The City that Became Safe Franklin E. Zimring, 2011-10-24 The forty-percent drop in crime that occurred across the U.S. from 1991 to 2000 remains largely an unsolved mystery. Even more puzzling is the eighty-percent drop over nineteen years in New York City. Twice as long and twice as large, it is the largest crime decline on record. In *The City That Became Safe*, Franklin E. Zimring seeks out the New York difference through a comprehensive investigation into the city's falling crime rates. The usual understanding is that aggressive police created a zero-tolerance law enforcement regime that drove crime rates down. Is this political sound bite true—are the official statistics generated by the police accurate? Though zero-tolerance policing and quality-of-life were never a consistent part of the NYPD's strategy, Zimring shows the numbers are correct and argues that some combination of more cops, new tactics, and new management can take some credit for the decline. That the police can make a difference at all in preventing crime overturns decades of conventional wisdom from criminologists, but Zimring also points out what most experts have missed: the New York experience challenges the basic assumptions driving American crime- and drug-control policies. New York has shown that crime rates can be

greatly reduced without increasing prison populations. New York teaches that targeted harm reduction strategies can drastically cut down on drug related violence even if illegal drug use remains high. And New York has proven that epidemic levels of violent crime are not hard-wired into the populations or cultures of urban America. This careful and penetrating analysis of how the nation's largest city became safe rewrites the playbook on crime and its control for all big cities.

Urban Criminology Rowland Atkinson, Gareth

Millington, 2018-11-08 Urban Criminology offers an accessible analysis of our urban condition, viewed through the prism of crime, disorder and social harm. This book gathers cutting-edge treatments, research field reports and critical examinations of crime and harm in cities, from the disciplines of urban studies and criminology. The social, economic and political composition of cities and the various inequalities that mark out and drive the problem of crime in many cities today are foregrounded. Readers follow a series of thematic engagements, generating a deeper understanding of a range of key areas that include problems of violence, social and spatial divisions, housing, policing and the role of the urban economy in issues of financial crime. This book comes

at a time of rising crime in many cities and complex responses by city administrations and communities. It presents a critical, political thesis – that crime in cities must be understood with reference to the varying social structures, political forces and economic opportunities of cities. These influences intersect to produce dramatic variations in victimisation and attempts at social control, often felt most strongly around class and gender divisions. To understand crime, we must better understand the life of the city. Urban Criminology seeks to present an integrated framework that brings to life these key issues and seeks to enthuse students of our urban condition – to locate the harms within it and to identify ways of reducing the risk of crime. This book is ideal reading for all students with an interest in cities, crime, community life, urban sociology and urban cultures.

The Urban Fabric of Crime and Fear Vania

Ceccato, 2012-06-21 How does the city's urban fabric relate to crime and fear, and how is that fabric affected by crime and fear? Does the urban environment affect one's decision to commit an offence? Is there a victimisation-related inequality within cities? How do crime and fear interrelate to inequality and segregation in cities of developing countries? What are the challenges to planning

cities which are both safe and sustainable? This book searches for answers to these questions in the nature of the city, particularly in the social interactions that take place in urban space distinctively guided by different land uses and people's activities. In other words, the book deals with the urban fabric of crime and fear. The novelty of the book is to place safety and security issues on the urban scale by (1) showing links between urban structure, and crime and fear, (2) illustrating how different disciplines deal with urban vulnerability to (and fear of) crime (3) including concrete examples of issues and challenges found in European and North American cities, and, without being too extensive, also in cities of the Global South.

The Geography of Urban Crime David T. Herbert, 1982 This book introduces the geography of urban crime by integrating the concepts of criminology with the spatial perspective that geography brings to the study of criminal behaviour. The author begins with an examination of the sources of criminological data, and their spatial dimensions, then discusses the use of geographical approaches to study both offences and offenders in their local environment.

Urban Crime Prevention, Surveillance, and Restorative Justice

Paul Knepper, Jonathan Doak, Joanna Shapland, 2009-01-15 Crime prevention, surveillance, and restorative justice have transformed the response to crime in recent years. Each has had a significant impact on policy, introducing new concepts and reassessing traditional aims and priorities. While such efforts attract a great deal of criminological interest, they tend to be discussed within separate and discrete literatures, rather than as part of a cohesive and concerted effort. *Urban Crime Prevention, Surveillance, and Restorative Justice: Effects of Social Technologies* examines these

emerging trends which are increasingly being contemplated by police, courts, and corrections agencies, and explores how these three concepts are changing national and international policies concerning crime. Going beyond the conventional methods for crime reduction The book addresses these topics within a larger framework of social technology, defined as coordinated action derived from an organized field of knowledge to achieve a particular result. It focuses on efforts aimed at reducing and responding to crime without reliance on the conventional criminal justice practices of police and prisons. The contributors discuss diffusion of knowledge about crime through media and criminological research, surveillance technologies and their effect on crime, and finally, the concept of restorative justice, with an emphasis on juvenile justice and its relationship to social regulations in general. Comprising the contributions of numerous experts in the field of criminology, the book asks What is the interaction between knowledge, planning, and social repercussions? The answer to this question forms a valuable basis from which to evaluate proposals for social improvements related to crime.

