Legal Tech, Smart Contracts and Blockchain Marcelo Corrales,Mark Fenwick,Helena Haapio,2019-02-07 There is a broad consensus amongst law firms and in-house legal departments that next generation “Legal Tech” – particularly in the form of Blockchain-based technologies and Smart Contracts – will have a profound impact on the future operations of all legal service providers. Legal Tech startups are already revolutionizing the legal industry by increasing the speed and efficiency of traditional legal services or replacing them altogether with new technologies. This on-going process of disruption within the legal profession offers significant opportunities for all business. However, it also poses a number of challenges for practitioners, trade associations, technology vendors, and regulators who often struggle to keep up with the technologies, resulting in a widening regulatory “gap.” Many uncertainties remain regarding the scope, direction, and effects of these new technologies and their integration with existing practices and legacy systems. Adding to the challenges is the growing need for easy-to-use contracting solutions, on the one hand, and for protecting the users of such solutions, on the other. To respond to the challenges and to provide better legal communications, systems, and services Legal Tech scholars and practitioners have found allies in the emerging field of Legal Design. This collection brings together leading scholars and practitioners working on these issues from diverse jurisdictions. The aim is to introduce Blockchain and Smart Contract technologies, and to examine their on-going impact on the legal profession, business and regulators.

Private International Law and the Internet Dan Jerker B. Svantesson,2021-08-05 In this, the fourth edition of Private International Law and the Internet, Professor Dan Svantesson provides a detailed and insightful account of what has emerged as the most crucial current issue in private international law; that is, how the Internet affects and is affected by the five fundamental questions: When should a lawsuit be entertained by the courts? Which state's law should be applied? When should a court that can entertain a lawsuit decline to do so? How wide 'scope of jurisdiction' should be afforded to a court with jurisdiction over a dispute? And will a judgment rendered in one country be recognized and enforced in another? Professor Svantesson identifies and investigates twelve characteristics of Internet communication that are relevant to these questions and then proceeds with a detailed discussion of what is required of modern private international law rules. Focus is placed on several issues that have far-reaching practical consequences in the Internet context, including the following: cross-border defamation; cross-border business contracts; cross-border consumer contracts; and cross-border intellectual property issues. A wide survey of private international law solutions encompasses insightful and timely analyses of relevant laws adopted in a variety of jurisdictions, including Australia, England, Hong Kong SAR, the United States, Germany, Sweden, and China, as well as in a range of international instruments. There is also a chapter on advances in geo-identification technologies and their special value for legal practice. The book concludes with two model international conventions, one on cross-border defamation and one on cross-border contracts, as well as a set of practical checklists to guide legal practitioners faced with cross-border matters within the discussed fields. Professor Svantesson's book brings together a wealth of research findings in the overlapping disciplines of law and technology that will be of particular utility to practitioners and academics working in this complex and rapidly changing field. His thoughtful analysis of the interplay of the developing Internet and private international law will also be of great value, as will the tools he offers with which to anticipate the future. Private International Law and the Internet provides a remarkable stimulus to continue working towards globally acceptable private international law rules for communication via the Internet.
