Model-Based Reasoning in Scientific Discovery L. Magnani, Nancy Nersessian, Paul Thagard, 1999-10-31 The volume is based on the papers that were presented at the International Conference Model-Based Reasoning in Scientific Discovery (MBR'98), held at the Collegio Ghislieri, University of Pavia, Pavia, Italy, in December 1998. The papers explore how scientific thinking uses models and explanatory reasoning to produce creative changes in theories and concepts. The study of diagnostic, visual, spatial, analogical, and temporal reasoning has demonstrated that there are many ways of performing intelligent and creative reasoning that cannot be described with the help only of traditional notions of reasoning such as classical logic. Traditional accounts of scientific reasoning have restricted the notion of reasoning primarily to deductive and inductive arguments. Understanding the contribution of modeling practices to discovery and conceptual change in science requires expanding scientific reasoning to include complex forms of creative reasoning that are not always successful and can lead to incorrect solutions. The study of these heuristic ways of reasoning is situated at the crossroads of philosophy, artificial intelligence, cognitive psychology, and logic; that is, at the heart of cognitive science. There are several key ingredients common to the various forms of model based reasoning to be considered in this book. The models are intended as interpretations of

target physical systems, processes, phenomena, or situations. The models are retrieved or constructed on the basis of potentially satisfying salient constraints of the target domain.

Planet Quest Ken Croswell,1997 The discovery of evidence of life on Mars has transformed speculation that we are not alone in our galaxy from an interesting exercise into a re-evaluation of our place in the grand sweep of the cosmos. As science and religion ponder the implications of this revelation, the discovery of five new solar systems urges consideration of even more stunning possibilities.

Columbus in Space The European Space Agency,2018-09-06 In 2008, Europe's first space laboratory was launched to the International Space Station. Ten years later, the Columbus laboratory is still circling 400 km above our heads at 28,800 km/h, providing scientists a place to

run out-of-this-world experiments on everything from cold plasma technology that will destroy unwanted odours to enzymes that may slow the ageing process. To celebrate a decade of European science and technology in space this stunning book recounts the story of the Columbus laboratory from vision to mission, revealing everything from the daily operations that keep it humming, to the cutting-edge science that takes place inside. Richly illustrated with graphics and statistics of life and research in space as well as full-colour photos, Columbus in Space offers a never-seen-before glimpse into the laboratory at the forefront of humanity's exploration of our Universe - Europe's space in space.

Prestigious Discoveries at CERN Roger Cashmore,Luciano Maiani,Jean-Pierre Revol,2013-04-18 The discoveries of neutral currents and of the W and Z bosons marked a watershed in the history of CERN. They established the validity of the electroweak theory and convinced the physicists of the importance of renormalizable non-Abelian gauge theories of the fundamental interactions. The articles collected in this book have been written by distinguished physicists who contributed in a crucial way to these developments. The book is a historical account of those discoveries and of the construction and the testing of the standard model. It also reports on the future of particle physics and provides an updated status report on the LHC and its detectors being currently built at CERN. The book addresses readers interested in particle physics including the educated public.