Task Force Report: Crime and Its Impact--an Assessment

United States. Task Force on Assessment of Crime, United States. Task Force on Assessment, 1967 An overview of the urban crime problem containing the results of a number of research studies and consultant papers. This volume makes use of the results of three major public surveys to examine the problem of unreported crime, public attitudes toward crime and law enforcement, the characteristics of victims and victim-offender relationships, and a variety of other crime problems. Chapters are devoted to the special problems of the economic burden of crime, white collar crime, and an appraisal of the current national system of statistical accounting on crime and criminal justice matters. There are three appendices prepared by consultants, two methodological notes and a series of tables of crime rates for index offenses by city rank.

Metropolitan Crime Patterns Robert M. Figlio, Simon Hakim, George F. Rengert, 1986 This is one the first books to examine crime trends from a metropolitan-wide perspective. Topics include: the hardening of the inner city; crime in suburbia; mobility patterns of offenders; the effect of neighbourhood characteristics on crime; variations in police expenditures, and others.

Crime in the City Lesley Williams Reid, 2003 By exploring the political and economic histories of Atlanta, Boston, Detroit, and

New Orleans, the author documents how each city experienced the demise of the industrial, welfare-state political economy and the rise of the post-industrial, absentee-state political economy and how these transformations have affected urban crime rates. In addition, those cities emphasizing criminal justice expenditures at the expense of social welfare expenditures have had more crime than those cities that did not. Political and economic conditions have influenced crime rates, in sometimes surprising ways, across the post-World War II urban landscape.

Urban Crime and Social Disorganization in China Haiyan

Xiong,2015-10-19 The book selects Guangzhou, which has the highest crime rate in China, as a research site to study patterns of crime and social disorganization. It combines methods of content analyses with ethnographic fieldwork. The research first selected 1422 crime cases reported by the influential Southern Metropolis Daily in 2013 to identify the general crime-distribution pattern. The findings suggest that both spatial and demographic-density distribution of criminal cases in Guangzhou show a gradient circle pattern from city center to suburb. Focusing on three selected typical communities, the thesis finds important patterns of crime

and social disorganization that are very different from Western research. These findings are organized according to major correlates of social disorganization, including unemployment, marriage and family, residential stability, ethnic heterogeneity, social equality, social capital, social control, social isolation and social exclusion, community cohesion, trust and fear, traditions, morals and beliefs, language. These findings extend and elaborate Social Disorganization Theory in urban China. This book can be used as a textbook for college and Ph.D. students majoring in law and sociology, as well as a reference book for professionals in related fields. Although academic, this book is written in such a way that it will also appeal to a general audience.

The Urban Public Sector and Urban Crime Daryl A. Hellman, 1980

Policing and Punishment in London 1660-1750 J. M. Beattie, Professor of History J M Beattie, 2001 This study examines the considerable changes that took place in the criminal justice system in the City of London in the century after the Restoration, well before the inauguration of the so-called 'age of reform'. The

policing institutions of the City were transformed in response to the problems created by the rapid expansion of the metropolis during the early modern period, and as a consequence of the emergence of a polite urban culture. At the same time, the City authorities were instrumental in the establishment of new forms of punishment - particularly transportation to the American colonies and confinement at hard labour - that for the first time made secondary sanctions available to the English courts for convicted felons and diminished the reliance on the terror created by capital punishment. The book investigates why in the century after 1660 the elements of an alternative means of dealing with crime in urban society were emerging in policing, in the practices and procedures of prosecution, and in the establishment of new forms of punishment.

Urban Crime Policy United States. Congress. Joint Economic Committee. Subcommittee on Economic Growth and Stabilization, 1978

Urbanization and Crime Eric A. Johnson, 2002-07-18 This 1995 book contributes to both modern German history and to the sociological understanding of crime in modern industrial and urban societies. Its central argument is that cities, in themselves, do not

cause crime. It focuses on the problems of crime and criminal justice during Germany's period of most rapid urban and industrial growth - a period when Germany also rose to world power status. From 1871 to 1914, German cities, despite massive growth, socialist agitation and non-ethnic German immigration, were not particularly infested with crime. Yet the conservative political and religious elites constantly railed against the immoral nature of the city and the German governmental authorities, police, and court officials often overreacted against city populations. In so doing, they helped to set Germany on a dangerous authoritarian course.

Urban Crime Prevention Miguel Saraiva, 2022-10-28 This book provides an original cross-thematic and wide scope review of crime prevention processes in urban areas that are explicitly based on the cooperation between different scientific and professional fields. Focusing primarily on environmental and community-based crime prevention, this book compiles a peer-reviewed collection of papers and prospective essays that explore how, and to what extent, multidisciplinary can be used as a cornerstone for achieving safer cities. Relying on the input from specialists, researchers, decision-makers, and practitioners from around the world, it covers the various stages from theory to implementation, by discussing

theoretical stances, interpreting policy and planning guidelines, uncovering unique educational experiences, and narrating insights and lessons learned from innovative research and practice. Hence, it provides vivid discussions and invaluable insights into processes of partnership building, planning, and management, oriented towards establishing successful mechanism for preventing crime and reducing feelings of insecurity in urban areas.

Violence and Theft Eric H. Monkkonen, 1992 Part of a series examining the history of crime and justice in America, this volume attempts to provide an understanding of violence in its historical context. The contributors examine criminal patterns, urban crime, collective violence and homicide.

Urban Crime Hernando Gómez Buendía, 1989 Aim of this study is the description and comparative assessment of strategies for the prevention and correction of ordinary crime in urban environments. It endeavours to analyse the accumulated cross national experience in order to help identify those strategies which appear best to combine respect for human rights.
