The Golden Ticket Lance Fortnow, 2013 Provides a nontechnical introduction to the P-NP problem in computing—which asks whether every problem that can be verified quickly by a computer can also be solved quickly by a computer—its rich history, and its algorithmic implications for everything we do with computers and beyond.

Captured! Brenda M. Tranter, 2022-08-03 Australian Lieutenant, A.E. Tranter, from Heathcote, Victoria, (Australia) spends time in Malaya training young soldiers during the waiting period prior to WW2 in Asia. He survives the battle against the Japanese in Muar and the fall of Singapore, before escaping by boat to the wilds of Sumatra. However, his luck fails and he becomes one of the thousands of prisoners of war in the slave labour camps in Sumatra. He writes a tender book for his little daughter which he manages to keep hidden from the guards throughout his ordeal. Remarkably the book is all about the pleasant and beautiful things he has seen and learned in his enforced travel, even if witnessed from the heat and stench of locked box cars “ ... in spite of the discomfort , we saw much that was interesting and beautiful”. Despite this long ordeal, his writing conveys a message of tolerance, understanding and responsibility. Tranter is amongst those put to work building a road through the jungle in Atjeh, then later, the second death railway - the Pakenbaroe/Moeara Railway, ironically completed on the day WW2 ended; never used and now forgotten in Australia by all but a few. Here the Japanese and Koreans’ treatment of the prisoners becomes increasingly brutal with death and disease common, especially amongst “ the Romushas” - Asian enforced labourers - 80 000 of whom die. Meanwhile his little daughter is growing up in his hometown, under her mother’s care, both unaware of her father’s whereabouts.

Handbook of Media Management and Economics Alan B. Albarran, Sylvia M. Chan-Olmsted, Michael O. Wirth, 2006 This comprehensive Handbook provides a synthesis of current work and research in media management and economics. The volume has been developed around two primary objectives: assessing the state of knowledge for the key topics in the media management and economics fields; and establishing the research agenda in these areas, ultimately pushing the field in new directions. Edited by three well-known and widely published scholars, the Handbook is the definitive source for study in media management and economics. Its chapters are organized into parts addressing the

theoretical components, key issues, analytical tools, and future directions for research. Each chapter offers the current state of theory and scholarship of a specific area of study, and the volume contributors--all well established in their areas of specialty--represent domestic and international scholarship. With its unparalleled breadth of content from expert authors, the Handbook provides background knowledge of the various theoretical dimensions and historical paradigms, and establishes the direction for the next phases of research in this growing arena of study. Standing alone as a thorough summary of existing theory and research, the Handbook of Media Management and Economics will serve to stimulate future thought and research in the media management and economics disciplines. As such, this volume will be a required reference for students, professors, and industry practitioners for years to come.

Hunting Saleh James H. Dobbins, 2020-01-23 Louise McCabe, a former intelligence analyst for the Defense Intelligence Agency (DIA), knows Saleh is brutal, brilliant, and cold-blooded. Saleh is no longer an intellectual exercise but is an existential threat to Louise and everyone she loves. The subject knows little of real value other than the attack will be local. Following the interrogation, they realize if he was using the name Saleh, there is a mole in the IC. What they need more than anything is intelligence, and they have none. Louise knows she must become the intelligence gatherer. She knows the risks she must take, her lack of field experience, and how it will endanger her and her family, but she has no choice.

Crime Scene Investigation Roy Fenoff, Jacqueline T. Fish, Larry S. Miller, Edward W. Wallace, Michael C. Braswell, 2022-12-26 Crime Scene Investigation offers an innovative approach to learning about crime scene investigation, taking the reader from the first response on the crime scene to documenting crime scene evidence and preparing evidence for courtroom presentation. It includes

topics not normally covered in other texts, such as forensic anthropology and pathology, entomology, arson and explosives, and the electronic crime scene. Numerous photographs and illustrations complement text material, and a chapter-by-chapter fictional narrative also provides the reader with a qualitative dimension of the crime scene experience.

