Ultrasound of Mouse Fetal Development and Human Correlates Mary C. Peavey,Sarah K. Dotters-Katz,2021-05-05 Fetal development in the mouse is routinely and increasingly utilized for advancing translational research and medical innovation for human obstetrical care. This is the first and only manual to provide necessary content on how this should be handled for accurate and effective data collection. Detailed descriptions and examples demonstrate how researchers and clinicians can use murine fetal and obstetrical data to improve future human applications in diseases such as infertility, recurrent pregnancy loss, intrauterine fetal growth restriction, placental insufficiency, and intrauterine fetal demise, as well as organ-specific developmental disease.

Handbook of In Vivo Chemistry in Mice Katsunori Tanaka,Kenward Vong,2020-04-27 Provides timely, comprehensive coverage of in vivo chemical reactions within live animals This handbook summarizes the interdisciplinary expertise of both chemists and biologists performing in vivo chemical reactions within live animals. By comparing and contrasting currently available chemical and biological techniques, it serves not just as a collection of the pioneering work done in animal-based studies, but also as a technical guide to help readers decide which tools are suitable and best for their experimental needs. The Handbook of In Vivo Chemistry in Mice: From Lab to Living System introduces readers to general information about live animal experiments and detection methods commonly used for these animal models. It focuses on chemistry-based techniques to develop selective in vivo targeting methodologies, as well as strategies for in vivo chemistry and drug release. Topics include: currently available mouse models; biocompatible fluorophores; radionuclides for radiodiagnosis/radiotherapy; live animal imaging techniques such as positron emission tomography (PET) imaging; magnetic resonance imaging (MRI); ultrasound imaging; hybrid imaging; biocompatible chemical reactions; ligand-directed nucleophilic substitution chemistry; biorthogonal prodrug release strategies; and various selective targeting strategies for live animals. -Completely covers current techniques of in vivo chemistry performed in live animals -Describes general information about commonly used live animal experiments and detection methods -Focuses on chemistry-based techniques to develop selective in vivo targeting methodologies, as well as strategies for in vivo chemistry and drug release -Places emphasis on material properties required for the development of appropriate compounds to be used for imaging and therapeutic purposes in preclinical applications Handbook of In Vivo Chemistry in Mice: From Lab to Living System will be of great interest to pharmaceutical chemists, life scientists, and organic chemists. It will also appeal to those working in the pharmaceutical and biotechnology industries.

Morphological Mouse Phenotyping Jesus Ruberte,Ana Carretero,Marc Navarro,2017-01-27 Morphological Mouse Phenotyping: Anatomy, Histology and Imaging is an atlas of explanatory diagrams and text that guides the reader through normal mouse anatomy, histology, and imaging. The book is targeted for mouse researchers and veterinarian and human pathologists, and presents a complete, integrative description of normal mouse morphology. Disease animal models are fundamental in research to improve human health. The success of using genetically engineered mice to evaluate molecular disease hypotheses has encouraged the development of massive global projects, making the mouse the most used animal disease model. Laboratory mouse populations are straining the housing capacity of pharmaceutical and biotechnology companies, as well as public research institutions. However, the scientific community lacks sufficient expertise in morphological phenotyping to effectively characterize and validate these animal models. The mouse displays fundamental morphological similarities to humans; however, a mouse is not a man. Features more than 2,200 original images showing the anatomy, histology, and cellular structure of mouse organs Includes images specifically produced for this book in the Mouse Imaging Platform (Center for Animal Biotechnology and Gene Therapy, Universitat Autònoma de Barcelona) Offers an integrative vision of mouse morphology using correlative X-ray, computed tomography, magnetic resonance, and ultrasound images Employs classical anatomical techniques such as conventional dissection, skeletal preparations, vascular injections, and histological, immunohistochemical, and electron microscopy techniques to characterize mouse morphology
