Rebecca Goldstein

Plato at the Googleplex Rebecca Goldstein, 2014 Acclaimed philosopher and novelist Rebecca Newberger Goldstein provides a dazzlingly original plunge into the drama of philosophy, revealing its hidden role in today's debates on religion, morality, politics, and science.

Plato at the Googleplex Rebecca Goldstein, 2015-01-06 Is philosophy obsolete? Are the ancient questions still relevant in the age of cosmology and neuroscience, not to mention crowd-sourcing and cable news? The acclaimed philosopher and novelist Rebecca Newberger Goldstein provides a dazzlingly original plunge into the drama of philosophy, revealing its hidden role in today's debates on religion, morality, politics, and science. At the origin of Western philosophy stands Plato, who got about as much wrong as one would expect from a thinker who lived 2,400 years ago. But Plato's role in shaping philosophy was pivotal. On her way to considering the place of philosophy in our ongoing intellectual life, Goldstein tells a new story of its origin, re-envisioning the extraordinary culture that produced the man who produced philosophy. But it is primarily the fate of philosophy that concerns her. Is the discipline no more than a way of biding our time until the scientists arrive on the scene? Have they already arrived? Does philosophy itself ever make progress? And if it does, why is so ancient a figure as Plato of any continuing relevance? Plato at the Googleplex is Goldstein's startling investigation of these conundra. She interweaves her narrative with Plato's own choice for bringing ideas to life—the dialogue. Imagine that Plato came to life in the twenty-first century and embarked on a multicity speaking tour. How would he handle the host of a cable news program who denies there can be morality without religion? How would he mediate a debate between a Freudian psychoanalyst and a tiger mom on how to raise the perfect child? How would he answer a neuroscientist who, about to scan Plato's brain, argues that science has definitively answered the questions of free will and moral agency? What would Plato make of Google, and of the idea that knowledge can be crowd-sourced rather than reasoned out by experts? With a philosopher's depth and a novelist's imagination and wit, Goldstein probes the deepest issues confronting us by allowing us to eavesdrop on Plato as he takes on the modern world. (With black-and-white photographs throughout.)

Humans at Work in the Digital Age Shawna Ross, Andrew Pilsch, 2019-12-05 Humans at Work in the Digital Age explores the roots of twenty-first-century cultures of digital textual labor, mapping the diverse physical and cognitive acts involved, and recovering the invisible workers and work that support digital technologies. Drawing on 14 case studies organized around four sites of work, this book shows how definitions of labor have been influenced by the digital technologies that employees use to produce, interpret, or process text. Incorporating methodology and theory from a range of disciplines and highlighting labor issues related to topics as diverse as census tabulation, market research, electronic games, digital archives, and 3D modeling, contributors uncover the roles played by race, class, gender, sexuality, and national politics in determining how narratives of digital labor are constructed and erased. Because each chapter is centered on the human cost of digital technologies, however, it is individual people immersed in cultures of technology who are the focus of the volume, rather than the technologies themselves. Humans at Work in the Digital Age shows how humanistic inquiry can be a valuable tool in the emerging conversation surrounding digital textual labor. As such, this book will be essential reading for academics and postgraduate students engaged in the study of digital humanities; human-computer interaction; digital culture and social justice; race, class, gender, and sexuality in digital realms; the economics of the internet; and technology in higher education.

The Anthropocene and the Humanities Carolyn Merchant, 2020-04-14 A wide-ranging and original introduction to the Anthropocene that offers fresh, theoretical insights bridging the sciences and the humanities From noted environmental historian Carolyn Merchant, this book focuses on the original concept of the Anthropocene first proposed by Paul Crutzen and Eugene Stoermer in their foundational 2000 paper. It undertakes a broad investigation into the ways in which science, technology, and the humanities can create a new and compelling awareness of human impacts on the environment. Using history, art, literature, religion, philosophy, ethics, and justice as the focal points, Merchant traces key figures and developments in the humanities throughout the Anthropocene era and explores how these disciplines might influence sustainability in the next century. Wide-ranging and accessible, this book from an eminent scholar in environmental history and philosophy argues for replacing the Age of the Anthropocene with a new Age of Sustainability.

