components and the production of reactive oxygen species, their roles in cell signaling, cellular defense from foreign invaders, in mutagenesis leading to skin diseases including vitiligo, polymorphous light eruption and various forms of skin cancer. Then it presents the synthesis and importance of UV light and diseases, induced due to the deficiency of vitamin D. Roles of UV light in sterilization, disinfection, phototherapies are depicted in the next part and finally use and abuse of UV light in tanning salon and the availability and importance of use of UV dosimeter are highlighted. The three main focuses of this book are: - Damage to biological systems by UV light leading to certain skin diseases; most importantly skin cancers. - Importance of UV light in the in vivo synthesis of vitamin D when human bodies are exposed to it. - Diseases caused due to the deficiency of vitamin D and the use of UV lamps in phototherapy and sterilization processes. Summary of Dave Asprey's Super Human Everest Media, 2022-08-19T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 I was a normal kid with few health problems until I moved to New Mexico at the age of five. I began acquiring health problems typically seen in people much older than I was. I was well on my way to prematurely developing all four of the diseases most likely to kill you as you age: heart disease, diabetes, Alzheimer's, and cancer. #2 The Four Killers are heart disease, Alzheimer's, diabetes, and cancer. They are the second largest preventable cause of death in the United States. I was beginning to experience the symptoms of these four killers, and I needed to find a way to stop them. #3 I found out that I was highly allergic to the eight most common types of toxic mold, which explained my rapid aging. I was also beginning to show symptoms of premature aging. #4 The very powerhouses of your cells are

constantly engaged in a battle with their mortal enemy, and this fight leaves behind many casualties. When cells are under chronic stress, their mitochondria cannot make energy efficiently, leading to an increase in free radicals.
