time intervals (5, 15, and 25 seconds per frame for Sample 1; 10, 20, and 30 seconds per frame for Sample 2). Each interpreter was instructed to perform two screening functions while scanning each print--(1) annotate on the frame all areas of military activity he detected; and (2) assign to each print a priority rating of High, Medium, or Low to indicate estimated intelligence value of the frame. Interpreter performance under the two methods was compared in terms of accuracy and validity of the annotations and priority ratings across the six screening time intervals. Results of the study definitely favored the priority ratings technique over annotation screening. The ratings, of high accuracy even with short viewing time, improved significantly both in accuracy and in validity with longer display time. Generally, performance was better on the measures which were less complex and showed fewer target areas. Validity of the number of annotations on a frame, generally low, did not vary significantly with display time. More incorrect as well as correct annotations were made, a finding similar to previous BESRL findings for unspeeded interpretation performance.

Displaying Time Rebecca M. Brown, 2017-05-11 From the fluttering fabric of a tent, to the blurred motion of the potter's wheel, to the rhythm of a horse puppet's wooden hooves—these scenes make up a set of mid-1980s art exhibitions as part of the U.S. Festival of India. The festival was conceived at a meeting between Indira Gandhi and Ronald Reagan to strengthen relations between the two countries at a time of late Cold War tensions and global economic change, when America's image of India was as a place of desperate poverty and spectacular fantasy. *Displaying Time* unpacks the intimate, small-scale durations of time at work in the gallery from the transformation of clay into ceramic to the one-on-one, personal encounters between museum visitors and artists. Using extensive archival research and interviews with artists, curators, diplomats, and visitors, Rebecca Brown analyzes a selection of museum shows that were part of the Festival of India to unfurl new exhibitionary modes: the time of transformation, of interruption, of potential and the future, as well as the contemporary and the now.

Displaying Time Series, Spatial, and Space-Time Data with R Oscar Perpinan Lamigueiro, 2014-04-04 Code and Methods for Creating High-Quality Data Graphics A data graphic is not only a static image, but it also tells a story about the data. It activates cognitive processes that are able to detect patterns and discover information not readily available with the raw data. This is particularly true for time series, spatial, and space-time datasets. Focusing on the exploration of data with visual methods, *Displaying Time Series, Spatial, and Space-Time Data with R* presents methods and R code for producing high-quality graphics of time series, spatial, and space-time data. Practical examples using real-world datasets help you understand how to apply the methods and code. The book illustrates how to display a dataset starting with an easy and direct approach and progressively adding improvements that involve more complexity. Each of the book's three parts is devoted to different types of data. In each part, the chapters are grouped according to the various visualization methods or data characteristics. Web Resource Along with the main graphics from the text, the author's website offers access to the datasets used in the examples as well as the full R code. This combination of freely available code and data enables you to practice with the methods and modify the code to suit your own needs.

Show Time Lee Ann Fujii, 2021-09-15 In *Show Time*, Lee Ann Fujii asks why some perpetrators of political violence, from lynch mobs to genocidal killers, display their acts of violence so publicly and extravagantly. Closely examining three horrific and extreme episodes—the murder of a prominent Tutsi family amidst the genocide in Rwanda, the execution of Muslim men in a Serb-controlled village in Bosnia during the Balkan Wars, and the lynching of a twenty-two-year old Black farmhand on Maryland's Eastern Shore in 1933—Fujii shows how violent displays are staged to not merely to kill those perceived to be enemies or threats, but also to affect and influence observers, neighbors, and the larger society. Watching and participating in these violent displays profoundly transforms those involved, reinforcing political identities, social hierarchies, and power structures. Such public spectacles of violence also force members of the community to choose sides—openly show support for the goals of the violence, or risk becoming victims, themselves. Tracing the ways in which public displays of violence unfold, *Show Time* reveals how the perpetrators exploit the fluidity of social ties for their own ends.

The Latest Development in the Electroluminescent Display of Time Readout System LeRoy C. Meyer, 1961 This is a report on the present state of the art in the development of a system for using electroluminescent indicators for digital display of timing information on motion picture film. It was found that a display, in the form of a matrix of dots, could be contact printed onto color film with an exposure time of one millisecond.

