These proceedings present selected research papers from CSNC2017, held during 23th-25th May in Shanghai, China. The theme of CSNC2017 is Positioning, Connecting All. These papers discuss the technologies and applications of the Global Navigation Satellite System (GNSS), and the latest progress made in the China BeiDou System (BDS) especially. They are divided into 12 topics to match the corresponding sessions in CSNC2017, which broadly covered key topics in GNSS. Readers can learn about the BDS and keep abreast of the latest advances in GNSS techniques and applications.

Performance Assessment of Two GPS Receivers on Space Shuttle National Aeronautics and Space Adm Nasa,2018-11-18 Space Shuttle STS-69 was launched on September 7, 1995, carrying the Wake Shield Facility (WSF-02) among its payloads. The mission included two GPS receivers: a Collins 3M receiver onboard the Endeavour and an Osborne flight TurboRogue, known as the TurboStar, onboard the WSF-02. Two of the WSF-02 GPS Experiment

objectives were to: (1) assess the ability to use GPS in a relative satellite positioning mode using the receivers on Endeavour and WSF-02; and (2) assess the performance of the receivers to support high precision orbit determination at the 400 km altitude. Three ground tests of the receivers were conducted in order to characterize the respective receivers. The analysis of the tests utilized the Double Differencing technique. A similar test in orbit was conducted during STS-69 while the WSF-02 was held by the Endeavour robot arm for a one hour period. In these tests, biases were observed in the double difference pseudorange measurements, implying that biases up to 140 m exist which do not cancel in double differencing. These biases appear to exist in the Collins receiver, but their effect can be mitigated by including measurement bias parameters to accommodate them in an estimation process. An additional test was conducted in which the orbit of the combined Endeavour/WSF-02 was determined independently with each receiver. These one hour arcs were based on forming double differences with 13 TurboRogue receivers in the global IGS network and estimating pseudorange biases for the Collins. Various analyses suggest the TurboStar overall orbit accuracy is about one to two meters for this period, based on double differenced phase residuals of 34 cm. These residuals indicate the level of unmodeled forces on Endeavour produced by gravitational and nongravitational effects. The rms differences between the two independently determined orbits are better than 10 meters, thereby demonstrating the accuracy of the Collins-

determined orbit at this level as well as the accuracy...

**GPS Quick Course; Technology, Systems and Operation** Lawrence Harte,Ben Levitan,2007 This book explains satellite position location technology and how the GPS system has evolved. You will learn the functional parts of GPS systems and how they work together to provide position measurements that are accurate to within centimeters. The operation of GPS is described including satellite acquisition, signal reception

and pseudo-ranging. Discover how time reference and error correction data is used and why it is very important to provide precise satellite positioning. Global positioning system is a navigation system that uses satellites to act as reference points for the calculation of position location. You will learn how GPS devices can use other systems or devices to provide location services when there is a temporary loss of a satellite links. Explained are the multiple types of civilian and military codes used in the GPS system and how they provide different levels of accuracy and reliability. GPS radio technology is described including the frequencies GPS uses, modulation and power levels. You will learn about the many applications that use GPS technology including mapping, location monitoring, agriculture control, navigation, navigation warfare (NAVWAR), surveying and structural deformation monitoring. Learn how GPS is used in combination with other position detection systems such as laser ranging to provide 3 dimensional charts and maps. The sources of GPS errors are explained such as orbital position errors and variation in radio propagation. You will learn ways to minimize the errors such as receiver initialization, RTK and differential GPS (D-GPS). A brief description of the interface and data format standards is provided. Discover the upcoming changes to GPS including a new frequency with new PRN codes. Some of the important topics covered in this book include: . Descriptions of the Functional Parts of the GPS System . How the GPS System Works . Key GPS Applications . GPS

Signal Availability and Reception . GPS Radio Technology . GPS Codes, their Accuracy and Uses . GPS Data Formats . Sources of GPS Errors and ways to Correct Them . Real Time Kinematic (RTK) GPS . Differential GPS (DGPS) . Terrestrial Based Positioning Systems . Upcoming Changes to GPS