Investigating Couples Tom Soter, 2015-10-05 Male-female detective pairings often exhibit offbeat, dark humor and considerable chemistry as they investigate crimes. They have proven to be both entertaining and alluring on screen and television. This work reveals an evolutionary progression in the depictions of three detective duos: the married pair Nick and Nora Charles of *The Thin Man*, black-humored special agents John Steed and Emma Peel of *The Avengers*, and finally the smoldering Mulder and Scully in *The X-Files*. Ten chapters offer critical analysis, rich with background information and insider observations. Production comments are given throughout. Three appendices (one for each series) offer episode guides with original broadcast dates, credits and brief synopses.

Rembrandt Redux Hugo Uyttenhove, 2012-01-13 The story begins in 1647 when Rembrandt is at

the height of his career and follows a fictional account of one painting to the present when art dealer Tom Ardens buys it at a tag sale. He thinks its a Rembrandt and wants to sell it as soon as possible to solve his financial problems. During the week of the authentication process, the infamous German criminal Fritz Schroller thwarts his plan. Tom gets help from ex-detective Marco Vincente to battle Schroller as the origin of the painting is questioned and Tom's windfall is jeopardized. What people have said about the author's books: Uyttenhove's writing style is similar to the interpretation of art itself: varied and personal, yet unifying and global, all in one fell swoop. A study of arts role in society and how its apprized historically, culturally and individually, Uyttenhove's book is essentially an examination of how people across the globe, and from all walks of life, are willing to risk their lives for art. Omar Figueras, The US Review of Books What I liked best about this fiction story is the balance between intellect, emotion and action. The story is well informed about art, the business of art and the operation of art museums internationally. It gave me new reasons to care about art and admire professionals in various occupations related to the business side of art. At the same time, there was danger and suspense throughout, giving me that edge of the seat feeling. Citizen John, Amazon.com United States of America V. Smith ,1980

Centurion TK Lawyer,2023-10-06 Centurion thinks he has it all—until the one subject plaguing him and affecting his colleagues, in strange, undesirable ways, stands in front of him. As second-in-command of the prestigious volunteer band of angels called The Guardian League, co-guardian to a talented charge in New Orleans, Louisiana, and hosting a wealth of swooning ladies available at his every whim, nothing in his life was missing. Yet one day, at an art exhibition, he encounters April—a woman as strong and hot as the human beverage that tickles his fancy. A beautiful, lush female that stokes the fire deep within him he never knew existed and makes him question his self-imposed rules

regarding human-angel relationships. He doesn't know what to do. Yet, he knows he can't lose her. Overwhelmed by his sudden introduction, April never thought she would find a buff, strong angel standing in front of her, much less, asking her for a date. Yet, Centurion goes by his own set of rules, and he doesn't want permanency. He wants April—on his own terms and at his beck and call. April can't agree. Still, there is something about Centurion that draws her to the cocky, devilishly handsome but mostly incorrigible male and it's not just his good looks, his killer kisses, or his suave finesse. There is something more. Will she stick around to find out what it is? Will they form a compromise and allow love to bind them together? Or will Centurion's carefree lifestyle wedge them apart—forever? PUBLISHER NOTE: Paranormal Romance. Angels and Demons. 63,600 words. All characters depicted in this work of fiction are 18 years of age or older.

Numerical Quantum Dynamics W. Schweizer, 2001-12-31 It is an indisputable fact that computational physics form part of the essential landscape of physical science and physical education. When writing such a book, one is faced with numerous decisions, e. g. : Which topics should be included? What should be assumed about the readers' prior knowledge? How should balance be achieved between numerical theory and physical application? This book is not elementary. The reader should have a background in qu- tum physics and computing. On the other way the topics discussed are not addressed to the specialist. This work bridges hopefully the gap between - vanced students, graduates and researchers looking for computational ideas beyond their fence and the specialist working on a special topic. Many imp- tant topics and applications are not considered in this book. The selection is of course a personal one and by no way exhaustive and the material presented obviously reflects my own interest. What is Computational Physics? During the past two decades computational physics became the third fun- mental physical discipline. Like the 'traditional partners'

experimental physics and theoretical physics, computational physics is not restricted to a special area, e. g. , atomic physics or solid state physics. Computational physics is a methodical ansatz useful in all subareas and not necessarily restricted to physics. Of course these methods are related to computational aspects, which means numerical and algebraic methods, but also the interpretation and visualization of huge amounts of data.