Biophilic Urbanism Phillip James Tabb, 2020-12-20 Biophilic Urbanism provides readers with the tools to create more nature-based urban environments that are climate positive, sustainable, and healthy. The principles of biophilia are intended to support appreciation and direct engagement with nature, to responsibly utilize on-site natural resources, and to plan according to climatic conditions and local ecological processes. It seeks to create

resilient and equitable human places capable of providing critical life-support functions and a strong sense of community, and to foster experiences that raise the human spirit creating a sense of awe. Twenty-five pattern attributes are defined and explored, each of which contributes to these goals. Because of the dire necessity to respond to the COVID-19 pandemic, Biophilic Urbanism includes discussion of our need for connections, both to nature and one another, and the physical characteristics of cities and buildings relative to the contagious qualities of the air-borne virus. Case studies, found throughout the world, are presented illustrating detailed biophilic planning and design strategies. The book will be of use to practitioners and students in the fields of natural and social sciences, behavioral science and psychology, environmental engineering, health and wellness professionals, architecture, landscape architecture, interior architecture, and planning.

Building and Dwelling Richard Sennett, 2023-08-22 A reflection on the past and present of city life, and a bold proposal for its future "Constantly stimulating ideas from a veteran of urban thinking."—Jonathan Meades, *The Guardian* In this sweeping work, the preeminent sociologist Richard Sennett traces the anguished relation between how cities are built and how people live in them, from ancient Athens to twenty-first-century Shanghai. He shows how Paris, Barcelona, and New York City assumed their modern forms; rethinks the reputations of Jane Jacobs, Lewis Mumford, and others; and takes us on a tour of emblematic contemporary locations, from the backstreets of Medellín, Colombia, to Google headquarters in Manhattan. Through it all, Sennett laments that the "closed city"—segregated, regimented, and controlled—has spread from the Global North to the exploding urban centers of the Global South. He argues instead for a flexible and dynamic "open city," one that provides a better quality of life, that can adapt to climate change and challenge economic stagnation and racial separation. With arguments that speak directly to our moment—a time when more humans live in urban spaces than ever before—Sennett forms a bold and original vision for the future of cities.

Rethinking Real Estate Dror Poleg, 2019-10-31 Technology is revolutionizing the way real estate is designed, operated, and valued. It is democratizing access to capital and information, changing the way tenants use space, and eroding the power of regulation. Billions of dollars are funding these new real estate technologies and operating models. Value is shifting away from the assets themselves toward those who understand the needs of specific end-users and can use technology to deliver comprehensive, on-demand solutions. With all of these developments, there is an urgent need for a resource that helps industry practitioners think differently about their investment, customers, and competition. *Rethinking Real Estate* answers that call. It explores the impact of technology on all asset types — from retail projects, through lodging and residential properties, to office buildings and industrial facilities. Based on the author's two decades of experience working across four continents alongside the world's leading real estate investors, as well as hundreds of conversations with start-up founders and venture capitalists, this book provides practitioners with key insights, methodologies, and practical strategies to identify risks, take advantage of emerging opportunities, evaluate new competitors, and transform their organization, project, venture, or career. Whether you are an investor, developer, operator, broker, lender, facility manager, designer, planner, or technology entrepreneur, this book will help you navigate the exciting period ahead.

Art in the Age of Anxiety Omar Kholeif, 2021-01-26 Artists and writers examine the bombardment of information, misinformation, emotion, deception, and secrecy in online and offline life in the post-digital age. Every day we are bombarded by information, misinformation, emotion, deception, and secrecy in our online and offline lives. How does the never-ending flow of data affect our powers of perception and decision making? This richly illustrated and boldly designed collection of essays and artworks investigates visual culture in the post-digital age. The essays, by such leading cultural thinkers as Douglas Coupland and W. J. T. Mitchell, consider topics that range from the future of money to the role of art in a post-COVID-19 world; from mental health in the digital age to online grieving; and from the mediation of visual culture to the thickening of the digital sphere. Accompanying an ambitious exhibition conceived by the Sharjah Art Foundation and volume editor and curator Omar Kholeif, the book is a work of art and a labor of love, emulating the labyrinthine corridors of the exhibition itself. Created by a group of writers, artists, designers, photographers, and publishers, *Art in the Age of Anxiety* calls upon us to consider what our collective future will be and how humanity will adapt to it.

