Machine Translation: From Real Users to Research Robert E. Frederking, Kathryn B. Taylor, 2004-09-08 The previous conference in this series (AMTA 2002) took up the theme “From Research to Real Users”, and sought to explore why recent research on data-driven machine translation didn’t seem to be moving to the marketplace. As it turned out, the first commercial products of the data-driven research movement were just over the horizon, and in the intervening two years they have begun to appear in the marketplace. At the same time, rule-based machine translation systems are introducing data-driven techniques into the mix in their products. Machine translation as a software application has a 50-year history. There are an increasing number of exciting deployments of MT, many of which will be exhibited and discussed at the conference. But the scale of commercial use has never approached the estimates of the latent demand. In light of this, we reversed the question from AMTA 2002, to look at the next step in the path to commercial success for MT. We took user needs as our theme, and explored how or whether market requirements are feeding into research programs. The transition of research discoveries to practical use involves technical questions that are not as sexy as those that have driven the research community and research funding. Important product issues such as system customizability, computing resource requirements, and usability and fitness for particular tasks need to engage the creative energies of all parts of our community, especially research, as we move machine translation from a niche application to a more pervasive language conversion process. These topics were addressed at the conference through the papers contained in these proceedings, and even more specifically through several invited presentations and panels.

Applied Computational Intelligence and Mathematical Methods Radek Silhavy, Petr Silhavy, Zdenka Prokopa, 2017-09-04 The book discusses real-world problems and exploratory research in computational intelligence and mathematical models. It brings new approaches and methods to real-world problems and exploratory research that describes novel approaches in the mathematical methods, computational intelligence methods and software engineering in the scope of the intelligent systems. Advances in Blended Learning Elvis Wai Chung Leung, Fu Lee Wang, Lanfang Miao, Jianmin Zhao, Jifeng He, 2008-12-02 The Second Workshop of Blended Learning (WBL 2008), as part of the 7th International Conference on Web-Based Learning (ICWL 2008), was held in Zhejiang Normal University, Jinhua, Zhejiang, China during August 20-22, 2008. WBL 2008 provided an international forum for the dissemination of original results in the design, implementation, and evaluation of blended learning systems and related areas. In particular, the aim of WBL 2008 was to bring together researchers from academia as well as commercial developers from industry to explore ideas, exchange and share experiences, and further build the blended learning research network. The inspirations and new ideas were expected to emerge from intensive discussions during formal sessions and social activities. The main focus of WBL 2008 was on the most critical areas of blended learning, namely, ‘e-learning platforms and tools,’ ‘design, model and framework of e-learning systems,’ ‘practice and experience sharing,’ and ‘pedagogical issues.’ In total, the workshop selected 17 papers from authors of different countries for presentation and publication, a task which was not easy due to the high quality of the submitted papers. Using stringent selection criteria, submissions were rigorously reviewed based on their originality, significance, relevance, and clarity of presentation by an international program committee from Germany, Spain, UK, Italy, Ireland, Romania, Hong Kong, Japan, Taiwan, and Macao.

Advances in Automation and Robotics, Vol.2 Gary Lee, 2011-11-20 The international conference on Automation and Robotics-ICAR2011 is held during December 12-13, 2011 in Dubai, UAE. The proceedings of ICAR2011 have been published by Springer Lecture Notes in Electrical Engineering, which include 163 excellent papers selected from more than 400 submitted papers. The conference is intended to bring together the researchers and engineers/technologists working in different aspects of intelligent control systems and optimization, robotics and automation, signal processing, sensors, systems modeling and control, industrial engineering, production and management. This part of proceedings includes 82 papers contributed by many researchers in relevant topic areas covered at ICAR2011 from various countries such as France, Japan, USA, Korea and China etc. The session topic of this proceeding is signal processing and industrial engineering, production and management, which includes papers about signal reconstruction, mechanical sensors, real-time systems control system identification, change detection problems, business process modeling, production planning, scheduling and control, computer-based manufacturing technologies, systems modeling and simulation, facilities planning and management, quality control and management, precision engineering, intelligent design and manufacturing. The papers in this proceedings focus on industry engineering to promote efficiency and affect for the world, which typically showed their advanced research work recently in their various field. I am sure that discussing with many colleagues will give much more creative idea for each other on ICAR2011. The Moonshot Game Rahul Chandra, 2022-09 India’s start-up revolution began in 1998, when the first venture capitalists (VCs) arrived from the US and backed early businesses in IT services for global corporates. The second wave came in 2006 when home-grown VCs raised large amounts of capital and funded products and services companies for Indian consumers. This is a gripping behind-the-scenes story of a VC’s journey, right from the beginning of the second start-up revolution in India in 2006 until the end of the funding frenzy in 2016. A story about how global conditions, local consumers, founder ambition and good old greed shaped the start-up story in India. Rahul Chandra is the co-founder of Helion Ventures, and in this candid memoir he tells us about his journey building one of India’s oldest VC firms. In a remarkably gripping account, he recounts his adventures in India’s hyper-funded start-up ecosystem. The Moonshot Game gives readers an insight into the secret world of a VC, with unguarded stories involving large bets and big mistakes, and tales of how one juggles several investments at the same time. Rahul shows why being a VC is a constant journey of ups and downs, why building value is a long-term business, and why no amount of failure can be an excuse to lose optimism in the power of entrepreneurship.
