Design, Construction and Research Application of a Differential Electrochemical Mass Spectrometer (DEMS)

Sean James Ashton,2012-07-11 Sean Ashton's doctoral thesis, which he finished at the Technical University in Munich, describes the challenge of constructing a Differential Electrochemical Mass Spectrometer instrument (DEMS). DEMS combines an electrochemical cell with mass spectrometry via a membrane interface, allowing gaseous and volatile electrochemical reaction species to be monitored online. The thesis carefully introduces the fuel cell electrocatalyst development concerns before reviewing the pertinent literature on DEMS. This is followed by the presentation and discussion of the new extended design, including a thorough characterization of the instrument. The capabilities of the new setup are demonstrated in two research studies: The methanol oxidation reaction on Pt and PtRu catalysts, and the electrochemical corrosion of fuel cell catalyst supports. Despite both topics having long since been studied, new insights can be obtained through

Careful investigations with the new DEMS instrument that are of great, general interest. The thesis and the instrument thus show the way for future investigations in the field.

Quantitative MRI of the Spinal Cord Julien Cohen-Adad, Claudia Wheeler-Kingshott, 2014-01-16
Quantitative MRI of the Spinal Cord is the first book focused on quantitative MRI techniques with specific application to the human spinal cord. This work includes coverage of diffusion-weighted imaging, magnetization transfer imaging, relaxometry, functional MRI, and spectroscopy. Although these methods have been successfully used in the brain for the past 20 years, their application in the spinal cord remains problematic due to important acquisition challenges (such as small cross-sectional size, motion, and susceptibility artifacts). To date, there is no consensus on how to apply these techniques; this book reviews and synthesizes state-of-the-art methods so users can successfully apply them to the spinal cord. Quantitative MRI of the Spinal Cord introduces the theory behind each quantitative technique, reviews each theory's applications in the human spinal cord and describes its pros and cons, and suggests a simple protocol for applying each quantitative technique to the spinal cord. Chapters authored by international experts in the field of MRI of the spinal cord. Contains "cooking recipes"—examples of imaging parameters for each quantitative technique—designed to aid researchers and clinicians in using them in practice. Ideal for clinical settings.

**how to bring
the shabby chic
design to your
singapore home**
- Apr 26 2022
web shabby chic
is an interior
design style
that appeals to
many with its
timeless and
elegant look
incorporating
history into
your home at an
incredibly
affordable
price what sets
shabby chic
apart from
other interior
design styles
is its heavy
reliance on
furniture and
furnishings
that are either
antiques or
purposefully
distressed to
achieve
shabby chic
