**Army Corps of Engineers** Denise M. Fantone, 2010-08 The U.S. Army Corps of Engineers (Corps) is the world's largest public engineering, design, and construction management agency. In FY 2006 it began incorporating performance information into its budget process, but Congress raised concerns that the criteria used by the Corps to prioritize projects are not transparent and the budget formulation process could achieve a higher return on investment. This report: (1) describes the information the Corps uses in its budget formulation process and the implications of the process; and (2) evaluates whether the President's recent budget requests for the Corps are presented so that agency priorities are clear and proposed use of funds transparent. Includes recommendations. Charts and tables.

Engineering the Organization U. S. Military, Department of Defense (DoD), U. S. Government, 2017-03-02 What is the most effective district structure to reduce cost growth of military construction projects for the United States Army Corps of Engineers? Leaders assess the requirements for the organization when designing the management structure. The structure determines how the organization manages their business processes. The current structure of the USACE districts contributes to project cost growth and additional costs to combatant commands, service component commands, and local installations. The additional project costs prevent customers from using funds for other projects, causing a hostile relationship between the customer and the district. The fear of project growth causes customers to choose different administering agents on projects where USACE does not have primacy. The USACE districts' primary function for military construction projects is project management.

Army engineer brigades also conduct project management, but experience less project growth. While the USACE matrix structure contributes to cost increases, the Army engineer brigades' hybrid structure reduces the opportunity for growth by regulating the span of control, establishing differentiation of managerial levels, horizontally integrating the employees, managing employee specialization, and centralizing control of the employees. Assessing the organizational structure through the project selection, planning, design, and execution phases demonstrates how the USACE districts could benefit from a hybrid structure like Army engineer brigades. The first chapter introduces the four most common organizational structures used today. To prevent confusion among the various theorists, the paper uses the terms functional, self-contained units, matrix, and hybrid to describe the organization types. The chapter outlines that functional organizations contain stovepipes of specialists, self-contained units benefit from having all information under a single manager, and the matrix organization uses a project manager and functional managers to control projects. Finally, it describes the idea of a hybrid organization, one that takes aspects from other organizational types and combines them to achieve the best results. Chapter Two documents how the organizations control cost growth on projects. It reviews the organizational structure of USACE districts commanded by colonels and provides insight into the USACE districts' cost growth problem. The chapter also evaluates the structure of active duty US Army engineer brigades as an example of a hybrid organization with functional advisors to the commander and self-contained organizations to develop projects and reduce cost growth. Chapter Three compares how the USACE districts and Army engineer brigades control cost growth during the selection and design of projects. It describes how the organizations distribute the processes needed during this phase. Chapter Four reviews how the organizations monitor and control projects during construction with a focus on reducing the

opportunities for project growth. The USACE districts' incorporates intricate processes during the construction phase to comply with the fiscal limits imposed by the government, while the US Army engineer brigades follow self-imposed rules to prevent cost growth during construction.

**Defense Base Act (DBA): The Federally Mandated Workers' Compensation System for Overseas Government Contractors** ,2008 Many overseas federal contractors are covered by the Defense Base Act (DBA), which mandates that they provide workers compensation insurance for their employees. As the U.S. military has increased operations in Iraq, the size of the DBA program has grown, and in 2007 over \$170 million in cash and medical benefits were paid to nearly 12,000 DBA claimants who were injured or killed while working under contract to the federal government. Congress has become increasingly concerned with the costs involved in the DBA program because the federal government usually reimburses its contractors for their DBA premiums. The Department of State (DOS) and the U.S. Agency for International Development (USAID) have seen some cost savings since adopting a single-source model for their DBA insurance in which contractors for each agency are required to purchase insurance from a single company selected by the agency. The U.S.

Army Corps of Engineers (USACE) is currently testing such a model for its DBA system. For the rest of the Department of Defense (DOD), however, including the Army's large Logistics Civil Augmentation Program (LOGCAP) contract, individual contractors are free to select their own DBA insurers and negotiate their own rates.

**Coastal Processes Assessment for Brevard County, Florida, with Special Reference to Test Plaintiffs** Nicholas C. Kraus, Mark R. Byrnes, Anne-Lise Lindquist, 1999 This report was prepared as an independent assessment of the coastal physical processes occurring along Brevard County, Florida. The study was conducted for the U.S. Department of Justice, Environment and Natural Resources Division, in its involvement with the lawsuit Applegate et al. versus the United States of America. Long-term regional beach change is evaluated by analysis of survey data on shoreline position, bathymetry, and beach profiles taken through time. In addition, analysis is specifically made for the properties of two test plaintiffs selected by the Court. Estimates of beach and dune erosion, if any, are calculated for the two test plaintiffs from date of purchase of the properties. Erosion of the beaches and dunes, principally attributed to storms, was estimated at the properties of the two test plaintiffs by compiling storm data and calculating beach and dune change with a numerical model.