The Digital Factory Moritz Altenried, 2022-01-05 *The Digital Factory* reveals the hidden human labor that supports today's digital capitalism. The workers of today's digital factory include those in Amazon warehouses, delivery drivers, Chinese gaming workers, Filipino content moderators, and rural American search engine optimizers. Repetitive yet stressful, boring yet often emotionally demanding, these jobs require little formal qualification, but can demand a large degree of skills and knowledge. This work is often hidden behind the supposed magic of algorithms and thought to be automated, but it is in fact highly dependent on human labor. The workers of today's digital factory are not as far removed from a typical auto assembly line as we might think. Moritz Altenried takes us inside today's digital factories, showing that they take very different forms, including gig economy platforms, video games, and Amazon warehouses. As Altenried shows, these digital factories often share surprising similarities with factories from the industrial age. As globalized capitalism and digital technology continue to transform labor around the world, Altenried offers a timely and poignant exploration of how these changes are restructuring the social division of labor and its geographies as well as the stratifications and lines of struggle.

Knowledge and the Economy Peter Meusburger, Johannes Glückler, Martina Meskioui, 2013-05-23 The broad spectrum of topics surrounding what is termed the 'knowledge economy' has attracted increasing attention from the scientific community in recent years. The nature of knowledge-intensive industries, the spatiality of knowledge, the role of

proximity and distance in generating functional knowledge, the transfer of knowledge via networks, and the complex interplay between knowledge, location and economic development are all live academic issues. This book, the fifth volume in Springer's Knowledge and Space series, focuses on the last of these: the multiple relationships between knowledge, the economy, and space. It reflects the conceptual and methodological multidisciplinary emerging from this scholarship, yet where there has up to now been a notable lack of communication between some of the contributing disciplines, resulting in lexical and other confusions, this volume brings concord and to foster interdisciplinarity. These complications have been especially evident in our understanding of the spatiality of knowledge, the part that spatial contexts play in knowledge creation and diffusion, and the relevance of face-to-face contacts, all of which are addressed in these pages. The material here is grouped into four sections—knowledge creation and economy, knowledge and economic development, knowledge and networks, and knowledge and clusters. It assembles new concepts and original empirical research from geography, economics, sociology, international business relations, and management. The book addresses a varied audience interested in the historical and spatial foundations of the knowledge economy and is intended to bridge some of the gaps between the differing approaches to research on knowledge, the economy, and space.

The Routledge Companion to Ethics, Politics and Organizations Alison Pullen,Carl Rhodes,2015-06-05 The Routledge Companion to Ethics, Politics and Organizations synthesizes and extends existing research on ethics in organizations by explicitly focusing on 'ethico-politics' - where ethics informs political action. It draws connections between ethics and politics in and around organizations and the workplace, examines cutting-edge areas and sets the scene for future research. Through a wealth of international and multidisciplinary contributions this volume considers the broad range of ways in which ethics and politics can be conceived and understood. The chapters look at various ethical traditions, as well as the discursive deployment of ethical terminology in organizational settings, and they also examine large scale political structures and processes and how they relate to different forms of politics which affect behaviour in organizations. These many possibilities are united by a focus on how ethics can be used to inform and justify the exercise of power in organizations. This collection will be a valuable reference source for students and researchers across the disciplines of organizational studies, ethics and politics.

Google Virginia Scott,2008-10-30 It's the American dream—start a company, make a fortune, and retire early. But to become multimillionaires in their twenties, as Google founders Larry Page and Sergey Brin did, boggles the mind. All they did, after all, is come up with a better way to search for things on the Internet, right? Only in part. No company achieves a market value in the range of \$172 billion (in early 2008) based on a single good idea. This new entry in the Corporations That Changed the World series shows how Google exploited the rage for click through ads, instant news, mapping and satellite imagery, email, and more to create a high-tech behemoth that has done nothing less than change the way we work and live. Chapters in the book: • Explain the importance of the company and the essential disruptions it introduced that changed business forever. -Detail Google's origins and brief history • Present biographies of the founders and the historical context in which they launched the company. -Explain Google's strategies and innovations • Show how Google's treatment of employees—food for free, concierge services, laundry facilities, and more—set the bar high for any company eager to attract the best and brightest • Assess Google's impact on society, technology, processes, methods, etc. (Huge, considering that the company's name has become a verb in the English language!) • Show how Google beat Yahoo and other companies working hard to create a roadmap of the Internet. -Detail financial results over the years • Predict Google's future prospects and successes. In addition, author Virginia Scott offers special features that include a look at the colorful people associated with Google, interesting trivia, ethical issues and controversies, a focus on products, what its detractors have to say, and a look at where the company is headed. Google—a company that changed, and is changing, the world.