Managing Screen Time in an Online Society Oliveira, Lídia, 2019-02-22 The number of hours individuals spend in front of screens, such as smartphones, televisions, computers, and tablets, is enormous in today's society because screen time plays a very important role in work contexts and an even more significant role in social interaction and cultural consumption. This almost compulsive relationship with screens is more evident in children and young people and can have a lasting impact on how a society approaches screen time. *Managing Screen Time in an Online Society* is a collection of innovative research on how screen time seduces the person to stay in the online interaction leaving her/him in a state of alienation from her/his face-to-face context. While highlighting the methods and applications of time management in the context of screen time, especially during leisure, social interaction, and cultural consumption, this book covers topics including media consumption, psychology, and social networks. This book is ideal for researchers, students, and professionals seeking emerging information on the relationship between online

interaction and personal relationships.

Natural Time Analysis: The New View of Time Panayiotis Varotsos,Nicholas V. Sarlis,Efthimios S. Skordas,2011-08-14 This book deals with the theory and the applications of a new time domain, termed natural time domain, that has been forwarded by the authors almost a decade ago (P.A. Varotsos, N.V. Sarlis and E.S. Skordas, Practica of Athens Academy 76, 294-321, 2001; Physical Review E 66, 011902, 2002). In particular, it has been found that novel dynamical features hidden behind time series in complex systems can emerge upon analyzing them in this new time domain, which conforms to the desire to reduce uncertainty and extract signal information as much as possible. The analysis in natural time enables the study of the dynamical evolution of a complex system and identifies when the system enters a critical stage. Hence, natural time plays a key role in predicting impending catastrophic events in general. Relevant examples of data analysis in this new time domain have been published during the last decade in a large variety of fields, e.g., Earth Sciences, Biology and Physics. The book explains in detail a series of such examples including the identification of the sudden cardiac death risk in Cardiology, the recognition of electric signals that precede earthquakes, the determination of the time of an impending major mainshock in Seismology, and the analysis of the avalanches of the penetration of magnetic flux into thin films of type II superconductors in Condensed Matter Physics. In general, this book is concerned with the time-series analysis of signals emitted from complex systems by means of the new time domain and provides advanced students and research workers in diverse fields with a sound grounding in the fundamentals of current research work on detecting (long-range) correlations in complex time series. Furthermore, the modern techniques of Statistical Physics in time series analysis, for example Hurst analysis, the detrended fluctuation analysis, the wavelet transform etc., are presented along with their advantages when natural time domain is employed.

Screen Time Lisa Guernsey,2012-03-20 As a mother, Lisa Guernsey wondered about the influence of television on her two young daughters. As a reporter, she resolved to find out. What she first encountered was tired advice, sensationalized research claims, and a rather draconian mandate from the American Academy of Pediatrics: no TV at all before the age of two. But like many parents, she wanted straight answers and realistic advice, so she kept digging: she visited infant-perception labs and child development centers around the country. She interviewed scores of parents, psychologists, cognitive scientists, and media researchers, as well as programming executives at Noggin, Disney, Nickelodeon, Sesame Workshop, and PBS. Much of what she found flies in the face of conventional wisdom and led her to conclude that new parents will be best served by focusing on “the three C’s”: content, context, and the individual child. Advocating a new approach to television and DVDs, Guernsey focuses on infants to five-year-olds and goes beyond the headlines to explore what exactly is “educational” about educational media. She examines how play and language development are affected by background and foreground television and how to choose videos that are age-appropriate. She explains how to avoid the hype of “brain stimulation” and focus instead on social relationships and the building blocks of language and literacy. Along the way, Guernsey highlights independent research on shows ranging from Dora the Explorer to Dragon Tales, and distills some surprising new findings in the field of child development. Into the Minds of Babes is a fascinating book that points out how little credible research exists to support the AAP’s dire recommendation. Parents, teachers, and psychologists will be relieved to learn positive approaches to using videos with young children and will be empowered to make their own informed choices.

Avidly Reads Screen Time Phillip Maciak,2023-05-16 What happens when screen time is all the time? In the early 1990s, the phrase “screen time” emerged to scare parents about the dangers of too much TV for kids. Screen time was something to fret over, police, and judge in a low-grade moral panic. Now, “screen time” has become a metric not only for good parenting, but for our adult lives as well. There’s even an app for it! In the streaming era—and with streaming made nearly ubiquitous during COVID-19—almost every aspect of our day is mediated by these bright surfaces. Whether it was ever the real villain in the first place, or merely a convenient proxy for unaddressed familial, social, and institutional failures, screen time is now all the time. Avidly Reads Screen Time is a funny, insightful work of cultural criticism and history about how we define screens, and how they now define us. From Mad Men to iCarly, Vine to FaceTime, binge-watching to doom-scrolling, Phillip Maciak leads us on a sometimes heartwarming, sometimes harrowing tour of the media that brings us together and tears us apart.
